Since I was born in 1959, I missed the early days of CB. So I can't
say what it was like.

But reading old magazines, I got the impression that right from the
start, some saw it as a hobby band. I've seen articles from the time,
from Don Stoner and/or Tom Kneitel, outright talking about this new
band as a hobby band. And I've seen bits in Popular Electronics
where the FCC was sending out announcements trying to curb the hobby
useage. Both indicate that what the FCC intended for the band wasn't
necessarily what the people using the band were expecting it to be.

And there was a slow reduction in the rules. Not on the big things like input power or skip, but little things like who you could contact and a time rule that I can't really remember.

Surely, the FCC had intended the band to be a solution to a need (ie keeping in contact) where at the very least a lot of people were seeing it as a hobby, for the sake of talking on the radio.

I have no idea what was being seen out in the general public eye, but looking at the hobby electronic magazines, one really gets the impression that it was a hobby band (which doesn't have to mean DX'ing and illegal operation). Those with CB callsigns would put them after their name, just as a ham might, though for CB it was not the same sort of identifier. There were all those construction articles, and ones about getting the best signal, almost as if they wanted ham radio without the testing. Electronics Illustrated even ran a construction article or two for the Class E band (the one that was proposed for 220), even though there was no indication that the band was on the way.

> it is not for use on anything other than amatuer radio bands.

But that's the whole reason that there is a ban on 10Meter amplifiers.

There was a time when it was easy to find amplifiers being sold that
covered ten meters. They put out maybe a hundred watts, and all required
an input drive of what you'd get out of a CB set. You'd see them in
the magazines and the big catalogs, and they all had disclaimers:
"Illegal for Class D Citizens Band use". But from the context,
and the specs, you knew very well that they were being sold specifically
for CB use. If nothing else, the fact that they were on the CB pages
would be a dead giveaway.

They were selling something illegal for use, because they could claim
that it had a legal use. There was no way, because they are so close
together, to have an amplifier that would cover 10 meters and not 11.

So about 1977, when CB had become a pretty big fad and hence more
people started using it (and increasing the number of illegal amplifiers
in use, if not the percentage), your FCC put into place rules
about 10Meter amplifiers. You couldn't buy one commercially.
There were restrictions on resale. And other than general limits
on power and spurious emissions, it's the only rule for amateur
radio in the US that restricts what you can buy.

And the big joke is that the rule has nothing to do with amateur
radio, the issue wasn't hams using more power than they were allowed,
but another service and the illegal amplifiers being sold to them.

The biggest mistake, IMHO, was putting CB where it is in the sprctrum.
If it were somewhere in VHF or UHF, then "skip" wouldn't be an issue, and
there would be little to no demand for high power.

Of course given the time when that went down, it's understandable.
A 440 CB band in 1955 would have been quite a feat!

4363. Kenwood TM-541 question

I have a TM-541 that will be used as the receiver portion of a repeater. A CAS circuit needs to be built and/or purchased. CAS circuits typically require discriminator audio as input which will come from the microphone jack. Feeding it audio from the speaker jack is not recommended.

Therefore I'm looking for information on pulling out the discriminator audio from this radio and am interested in what others who have setup repeaters using this radio have done.

Thanks,
Bryan

I have worked with the newer Harris AM rigs, which use a PWM generator
driving a switching transistor like this. Each module has two output
transistors and puts out 1KW or so. You rack them up in parallel for
up to 50 KW, off the same driver stage. If one or two modules go, you
still have output (unlike with a conventional tube final obviously).
SUBSTANTIAL reduction in power bill at the transmitter site.

There WAS a CB band up in 460 MHz back then, called the Class A Citizens
Band. AM modulation. Vocaline made some nifty little transceivers.

I knew there was one, but I didn't know it dated that far back.
We had a couple guys in Hawaii, from motorola, that were using it.
6 channels IIRC, and basically they had their own private band, as nobody
else seemed to know it existed, and 2500 miles of isolation from all the
other potential users.

Brenda

It was still BS. Mostly propagated by a few individuals and even some companies that had really crappy radios and couldn't get them to clean up.

The spec USED to be 5W of INPUT power with a max of 4W out, and 12W pep. (Which is actually the same thing, just measured a bit differently). The old rating was from the days of specifying tube power, and in that case you had to measure ALL input power other than the filaments. With transistors, it was changed to just output power.

And yes, there were some real crap for CB sets that DID only put out 3 or even 2 watts of power. And couldn't even do that cleanly. But others went right to the 4w limit or even higher if they were 'tweaked'.

I had a CB set in my car back then. I ran a TRC-152 which was almost the same set as the TRC-452. The 152 was the 23 channel version, the 452 the 40 channel version. The ONLY differences were the 452 had a different power plug (with some suppression on it), suppression on the all the jacks, including the mic jack, and a VCO that the PLL would only run to about 50 channels wide. The TRC-452 VCO was an IC with a bit more gain to work reliably at 40 channels (which actually meant 45 channels 'wide' in frequency) and it would actually run about 60 or 70 channels wide. And the channel selector switch.

But, you could install the 40 channel switch from the TRC-452 on the 23 channel TRC-152 and have a '40 channel' radio that couldn't be told apart from the 452 on the air. (Well, you DID have to add a small cap and resistor on one data line...)

The 152/452's could be cranked up just over 5watt, but if someone who know what they were doing (NOT one of the asshole BOZO CB techs) put the thing on a scope and did a trapezoid adjustment you could tweak the audio compression and gain and the power and have an incredible sounding radio. I did mine on a scope and the best performance was achieved at about 3.5w. I had a guy want my radio so bad he kept offering me full price for it. I offered to set up a new 452 for him the same way, but he kept insisting that "I want YOUR radio". So I sold it to him for list price.

Again, and I can't say this strongly enough, the spec you posted was utter BS. It doesn't matter if it came from a CB set spec or not, it was BS. The 40 channel radios (from some manufacturers) were SUPERB compared to most of the 23 channel stuff that was before them. In fact, one of the best 'hack' radios ever made was the Uniden chassis 40 channel SSB set that was sold by Radio Shack as the TRC-449, TRC-457, and TRC-458, by Cobra, Uniden, and President, and even others. I know a NUMBER of HAMs that converted that to 10M and it made an incredible radio. In fact, I have 2 of those units here, converted to run as the '10M core' of my 2M SSB station. At least, they were, until I bought an Elecraft K2. (Now THAT'S a nice radio!)

If I'm not mistaken, the Class A band was restricted to licensed
communication between the 'same license'. Like different trucks for
a business. There was no provision for interbusiness communication,
or even family communication.

The 11M CB band had those same restrictions initially, but NOT on
all channels. Some channels were allowed to be 'open communications'
between different licenses.

That is a trick sometimes used by a single buyer or multiple buyers
working together. I'd especially be very suspicious if the
cancelled bid was 1) suspiciously high for the value of the item,
2) entered soon after the low 'winning' bid. Also the sooner the
bid pair is to the beginning of the auction, the more suspicious.

>
> Michael VE2BVW

Well, not quite. There is a ban on NEW amplifiers being sold by
manufacturers. They can't even be 'convertible to 11 meters.
Or even to 10M and I think the latest ruling includes even 6M,
I'd have to check.

And old amps that can cover those 'restricted' frequencies are
controlled, but NOT prohibited.

But, it is still legal for a HAM to construct his own amp that covers
any frequency. As long as he doesn't build more than a certain
number a year. (I think the current number is 2, but I'm not
sure. I'll bet someone chimes in with it though!) And, those amps
are legal to be sold.

That is not to say they can be USED on any frequency!

In fact, having an amp that can function on 11M connected to
equipment that implies it's use can be considered 'evidence of use'
if you get caught with it. Having an amp connected to, say, an
Elecraft K2 or a Yasau FT-817 if you're a HAM would NOT
be an issue. But getting caught with the same amp connected
to a Cobra 148 CB set, even if you ARE a HAM could get
you nailed. Unless you could show that the 148 was converted
to 10M...

> So why didn't you bid higher in the first place?

Because of all the idiots out there that think an online auction is
a competition. They don't know how much they want to bid, they just
want to either a) bid a bit more than you, or b) see how high they
can get you to bid.

Thanks, but no thanks to either one.

It does not matter WHEN a bid is placed. All players simply need to
bid their maximum. The ONLY thing a snipe does, is prevent the
silly one-up-manship.

> I've won many auctions without the aid of sniping software simply because I
> did put in my true maximum bid.

I did also. Then I found out how the online auction game is played.

And someone "sniping" will never unfairly win an auction from
someone who "places their maximum bid" up front. The snipe is
subject to the same rules -- whoever bids the highest maximum will
win. It does not matter when the bid is placed.

Nope. I complained about a guy that regularly sells these things and
nothing happened. He is still there months later.

Dear fellow Hams;
Before you decide to donate your hard earned radio gear.
Ask this organization for a disclosure of when & what the solicited donations/gear has been used for or donated too!
If you get NO response from them, then you know the whole organization is pure crap.
Please do not even buy his manuals which are in violation of copy right laws, that he solicits all over the WWW.
At that point, donate it to a reliable organization or sell it right here, then donate the money locally to a good cause!
Good Luck;
Brian

Good question, I imagine this is going to get you all manner of "technician as leper" responses. Heck, I'm having so much fun as a leper I can't wait to upgrade!

But, you gotta start somewhere.

About 24 hours after getting my Tech license, I figured out that I wasn't going to get much out
of the the 8:00 AM "Oatmeal Net" with guys talking about 1) the weather, and 2) their medical
problems. So I got involved with satellites. I qualified for my VUCC last week, but that's just been the trigger to say "Well, you've done all you can with a Tech license" and work in
earnest on my upgrade.

But to answer the question you actually ASKED, I guess I'd have to say "That depends"

What do you want to do? How long to you intend to sit there with your tech license before upgrading?

As far as working satellites, I got my first 115 grid squares with a VX-5R as my downlink receiver and a 2100H as my uplink transmitter. Along the way I picked up a used Icom 281H that
I thought would work for both bands, but its 440 receive was far inferior to the Yaesu HT. All
of this gear is FM only.

If I thought I was going to sit on my Tech license forever, I might have investigated a dual-
band (2M-440) all-mode rig. But I am having so much fun ALMOST being a ham, I decided to stop
buying equipment for the time being, be content with with I could do with FM stuff, then buy in
earnest when I upgrade. Looking at either a TS-2000 or an FT-847. I haven't ruled out the Icom
706 MkIIG as a lot of bang for the buck either. Any will give me what I like to do now plus what I might like to do in the future.

At the risk of sounding repetitive, the best rig for a Technician really depends on what you
plan to do with that license. If you want to put a mobile in your car and pretend it's NOT really CB, a 2100H is a great rig for the money. If you want to work tropo, satellites,

other
things many people ignore, an all-mode rig like the FT-847 is a good rig and will do some of
the things you want to do when you upgrade. A TS-2000 will do it all, but at a price. And the
706MkIIG will let you have VHF and UHF now, and HF later, all in a small package you can put in
your car if you want.

But you gotta decide where you want to be in 6 months or a year. If you are buying for NOW, get a dual band HT. If you are buying for THEN, well, you have a lot more choices.

4385. Hickok 605A meter

Whoa Mike, what's this "evidence of use" business? If that is a principle of law, then why are non-hams allowed to own ham transceivers?

What difference does it make what radio is connected to what amplifier?

I repair and refurb Heathkits, I could easily switch the crystals for one of the 10 meter slots so that an SB-101 would work on 11 meters.

In fact, I think I'll modify one of my SB-303's to cover 11 meters.

Also the last time I bought a car, the dealer did not ask to see my driver's license.

I disagree with the word "most" in that. Most were running legally in the early 70's, with only a few running illegal equipment. Of course, ten years later, all of that had slowly changed to the point where most were indeed running illegal equipment of some kind. By the end of the 80's, almost all were using some form of illegal equipment (modified radios, "tuned up" radios, amplifiers, and so on).

With now perfect 20/20 hindsight, I'm sure the FCC would probably agree. However, at the time, CB was supposed to be a business band (for truckers and such), with employees too busy working to play around with "skip." Likewise, at the time, the FCC could not have foreseen the trucking movies, and resulting CB craze, of the mid 70's. Nor did they likely suspect that millions would eventually openly flaunt the rules and regulations, using illegal equipment, and using CB for some other purpose (a hobby band). If anything, the FCC was simply too naive and trusting when they should have expected the worst behavior from most people instead.

Guess that it depends on where you were located .. I knew a bunch of the cb operators in 68 to 74 and most of them in the area did run some kind of amplifier. I used to pick up spending money by working on the equipment for them also.

If you do not have a ham license but have a CB set in your house and an amplifer that can be used with it even if it is not hooked up then that could be called evidence of use. You would seldom have any use for the amp if it was nto for illegal use. Sort of like if you have some lock picking tools and you are not a locksmith. Maybe like being out in the woods with a high power rifle when deer season is out and you try to tell ghe game warden you are rabbit hunting. In some states it is illegal to have an open container of an alcoholic beverage in the passenger area of a car. Not that you are drinking, but that is just the way the law is written.

RULE 11 - Linear Amplifiers -
{A} You may not attach the following items (power
amplifiers) to your
type accepted CB transmitter in any way:
[1] External radio frequency [RF] power amplifiers,
also called linear
amplifiers, or linears;
or
[2] Any other devices which, when used with a radio
transmitter as a
signal source, are capable of amplifying the
signal.
{B} There are no exceptions to this rule and use of
a power amplifier
voids your authority to operate the station.
{C} The FCC will presume you have used a linear or
other external [RF]
power amplifier if-
[1] It is in your possession or on your premises;
and
[2] There is OTHER EVIDENCE that you have operated
your CB station with
more power than allowed by CB Rule 10.
{D} Paragraph C above in this section does not
apply if you hold a
license in another radio service (HAM, etc.) which
allows you to operate
an external RF power amplifier.

The Amp don't have to be connected to anything at all-

Source record: 38407

Anyone have a problem installing the MRP40 evaluation program? During installation I get a message that it is about to overwrite some write-protected files. It doesn't identify what files so I have cancelled the installation. My fear is that it is going to overwrite some DLLs that may impact the operation of other programs. Any ideas?

I've always used the Icom SM-8 and still use it with the 756PRO.

> Looking for the best microphone for the Icom 765 rig.

For my money, the best SSB mics ever were the old Shure "Controlled Magnetic" mics. Try a Shure 444D (omni) or Shure 522 (cardioid).

Greetings!

6 meter ssb/cw/am rig:

I have for sale a nice TR6/AC4/MS4. Looks good, works great! It was
gone thru by Drake just prior to them closing their ham-repair
operation. I have the paperwork from Drake. I also have the manual.
$950 plus shipping, or pick up in Lincoln, Nebraska.

================== Cleaned up formatting ==

RULE 11 - Linear Amplifiers -
{A} You may not attach the following items (power amplifiers)
to your type accepted CB transmitter in any way:

[1] External radio frequency [RF] power amplifiers, also called linear
amplifiers, or linears;

or

[2] Any other devices which, when used with a radio transmitter as a
signal source, are capable of amplifying the signal.

{B} There are no exceptions to this rule and use of a power amplifier
voids your authority to operate the station.

{C} The FCC will presume you have used a linear or other external [RF]
power amplifier if-

[1] It is in your possession or on your premises;

and

[2] There is OTHER EVIDENCE that you have operated your CB station
with
more power than allowed by CB Rule 10.

{D} Paragraph C above in this section does not apply if you hold a
license in another radio service (HAM, etc.) which allows you to
operate
an external RF power amplifier.

>
> The Amp don't have to be connected to anything at all-
>

Looks like the FCC is pretty reasonable, they require "OTHER EVIDENCE".
I
suppose, field strength tests or the blue glow of corona discharge off
the ends
of the Yagi qualify.

Simply owning the amp isn't "evidence of use". While they don't want
you
to connect the amp to the transmitter, they don't spell out consequences
for
doing so.

They do spell out consequences for connecting AND using, the
consequence is
voiding the authority to operate.

Thanks.

4406. FS Mint Kenwood TS-711A All Mode with Tone

Newsgroup: rec.radio.amateur.equipment

I have for sale a mint Kenwood TS-711A 2 Meter All Mode Transceiver. This one is as new. Used very little, not a mark on it. It runs 25 watts and has the hard to find CTCSS Tone Board installed so you can select any of the Repeater Access Tones. It also comes with the Kenwood MC-48B Mic with UP/Down Buttons and 16-Key DTMF Pad. This is a $70 option. Standard equipment on this transceiver include: dual VFOs, Digital Display,40 Memories, Variable RF Output from 2 to 25 Watts, IF Shift, and Build in AC Power Supply(Operation on 12 Volts is also possible). Everything works great, including the memory backup battery. I do not have the manual, but I believe these are available to download from the internet. Price is $495 plus shipping from 79602. Thanks, Charlie Hugg, K5MBX

Sigh.....

Having been on both sides of the live auction world, and also participating in both seller and buyer roles of online auctions, I can say that when an individual puts up an item for auction, he essentially enters into a contract to sell that item via the auction process. He has sufficient time to set the parameters of that sale. If he changes his mind, he can withdraw the item before the bidding starts, but once begun, the auction continues until the item is sold or nobody wants to bid higher. In many states submitting an item to an auction does involve a legal document to this effect.

In a live auction, one can normally negotiate with the auctioneer on his fees, set a reserve price, and be there to watch the bidding if he wishes. In the event the reserve price isn't met, he can approve sale to the highest bidder anyway, or take the item and do what he will after it is released by the auctioneer.

In an online auction, many of the same elements are in place. However, there is no face to face, personal action involved. Everything is done at a relatively long distance.

Now, I fully know that there are quite a number of people that believe they can and should screw eBay any way they can for one or another reason, and they nearly always mention that eBay makes a lot of money for doing almost nothing. I don't subscribe to this argument, and believe that if an individual places an item up for auction, unless the item is found to be defective or otherwise not meeting the claims of the ad, it should remain up for auction until the agreed upon time period has elapsed. Once the auction is over, if the item hasn't sold, then the seller is free to make any deal he wishes. Yep, a deal is a deal, and if the original deal is to auction the item off, then that deal should be completed. eBay is just a vehicle, nothing more. The individuals that are participating in the deal still need to work with integrity. Unfortunately, this IS something of a moral issue, as it is indicative of how the person conducts his or her life.

There was once a day when a man's (or woman's) word was all that was needed to establish a deal. No lengthy paperwork or contracts, just a commitment and the personal will to follow through. Now, there seems to be an increasing number of individuals whose attitude is much like what I think "no@spam.com" is trying to say, who hide behind anonymous email addresses, preach "screw the world as long as I get mine", and think the world owes them something. It's funny that they are often the ones that scream the loudest when something goes against them.

It's a sad state of affairs when the number of people that have this sort of attitude increases, as it points to an overall decay of our society. To say "all's fair in love and eBay" is to sidestep the issue of personal integrity. Well, no@spam.com can do what he wants, but for myself, I will maintain my personal integrity and follow a moral code that makes my word worth something, at least to

those who do business with me.

He says all 10 "pills" are finals, but clearly the two on the left are
drivers.
I'm skeptical in many ways about the claims listed.

The coax looks like RG-58, which might handle 2kW, but I sure wouldn't bet
on it.

Also, the toroid on the output looks way undersized for2kW.
It's hard to scale the picture though, I could be wrong.

Anyone see any DC wiring that looks good for say 220A? (2kW output, so 4kW
DC input, at 18V is 220A, assuming NO droop in the supply leads.)

Taking those eight pairs of transistors on the right to be the finals,
that's 500W/Pair, or 250W each device. Not knowing what device, hard to
say, but it seems pretty dubious.

Frankly, I'd be surprised to see 1kW out of it.
Here's a real 1kW box. :)
http://www.rockwellcollins.com/ecat/gs/PA-2220A.html?smenu=4

Here's a nice article on HF amp design. Note his comments on power
requirements and efficiency.
http://www.qsl.net/ab4oj/quadra/sshfamp.html

Good views and more info on the internals of a proper design.
http://www.qsl.net/ab4oj/quadra/quadra.html#LINKS

Note there's no filtering in the picture, input or output. Likely very
dirty signals.

RG-58 will handle 800W on the AM broadcast band if you are very careful
about standing waves. It's actually kind of neat tuning the antenna system
up by feeling where the warm spots in the feedline are.

>Also, the toroid on the output looks way undersized for2kW.
>Frankly, I'd be surprised to see 1kW out of it.

Only if saturation is a problem. If you don't care about spewing huge
amounts of RFI or legality, it should be fine.

Hi,

Does anyone have pinouts for Kenwood TU-3 PL Tone Board or the board itself for sale?

Thanks.

> But you gotta decide where you want to be in 6 months or a year. If you are buying for NOW,
> get a dual band HT. If you are buying for THEN, well, you have a lot more choices.

Hi there,

I read your reply with interest. I am a newly-licensed tech class person too (for 16 days!). As a reward for my studies and for taking the FCC test, I bought myself a Yaesu VX-5R handi-talkie, which I'm getting plenty of use out of and having some fun chatting with pals on the local repeaters (my friends got me into this hobby, actually).

I figured out quite early in my studying for the FCC license that technician class is but a stepping-stone to greater breadth of bandwidth. So, it's somewhere that I'll stay for a little while, but it seems like a lot of the "fun" airwaves reside on the frequencies below where I'm authorized to transmit presently. I'm really itching to get on the HF bands as well. I've decided to do is go ahead and learn CW, but it is going to be a long, sllloooooow process for me to get to the point where I feel that my chances of passing the CW certification are good. I'm going to give myself 6 months to learn CW. I don't have much time to study, so I figure it will take at least that long to get comfy with it. After I get the CW test out of the way, I'll start studying for the General upgrade. I think I could be happy there for quite some time.

Only after I get my General class license will I reward myself by buying a base rig- the Icom 706MKIIG may be my rig of choice. I am also eyeing the Yaesu FT-100.

I've been told that I seem to be approaching this hobby backwards- that is, many people buy the rig first, then they have a good (and expensive) incentive to get their license upgrade. Me, well... I figure that a good base rig would be a nice reward for putting in the time and effort to upgrade.

For now, I'm interested in learning more about DXing on the 6 meter bands. It seems like a challenge, but one that I'm afraid my little Yaesu handi-talkie isn't quite up to.

73,

Jackie
KC0ODY

It shouldn't take anywhere close to 6 months. There are only 26 letters, 10 numbers and a few punctuation marks to learn -- and 5 wpm is real slowwww. Do a search on the web for some of the code-learning courses, or check what the ARRL sells at their web site.

Have fun...

I wonder how calling it the "Citizen's Radio" service influenced the
public's view of the band? Those good ole boys and ratchetjaws were
citizens, so it just rationally must belong to them.

Now don't forget good buddy;
Have a good day today
and a better day tomorrow!
(Must be pronounced with an Arkansas accent, even if you're from Vermont.)

Well, that obviously didn't help, did it, Ed? I wonder why they did actually call it a "Citizens Band." Did they have some other concept of "citizens" at the time (mobile business users) or was that name added sometime later?

Have to trade for a like new Drake R8B:

Drake R8, manual, box, 9.9/10 cond. a real beauty! The nicest R8 I've seen.

Drake R8A, manual, 9.5/10 cond.

Drake MS-8 speaker, excellent cond.

Will consider trading all this for an R8B and $250. All my equipment is in great shape! The R8B MUST be perfect cond. No cosmetic flaws! Satisfaction guaranteed! Items will be double boxed for shipping.

Do you intend to trade both radios for an R8B? I might consider the trade if both receivers are in excellent condition. If you want to consider sending them to me for my inspection, I'll do the trade if they are both in excellent condition. If they are not I'll ship back at my expense.

Well, it wasn't the "Citizen's Band". It had some other name, "General Mobile Radio Service" comes to mind, but maybe that was here in Canada. Whatever the term, it was first applied to that band up above 450MHz (which came first), and then you have the Class D band at 27MHz.

In a previous post, I mentioned early articles about the service treating it as a hobby band. One such article, again by either Don Stoner or Tom Kneitel, referred to it as the (or maybe "a") citizen band. The name for some reason stuck, and even from fairly early on, the only term you hear is CB. So much so that the formal name doesn't come immediately to mind.

One thing that may have happened over the years is that the formal name was changed to fit the slang. I have a vague memory of it maybe being formally being renamed at some point, precisely because everyone was calling it the citizen's band.

Be advised that Steven A. Giron, AD6GO, and EXTRA class radio amateur, (so much for the integrity of this hobby), entered into an agreement with me to sell some radio equipment for an agreed price. I promptly sent him a PAYPAL payment.

Since that time, he has not responded to the receipt of the money, nor has he answered my numerous e-mail inquiries on this matter. Of course, to date the equipment has not been received.

Steve is listed as residing at 11609 Nova Street, Santa Fe Springs, CA 90670. He did not provide a telephone number, nor is there one listed for him.

I will take the necessary steps with PAYPAL in an attempt to retrieve my money, but this is not gauranteed.

I have been buying and selling on the groups and eBay for many years, and am usually very cautious, and to date, after hundreds of transactions, have never been burned - until now.
I dealt with Steve in the past, and he was fine. Also, I always thought that being an EXTRA class ham included some integrity as well. I guess not. Additionally, his eBay feedback is good except for two neutral ratings relative to his lack of communication. So much for eBay feedback.

This is a warning NOT to deal with Steve. If anyone knows Steve, or can contact him on my behalf, I would like to speak with him on this matter.

Dan

Dan:

Sorry to hear about the rip-off! Ebay has had a LOT of legal pressure put on them for taking fraud too lightly in recent months. Perhaps the timing is right to turn the heat up on them. Also, when you register with Ebay, you are required to give a phone number, and they are supposed to confirm it. Check Ebay, they have a link where you can have the user's profile info e-mailed to you. Of course when you do this, they advise him, and also e-mail him your info, which he probably already has. Maybe when he receives this notification, he'll do what's right.

Also, PayPal would have even more ways to track him! If the money is substantial, contact the local police where he lives...give them his address.

Let us know how it goes.

I have known and done business with Mr. Giron for many years. He has
always been a "straight shooter" and as far as I am concerned his integrity
is beyond reproach. You failed to include any details in your original post

such as when did you make the purchase, how long has it been since you sent the payment, etc. However...

Mr. Giron is an advanced systems engineer for a major computer company and as such he is subject to being called out of town at a moments notice (24x7) for emergency cases. In fact, he has been out of state for the past week on such a call. I'm sure that when he returns you will be contacted regarding this matter. If not, send me a private e-mail and I'll give him a call on your behalf.

There is SOOO much wrong in this post, I will have to point all of it out...

> Be advised that Steven A. Giron, AD6GO,

Whenever you post a callsign, you are giving out all this info along with it...
Callsign:

STEVEN A GIRON
11XXX NXXX
SXXXX XX XXXXXXX, CA 9XXXX
FRN: 000382XXXX
Previously: KF6KWQ
Email: kf6XXX@XXX.XXX

Which brings up the other mistake of attaching your home address to your ham
license info.

> and EXTRA class radio amateur, (so
> much for the integrity of this hobby)

The fact that they MADE different classes instead of all being equal showed what
snobs the hobby consisted of to beging with. "I'm an Extra, WHAT? You are
only a no-code tech? You are a lazy son of a bitch and am not as good of a ham
as I am, etc. etc."

> , entered into an agreement with me to
> sell some radio equipment for an agreed price. I promptly sent him a PAYPAL
> payment.

Who the hell would use PAYPAL after all the problems that have been reported in
the news about it?!
http://www.paypalwarning.com

> Since that time, he has not responded to the receipt of the money, nor has
> he answered my numerous e-mail inquiries on this matter. Of course, to date
> the equipment has not been received.

So posting on newsgroups with all his personal info is going to somehow correct
this problem?

> Steve is listed as residing at XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX.
> He did not provide a telephone number, nor is there one listed for
> him.

Sure there is, you just don't know how to use the internet to find it. I found
yours, and see that you moved.

> I will take the necessary steps with PAYPAL in an attempt to retrieve my
> money, but this is not gauranteed.

LOL! ROTFL!
http://www.paypalwarning.com

> I dealt with Steve in the past, and he was fine.

Then perhaps he had a heart attack, although at 31 that would be unlikely, or a family emergency and was unable to get back to you yet. Perhaps his internet provider cut off their customer's service for a few weeks during an "equipment upgrade" like they always do. The fact that he has been good to deal with in the past, would make me think something bad happened to him or something.

> Also, I always thought
> that being an EXTRA class ham included some integrity as well.

Just the opposite in many cases. As an Extra, you can't go on any other bands that you can't access as a General class. The only difference is that you get to use a special private section of each of those bands that General class can not use, even though they are technically authorized to operate on the same bands and need to know the same things as they are allowed to use all the same bands as an Extra can. This is no more than belonging to an exclusive club and seem more important than the rest of the people in the hobby. Like if a fishing club had special parts around a lake reserved for Extra-special fisherman from the other LOWER-CLASS fishermen.

> I guess not.

If you would have just thought about it, you would have figured out the differences a long time ago.

> Additionally, his eBay feedback is good except for two neutral ratings
> relative to his lack of communication. So much for eBay feedback.

Even YOU said he was good to deal with, because he was. How sad if you destroy his feedback and do all this to him on the newsgroups because of something you will later find out was a tragedy he could not avoid.

> This is a warning NOT to deal with Steve. If anyone knows Steve, or can
> contact him on my behalf, I would like to speak with him on this matter.

After seeing this, I am sure he will want to speak to you too.

Perhaps he will post all of your info here for all to read after he explains that his mother died or something to that effect and was unable to contact you. (Since you too allow all your info to be easily obtained via the internet.) Perhaps he died in an auto accident. Wouldn't you feel stupid then.

I suspect what REALLY happened is that Paypal fucked you over like they do with everyone, and poor Steve is wondering why he hasn't received any money from you yet. That is the most likely thing that happened knowing about Paypal as well as I do.

Bill,

This was not an eBay transaction, but as I said, I paid him using PAYPAL.

I still had some faith in doing a deal from a newsgroup ad, as we did many years ago before eBay. Once again, more evidence as to why all the sales have gone to eBay.

I'm so thankful that the HAM radio laws are being rewritten.
That way the old farts who didn't have anything better to do back
when they grew up because of a lack of computers, education, work,
or even simple TV leaves people with very little to do, so people back
then found it much easier to sit down and learn worthless crap such as morse code
and about vacuum tubes. Now life is alot more complex. MUCH MORE COMPLEX and people
find such nonsense such as morse code as exactly that, nonsense. If I'm in danger,
I'll get on the cell phone faster thanI can grab a ham. If the cell is out, the internet,
if the internet is out, I'll grab a cop. If I can't grab a cop then I can grab just anyone.
Ham RADIO people make it sound like they are so important. Not anymore. There was a time
that you could see tons of HAM's on the street. Now you can't find them anymore when you
look for them. Why? Because like I said, life is much more complicated than it was when
HAM was becoming a several decades long fad and people didn't have anything else worth
learning
so it was quite simple. Same with out outdated educational system. Our education system
works
on the same principle that children's lives are simple and they have nothing better to do
than
get an education when we now know that children's lives are much more complex with divorce,
child
abuse and sexual abuse, latchkey kids, all that. It's amazing how children, except those
with perfect,
very boring lives, make it at all as the systems are not setup to take into consideration
that the world
is going to hell in a handbasket and most kids are freaked out and halfway insane already
by the time they
enter the first grade because they feel the world crushing in on them already from their
parent's divorces
or their uncles raping them or whatever. That is real life in this modern time.
Anyhow, now people just don't have the time to learn HAM radio on average. Those with the
time are just lucky,
it doesn't mean they are elite like the cocky SOB's act on HAM radio. The whole HAM radio
laws should be renewed.
Completely eliminate the code and match the level of complication to the same environment
ease it was back in the
old days when all these farts were getting their licenses. In other words, today, you don't
even homebrew, you just
do board level repair so on that note, our PC knowledge could apply. All we need now is
basic radio knowledge and enough
skill not to kill or give ourselves cancer from RF radiation and that's it. Either that or
HAM is going to be completely
dead once all the old farts die of cancer or heart attacks. There isn't a damned day when I
don't get on the radio and

hear of at least 5 hams who have overnight, upped and croaked. It's amazing how one night they are on HAM, the next night
they are getting buried. My point is, the world will run out of these old farts and HAM will then be dead except for a bunch of low ranking people. Why? Because no one has the time nor energy to invest so much in learning things so complicated. Also, radio shouldn't be so complicated. Our computers are much more complicated than Radio's but we learned them perfectly. There is a problem here, the problem is elitist thinking people trying to keep us normal modern people off the air because they are afraid of CB'ers coming in. CB'ers will always not get to be on HAM because they will always be too stupid. In the desire to eliminate CB people, HAM's have made the requirements so hard that they exclude everyone except again, the old farts who have too much time on their hands already.

People like you piss me off since if you dig further you will find that he might have died
or was in an accident, or something.

People like YOU who remain annonymous, do not use their real name, blame the VICTIM, and make royal asses of themselves really piss ME off. How would you suggest I DIG a little further, genius?

Most people are not bad people and most people don't
break the laws because they know the shit they will get into. Chances are, you are destroying
this guy's credibility because the poor guy got in a wreck or killed or something.

If that in fact was the case, then I will make all proper and required retractions, but I doubt it.

If he really is ripping you off then yeah, you have every right to do what you are doing
and worse! But I would really question if the guy could be in a real mess right now.

Thanks for your support.

Dan

That is not important to this discussion, and it will only provide more
fodder for boobs like "nospam" to go off topic. Suffice to say that I made
an immediate PAYPAL payment, to which he NEVER responded, and the equipment
is over due.

> Mr. Giron is an advanced systems engineer for a major computer company and
> as such he is subject to being called out of town at a moments notice

As such I am sure he has access to a computer and e-mail? A simple e-mail
as to the status of this deal would have prevented my actions here.

>In fact, he has been out of state for the past
> week on such a call.

I do not consider being away on business an excuse for NOT contacting
someone who lived up to his end of a deal and sent prompt payment,
especially a computer engineer.

>I'm sure that when he returns you will be contacted
> regarding this matter.

No good, that was not our agreement. Immediate payment = immediate
shipment.

>If not, send me a private e-mail and I'll give him a
> call on your behalf.

I sent you an e-mail.

Yup, all my high school friends owned at least two or more cb rigs.
The uniden were nice and they wanted me to buy in but I held firm and turned to ham radio instead. NO regrets.

My friend who was a very smart kid (1977) was obsessed with SWR to the point of bringing home dozen books on antenna and such. He ended up trimming a great antenna too short by chasing the dream of 1:1 swr !

I took his small gutter mounted antenna (loaded coil) and clipped it to the wrought iron railing in his living room and he could not believe how good the radio worked after that !

What if a family member that would call you at least once a week did not call you for over a month?
Would you suspect that there might be something wrong with your family member, or would you post that family member's name, address, phone number, etc. on a newsgroup and tell everyone not to ever deal with this person?

How are you sure of this? If I am not at my home or work computer, I don't have access to either. Perhaps he doesn't have a lap top either.

That's like me saying if you would have answered my phone call to you yesterday when you weren't home, I would not have shot you with a gun.

> I'll get on the cell phone faster thanI can grab a ham. If the cell is out, the internet,
> if the internet is out, I'll grab a cop.

What if the microphone on the cop's radio breaks? He uses his cell phone.
Cops, firefighters and paramedics don't learn morse code and they deal with emergency communications radios every day! If morse code had ANY value in an emergency, you can be sure that all police, firefighters and paramedics would be required to learn it. The fact that they don't, shows how unimportant it really is.

> complicated than Radio's but we learned them perfectly. There is a problem here, the problem is elitist thinking people trying to keep us normal modern people off the air because they are afraid of CB'ers coming in. CB'ers will always not get to be on HAM because they will always be too stupid.

No, CBer's are smart. They realize that you don't have to learn morse code in order to use frequencies below 6-meters. Anyone can access 11 meters without any license, or having to join a snobbish club.

Hams are afraid of CBer's coming to the ham bands because they use everyday language that is even common around the workplace today, but these old-timers don't work and don't realize that times have changed, as well as the language used. They also don't understand that the only reason the language is any different on Ham bands is because of the requirement to give your call sign every ten minutes so that everyone can know your full name and address so they can report you to the government if they find your statements offensive like good little communists. It is not the morse code that keeps the Ham bands from people speaking freely and uncensored, it is the call sign. Tech Hams didn't need to learn morse code either and you don't hear all sorts of "offensive swear words" on 2 meters either. Why? not because of the code obviously, but because you have to identify with a call sign and all the weirdos that could be listening in on scanners and such can access your private information on the internet as soon as you give your callsign.

CB is much safer. No sicko stalkers or people that go and kill people they hear that say something that they don't like because you don't identify your name and address every fucking 10 minutes!

> In the desire to eliminate CB people, HAM's have made the requirements so hard that they exclude everyone except again, the old farts who have too much time on their hands already.

Imagine if OTHER hobbies acted like this! You can't get a bowling or fishing license unless you first learn how to speak and read Russian first. If you explain that you don't understand why you have to learn Russian first in order to be able to roll a bowling ball or catch a fish, they will explain that you are just too LAZY and that it only takes 15 minutes a day, so get your ass in gear and start learning a language you will never use!

Learning Morse Code so that you can USE A MICROPHONE on HF bands is idiotic. And once again shows the human logic as being below that of the rest of the animal kingdom. Especially since you don't need to learn morse code in order to talk on 11 meters, but you do for 10 meters. This makes no fucking sense at all. They will cry that is because it is international law and there is nothing our country can do about it, everyone has to know code before being allowed to TALK on HF. When in fact they break that very international law by allowing handicapped people to use HF without having to pass a code test! Apparently it is ok to violate international law when they want to.

It's not just hams and the FCC. MOST humans are idiots. I am ashamed to be part of this idiotic race of idiots.

Of course they do. Because that way you can't post their fucking names, addresses and phone numbers on newsgroups! The fact is, only an IDIOT would use their real name on a newsgroup because of the fact that there are people like you around.

> Most people are not bad people and most people don't

> retractions, but I doubt it.

That's like a rapist apologizing to his victim afterwards. You have done damage that can not be taken back or fixed by a "retraction" or apology.

What if I beat the shit out of you everytime something bad happens to me, and then find out AFTERWARDS if you were responsible or not. If I find out you were not the cause of my problems, then I will apologize for the injuries that I caused to you and that will make everything ok.

What a messed up kid you are. This is why abortion is so necessary today.

4460. HEATHKIT APACHE TX-1 PARTS AVAILABLE

Apache Owners and rebuilders:

The following Original Apache parts are currently available:

HV transformer
HV choke
Modulation transformer
Final loading condenser
Final tuning condenser
6146 tube sockets
Modulation tubes
One pair of good 6146A tubes
VFO unit, complete
Front panel (glass cracked but easily replaced)
Meter switch
Meter
Meter gimble mount
Set of knobs (1 damaged, all others good)
Audio preamp transformers
Chassis control hardware
Drum and related assembly
Driver band switch
Final band switch

Inquire about any parts you do not see above. The main power transformer is no longer available.

Email your needs and zip code. I will respond with price, including shipping.

NO out of country shipping is available.

Cheers,

AL
K4ICL

Extras don't have any more or less integrity than anyone else.

An Extra class license is a lot like winning the blue ribbon in the FFA
or a scout merit badge. All it shows is that you put out some effort
in an area where there's an organization set up to recognize such effort.
It's just something you choose to do...or not...nobody is twisting your arm.

Just 'cause I could copy code at 20wpm, once... doesn't mean that
I'm better than anyone else. I AM better than most, but it ain't
because of the code. ;-)

I presume since this person was a ham, all hams are bad to deal with?

That's like me saying that a guy named Dan ripped me off, does that make all Dan's rip off artists.

Keep blasting the hams and "OUR" hobby, your the one that seems to have a problem. Your mixing a financial deal with a persons hobby and your wrong. One has nothing to do with the other.

Dan, you are a real lamer, and apparently, clueless. You havent even bothered to write the guy or telephone him and you are posting this drivel. Eight months ago a major internet provider went bankrupt and the folks at E-Gay had to spend a ton of effort removing derogatory input from turds like you who were either incapable or too lazy to follow-up through other channels.

Actually any use of this device would be illegal whether it be CB or
amateur radio frequencies, right Allodopeaphobia?

But then the FCC has no jurisdiction other then the USA so therefore
operation
anywhere else in the world could be possible without the worry of
jack-booted thugs
with automatic weapons kicking in the door on your jungle hut.

Of course you already knew that.....duhhhhhh......

I didn't know that they had vacuum tube technology in the question pools. I got my Advanced Class license back in 1986 or so, and these things weren't on the test back then. As for the code.....it's a piece of cake. I had no problem working up to 25 WPM after 2 months of practice. Does it make me any better than folks who didn't learn the code? No, folks are intrinsicly valuable; their self-worth is not contigent on what they know, or what they do for a living. We can thank Popular Culture for that hogwash! Now, back to the code.....the problem is that most folks try to write down what they are hearing, during the learning process. Eliminating that extra step makes it much easier to learn the code. Do I use it? Nah!
As far as being useless? I don't think so. Computers being more complicated? I doubt it. If we ever have a world disaster, a CW transmitter is the easiest thing to build. Hopefully, that won't happen!

yep. Hmm. They say we are useless. If I remeber right. The last forest fire we had. We were the only communications for a town about 200 or more Km away. We were the communications for the evactuation and standard comms for others. all the other repeaters. Cell, Fire, Ambulance, Repeater. All burnt up. Since our repeaters were more powerful then the local ones + they were on a different mountain. We were the only ones that could communicate far distances into that town. Remember. Commercial repeaters are only allowed so much wattage per area that the frequency is bought for. CB, ya right. they could and would never help another soul like US hams ever have. Yay. When 11 meter propagation is at a low. How will you communicate in a emergency ?? I wish you would explain how CB is better then amateur radio. Ya. Lots of hams lately around here are stuck up. But. Some aren't

It is clear by your response here that resolving the problem is not your
main goal. You are POed because things aren't going exactly your way. Things
happen and you should realize that. Grow up.

"nospam" <nospam@nospam.nospam> wrote in message
news:4oZr9.179$Mu4.103@nwrddc01.gnilink.net...
I'm so thankful that the HAM radio laws are being rewritten.
That way the old farts who didn't have anything better to do back
when they grew up because of a lack of computers, education, work,
or even simple TV leaves people with very little to do, so people back
then found it much easier to sit down and learn worthless crap such as morse
code
and about vacuum tubes. Now life is alot more complex. MUCH MORE COMPLEX and
people
find such nonsense such as morse code as exactly that, nonsense. If I'm in
danger,
I'll get on the cell phone faster thanI can grab a ham. If the cell is out,
the internet,
if the internet is out, I'll grab a cop. If I can't grab a cop then I can
grab just anyone.
Ham RADIO people make it sound like they are so important. Not anymore.
There was a time
that you could see tons of HAM's on the street. Now you can't find them
anymore when you
look for them. Why? Because like I said, life is much more complicated than
it was when
HAM was becoming a several decades long fad and people didn't have anything
else worth learning
so it was quite simple. Same with out outdated educational system. Our
education system works
on the same principle that children's lives are simple and they have nothing
better to do than
get an education when we now know that children's lives are much more
complex with divorce, child
abuse and sexual abuse, latchkey kids, all that. It's amazing how children,
except those with perfect,
very boring lives, make it at all as the systems are not setup to take into
consideration that the world
is going to hell in a handbasket and most kids are freaked out and halfway
insane already by the time they
enter the first grade because they feel the world crushing in on them
already from their parent's divorces
or their uncles raping them or whatever. That is real life in this modern
time.
Anyhow, now people just don't have the time to learn HAM radio on average.
Those with the time are just lucky,

it doesn't mean they are elite like the cocky SOB's act on HAM radio. The whole HAM radio laws should be renewed.
Completely eliminate the code and match the level of complication to the same environment ease it was back in the
old days when all these farts were getting their licenses. In other words, today, you don't even homebrew, you just
do board level repair so on that note, our PC knowledge could apply. All we need now is basic radio knowledge and enough
skill not to kill or give ourselves cancer from RF radiation and that's it. Either that or HAM is going to be completely
dead once all the old farts die of cancer or heart attacks. There isn't a damned day when I don't get on the radio and
hear of at least 5 hams who have overnight, upped and croaked. It's amazing how one night they are on HAM, the next night
they are getting buried. My point is, the world will run out of these old farts and HAM will then be dead except for a bunch of low ranking people. Why? Because no one has the time nor energy to invest so much in learning things so complicated. Also, radio shouldn't be so complicated. Our computers are much more complicated than Radio's but we learned them perfectly. There is a problem here, the problem is elitist thinking people trying to keep us normal modern people off the air because they are afraid of CB'ers coming in. CB'ers will always not get to be on HAM because they will always be too stupid. In the desire to eliminate CB people, HAM's have made the requirements so hard that they exclude everyone except again, the old farts who have too much time on their hands already.

This is insane logic not relevant to the matter at hand. Once again, the
american way is to blame the vicitm. I simply issued a warning to others
regarding this seller. Do with the info as you see fit, but do not blame
me.

It has been 8 days since th PAYPAL payment, without a response to the
payment, ot to my follow-up e-mails. Our agreement was that he would ship
immediately after receiving the payment. He has not. Does that rise to the
level of thief? Maybe not. Is his word any good? No. Is that someone YOU
would want to send YOUR money to?

Well, once again you are making a fool of yourself with that statement. I
am NOT a computer engineer, and with EVERY agreement I make, whether on the
groups or on eBay , I follow up with the buyer or seller every step of the

way.

> > if the internet is out, I'll grab a cop.
>
> What if the microphone on the cop's radio breaks? He uses his cell phone.
> Cops, firefighters and paramedics don't learn morse code and they deal with emergency communications radios every day! If morse code had ANY value in an emergency, you can be sure that all police, firefighters and paramedics would be required to learn it. The fact that they don't, shows how unimportant it really is.
>
> > complicated than Radio's but we learned them perfectly. There is a problem here, the problem is elitist thinking people trying to keep us normal modern people off the air because they are afraid of CB'ers coming in. CB'ers will always not get to be on HAM because they will always be too stupid.
>
> No, CBer's are smart. They realize that you don't have to learn morse code in order to use frequencies below 6-meters. Anyone can access 11 meters without any license, or having to join a snobbish club.
>
> Hams are afraid of CBer's coming to the ham bands because they use everyday language that is even common around the workplace today, but these old-timers don't work and don't realize that times have changed, as well as the language used. They also don't understand that the only reason the language is any different on Ham bands is because of the requirement to give your call sign every ten minutes so that everyone can know your full name and address so they can report you to the government if they find your statements offensive like good little communists. It is not the morse code that keeps the Ham bands from people speaking freely and uncensored, it is the call sign. Tech Hams didn't need to learn morse code either and you don't hear all sorts of "offensive swear words"
> on 2 meters either. Why? not because of the code obviously, but because you have to identify with a call sign and all the weirdos that could be listening in on scanners and such can access your private information on

the internet as soon as you give your callsign.
>
> CB is much safer. No sicko stalkers or people that go and kill people they hear that say something that they don't like because you don't identify your name and address every fucking 10 minutes!
>
> > In the desire to eliminate CB people, HAM's have made the requirements so hard that they exclude everyone except again, the old farts who have too much time on their hands already.
>
> Imagine if OTHER hobbies acted like this! You can't get a bowling or fishing license unless you first learn how to speak and read Russian first. If you explain that you don't understand why you have to learn Russian first in order to be able to roll a bowling ball or catch a fish, they will explain that you are just too LAZY and that it only takes 15 minutes a day, so get your ass in gear and start learning a language you will never use!
>
> Learning Morse Code so that you can USE A MICROPHONE on HF bands is idiotic. And once again shows the human logic as being below that of the rest of the animal kingdom. Especially since you don't need to learn morse code in order to talk on 11 meters, but you do for 10 meters. This makes no fucking sense at all. They will cry that is because it is international law and there is nothing our country can do about it, everyone has to know code before being allowed to TALK on HF. When in fact they break that very international law by allowing handicapped people to use HF without having to pass a code test! Apparently it is ok to violate international law when they want to.
>
> It's not just hams and the FCC. MOST humans are idiots. I am ashamed to be part of this idiotic race of idiots.

From: Chas <wg2a@frontiernet.net>
Message-ID: <ur1cvmej04i677@corp.supernews.com>
Source record: 38341

This is nothing new, but I have seen more of this lately. I was looking into someones feedback and noticed a complaint. Apparently this guy sold 2 books to another person and they gave him negative feedback because he charged him $9 to ship the books, the postage only came to $2.25. The seller responded that the ad said "$9 shipping and handling". I just smiled and continued to look through eBay.
The next day I saw someone auctioning a Universal M-7000 decoder and clearly stated in the ad was this: "$50 flat shipping and handling fee." $50?!! Heck, you can ship that from New York to California, UPS for about $12! $20, if you have to buy the shipping materials!! If your bidding on eBay, beware of this kind of crap. They have a right to charge it if they say it up front (unethical as it is), but this is a blatant attempt to pad their pockets. READ THE AD CAREFULLY! If they say flat fee, don't bother bidding unless it's a fair price.
I recently bought a camera from a guy 60 miles away, his ad on eBay said flat $20 fee for shipping, I thought I might get out his way in a couple of weeks and pick it up, sorry buckaroo, he only wanted to ship it, now I know why, it only cost him $6 to ship it, where did the rest go?? Right into his pocket. @#$%&!

would
> use their real name on a newsgroup because of the fact that there are
people
> like you around.

People like me? Care to explain? If a person has nothing to hide, no need
to worry about people like me....People like YOU should take care in the use
of vulgarities in a public forum where youngsters may be present.

> That's like a rapist apologizing to his victim afterwards. You have done
> damage that can not be taken back or fixed by a "retraction" or apology.

Once again, your analogy is horrific to the point of hysterical. Think
about what you said.
We are assuming A. there was a rapist, and B. there was a victim, and C. the
rape took place. Of course, under those conditions an apology would be
useless. I never said I would apologize, just retract my statements. Learn
to read.

> What if I beat the shit out of you everytime something bad happens to me,
and
> then find out AFTERWARDS if you were responsible or not. If I find out
you
> were not the cause of my problems, then I will apologize for the injuries
that I
> caused to you and that will make everything ok.

Another foolish statement. We are not talking about physical violence
here, my friend, although that seems to be where you mind and mouth are most
comfortable.

> What a messed up kid you are. This is why abortion is so necessary
today.

I am NOT a kid, pal. Your vulgar, hurtful statements to someone who was the
victim here speaks volumes about you.

No, I never said that. You drew your own conclusions from my statement.

> That's like me saying that a guy named Dan ripped me off, does that make
all
> Dan's rip off artists.

Dumb analogy, but good try.

> Keep blasting the hams and "OUR" hobby, your the one that seems to have a
> problem. Your mixing a financial deal with a persons hobby and your
wrong. One
> has nothing to do with the other.

Well, yes it does. The amateur radio hobby is a fraternity. Most hams feel
comfortable dealing with other hams as a result. An EXTRA class ham even
more so, in my opinion.
I simply felt that it was against the teachings of "our" hobby to conduct
business between two hams in the manner. Thats all.

Dan

drivel.

Hey Steve, learn to read, OK? If it is so much drivel, why did you waste
your time reading it?

If you took care to READ my post, it clearly stated that I made NUMEROUS
attempts via e-mail to contact Steve, and he did not return my inquiries.
His e-mail seemd to work fine when we were negotiating the deal, and once he
had the money, Poof! he was gone.
I tried to obtain his phone number to no avail. I did not ask for it in the
negotiation part of our deal, and maybe that was an error on my part, but I
did also state I dealt with him in the past, and trusted him.

My favorites are the ones that only ship USPS, but want to charge you double to ship to an APO/FPO. The post office charges exactly the same for APO/FPO as it does to San Francisco. I won't bid on those auctions unless it's something I really need (I'm not in a position to just wander down to a swap meet, etc. to get what I need).

Ever had your ISP go TU? How about a hard drive crash? Tends to be like
that. Works one minute then all of a sudden it doesn,t. Considering that
you, and others, have had good transactions with this guy before, I am sure
it will work out this time. When it does, we expect to see a public apology.

People tend not to realize that sometimes ALL the bands are dead. There are times when you cannot get phone communications through. I have seen these times. When you could not even hear a phone transmission, you can copy CW. CW may seem a waste to some people, but in some circumstances, it can be the ONLY way to communicate!

Literally, a box that contains pills. But, the "pills" in this instance are the semiconductors. I suppose that the typical user of these quality amplifiers must gaze upon the maze of microstrips and surface-mount components, and see only little teensie bricks and rocks and little weird round thingies, that may look vaguely like a big pill.

Ah, remember the days when marketing guys impressed us by claiming product attributes like 37 transistors, 5 diodes and two thermistors?

"The quality goes in before the name goes on.....It's a Drifter!"

4505. Need weird TS-570 plug

Newsgroup: rec.radio.amateur.equipment
Date: 2002-10-19 10:45:40 UTC
From: Karl Juul <karljuul@hotmail.com>
Message-ID: <oJas9.19037$wk6.5456606@twister.nyroc.rr.com>
Source record: 38365

I'm looking for a male plug which will fit into the external antenna tuner
socket of the Kenwood TS-570 series.
It has a rectangular shell with 6 conductors (some round, some square).

I tried the Kenwood dealer but it does not seem to be something they sell...

Any ideas?

I know. I just saw one go for $650 + shipping and without the speaker, but
I'll be happy with $550. It's real nice! Thanks!

UPS to an APO/FPO is impossible so one must use the postal service. The postage to the APO/FPO is often approaching double what UPS would charge to San Fran. Problem is the Postal Service just started a "Rate Zone" based fee system.

My solution is always to state in my auction "Buyer pays actuall shipping charges" . If they arrange pick-up, ask for it to be sent on a bus (Yep, shipped an item by Greyhound once) or what have you, they pay the actual cost and not a penny more.

Steve

In an emergency, you do not want to contact someone in a different country, they can't help you. Morse Code is of NO VALUE in an emergency or else Police, Fire, and Paramedics would be REQUIRED to learn it. Doesn't it seem odd that they are NOT required to know morse code, yet people in a HOBBY are? SURE it seems odd. Because it is odd.

Also, in an emergency, you want as MANY PEOPLE AS POSSIBLE to hear and UNDERSTAND the call for help, not just the ONE PERSON in another country who happens to understand morse code! To most people, all they hear are some beep tones and do not know it is a call for help.

If morse code had ANY purpose in an emergency or could help in just ONE way, Police officers, Fire fighters, and Paramedics would be required to learn it. They seem to be able to get through on THEIR BANDS with voice just fine.

Something to THINK about.

But if the dispatcher doesn't, it doesn't do any good.

Plus in an emergency, you want to get vital info out quickly, not send the message out in a CODE spelling out each word letter by letter so someone can die before the info ever gets decoded on the other end.

Read the below again, which you are supposed to READ before replying to. It says that you are not REQUIRED to know morse code to perform your job, it does not say that there isn't one asshole out there that does know it.

Youngsters don't have any problems with "vulgarities". They use them on the school playgrounds every fucking day. It is only adults that can be "offended" by words. Children still have not gone through enough brainwashing by society to LEARN yet that you are supposed to be "offended" by words that are in the dictionary.

I hesitate to contribute to this fray because I don't relish being flamed or lambasted with derogatory attacks on one's character that seems to typify so much of the correspondence in Newsgroups. However, here goes an ethical analysis and re-wording of Dan's message.

If I understand the sequence, Dan transmitted payment to Steve on or about Oct 10 through PayPal. Since then he has received neither the goods nor replies to repeated e-mails and has hit a deadend tracing Steve's address and phone number via his callsign. So he has good reason to be concerned that he may have lost both his money and the goods he agreed to buy.

In the interest of protecting others and in trying to trace Steve, he posts his 'BAD GUY ALERT' on Oct. 18. In that message, he links ethical behaviour with ham radio and higher ethical behaviour with the Extra class certification. The responses explode in various directions but one respondent knows Steve and states that he has been away for a week. Others say that there may be mitigating circumstances, that Dan should be more patient and that he should apologise if that is the case. Other threads spin off into debates about ham radio licensing requirements, Morse code, etc. Much verbal abuse is slung at Dan and among others. He commits to informing the Newsgroups how the deal turns out, to retracting his statements but not apologising to Steve should the deal go through with a reasonable explanation for the delay and lack of communication from Steve.

From an ethical point of view:
1. Should Dan have posted this message?
2. Does it slander Steve?
3. Does it slander others?
4. Should he have waited longer? Did he rush to judgement?
5. If Steve honours the deal and provides a reasonable explanation for the delay and lack of response, should Dan apologise to Steve through the Newsgroups?

In my view, Dan was premature with the judgemental elements of this message but the plea for help in tracking down Steve was entirely appropriate and timely; after all, he had had prompt and satisfactory dealings with him in the past. The title is over the top. Should there be a reasonable explanation for the delay, I think he should apologise for calling Steve a "BAD GUY" and for implying that Steve acted in bad faith - "never been burned - until now", "warning NOT to deal with Steve". Retraction alone is not sufficient; indeed, Steve may have legal grounds to sue Dan. Should Dan find otherwise, then no retraction or apology to Steve is warranted.

Dan's linkage of higher ethical standards than might be expected from the general population with a person's hobby or a technical certificate seems to

me to be without foundation - except where the certification contains such ethical requirements. I'm not familiar with the Extra class ham radio requirements but doubt there is any test or oath on ethics. The word 'ethics' is not indexed in the ARRL Handbook although under the paragraph entitled "Hams as World Citizens" it says, "it's a good idea to avoid sensitive political or ethical issues". Many hams are public-spirited and have virtuous ethical behaviour - some are bad apples. Dan should not have made the generalisation - his message would be better without it and it would not have elicited the spurious debate that distracts from his central concern. I don't think he has to apologise to hams for having held them in higher esteem and is now disappointed.

So here's a suggestion for how Dan might have put his first message that would be ethically appropriate for the situation. It is slanderous to no-one, is factual, and any reader can infer that they should be cautious if they are currently dealing with Steve.

<begin>
Subject: HELP - UNDELIVERED! Where's Steven A. Giron AD6GO?

Steven A. Giron, AD6GO, entered into an agreement to sell me some radio equipment for an agreed price. I promptly sent him a PAYPAL payment on Oct. 10.

Since that time, the equipment has not been received, nor has he answered my numerous e-mail inquiries on this matter. I have been buying and selling on the groups and eBay for many years, and am usually very cautious, and to date, after hundreds of transactions, have never been burned. I dealt with Steve in the past, and he was fine.

Steve is listed as residing at 11609 Nova Street, Santa Fe Springs, CA 90670. He did not provide a telephone number, nor is there one listed for him. If anyone knows Steve, or can contact him on my behalf, I would like to speak with him on this matter.

Dan
<end>

Regards,

Tom

Yea, but who was copying the code? Was he/she any good? I've heard about the PSK vs CW comparisons before I even started working PSK, but after using PSK, I don't really agree. I've found to copy a PSK signal, it has to actually be heard on the receiver. It doesn't work either, if the signal is so weak you can't hear it. Myself, I think it's about even. "I" can copy code that is every bit as weak as the weakest workable PSK signal. Maybe not everyone can, but I can. If I had to choose between the two to get a message through, it would be a toss. I'd probably go with cw. My brain has the advantage of not needing any hardware hooked up. So it can be used on any rig, at any time on any freq. I do have to say though, PSK is a good bit better at weak signal copy than rtty. Note the VLF bands where they are working "really" weak signals. Do they use PSK? Not hardly...They are using very slow morse, and then using puter programs to try to pick out the variations in noise. Also check out moonbounce. It's also very weak signal, and morse is commonly used. Haven't heard much yet about EME PSK31. But I'm not the average SWL as far as morse. I started in the 8th grade, and have had 30 + years of practice, and I peaked out at about 55-60 wpm. I'm now slowing back down again due to lack of practice, but I'm still good for 40 wpm any day. My brain picks out weak morse as well or better than my puter picks out PSK31. But like I said, not everyone is capable of this. Many hams are though. It's not like I'm special or anything. Morse capability is mainly practice, just like anything else. "A lot like typing"... I worked only CW in my first 7 years as a ham. "novice" Didn't even own a mike until I upgraded to general in 1984. MK

Naw ... you just send it as an email attachment.
Should arrive just as fast as the PayPal.

The "tantrum kid" will grow up eventually, but I wonder if he
will ever get over his whining problem. "I want it NOW and
I'll scream and whine and kick until I get it, so there!"

Did I miss the posting with an agreement about shipping terms?
First day air? Overnight? Ground? Buyer pickup?
Maybe they agreed on counter-to-counter.

According to the book "Morse Code the Essential Language", it takes the average person 30 hours of study and practice to get to 5 words per minute. Some people will take a lot less and some will take a lot more. If you've only got a few minutes per day, it could take 6 months.

I've given myself 6 months for precisely that reason- I have maybe 10
minutes or less per day to devote to CW study, and even then I won't be able
to study everyday. It may even take me longer than 6 months, but it'd have
little to do with how fast or how well I learn, and everything to do with
how much time I can devote to it. Working two jobs kinda takes a big bite
out of free time that way.

Source record: 38388

I'm studying hard for my General class. Scheduled for the exam in early December. I guess I should be starting my shopping and comparison for a transceiver. After I've centered on a radio I'll start obsessing about antennas. I don't have tons of money to buy any of the high $ deluxe jobs. I do have enough to send on quality though. I want a good "first radio" that will provide me years of service with minimum hassles. Something I can grow with. I've been reading up on the ICOM IC-718 and the Kenwood TS-570 series. They both look to be decent radios and are certainly from good companies. The EHAM.NET reviews on both of them are good. From reading through the manuals I think I'm leaning towards the Kenwood. Pricewise the ICOM looks good, but not by much.

Anyway, are there any other candidates I should consider.

Does anyone have a strong preference either way....and why.

Any url's you can point me to on these would help too.

Thanks

> PSK31 signal was error free copy...

Depends on the skill level of the person copying the CW (it was a person, not a computer -right?) and what bandwidth filters he is using. People sometimes think that PSK31 can copy signals so weak that they can't hear them with their ear. The difference is that they are listening to all the noise thru the wide filter while the PSK31 decoder is "listening" thru a very narrow filter. The PSK signal would "sound" much louder (compared to the noise) if you were listening to it after the narrow filter.

> run a ground tap from the antenna.

A trunk lip mount typically does NOT make DC ground with the trunk lid, unless you remove the paint from the point where the setscrews make contact. Many of the mounts include a small plate that the setscrews make contact with, to avoid dimpling the trunk lid, and these do NOT make DC ground.

It's always a good idea to run a piece of grounding braid (the shorter the better) to a ground screw/bolt.

To me, the product review section alone is worth the "price of admission" to the ARRL, and is available to all members. However, if you aren't an ARRL member, you can probably ask around at your local club meeting, and a member will most likely be willing to download the PDFs for you. (Or ask here, but you'll probably get a few "Why don't you just join?" responses as well...)

It's kind of like asking what is the best tool for general construction
work. I'd have to say a hammer, but then I'm no expert.
Maybe a tape measure. "They" all seem to have one.

As far as Ham radio is concerned, I would have started at the
beginning and worked my way in, listenning and studying
and learning by doing. Since the Novice ticket is history, you will
have to "succesfully infiltrate" small self-important and localized
cliques in order to be accepted, so my first choice would be a
wide range scanner, to find out what catches your attention and
sounds interesting and study them in their habitat and try to find the
best way to fit in. After that, get on the air and they can get to know
you, let down their hair, and really begin to treat you like family.

If you want to learn about ham radio from scratch, go back 20 years
and get a novice ticket and experiment on 40 and 80 CW with
homebrew or surplus equipment and have a ball meeting new people
with every contact from all around the world.

: > Does anyone make a good transceiver for all or most modes that will
: > operate in the Technician Class license bands, 6 meters and up? If not
: > what could you recommended for operation in these bands with fewest
: > number of transceivers?
:
: Good question, I imagine this is going to get you all manner of "technician as leper"
: responses. Heck, I'm having so much fun as a leper I can't wait to upgrade!
:
: But, you gotta start somewhere.
:
: About 24 hours after getting my Tech license, I figured out that I wasn't going to get
much out
: of the the 8:00 AM "Oatmeal Net" with guys talking about 1) the weather, and 2) their
medical
: problems. So I got involved with satellites. I qualified for my VUCC last week, but
that's
: just been the trigger to say "Well, you've done all you can with a Tech license" and work
in
: earnest on my upgrade.
:
: But to answer the question you actually ASKED, I guess I'd have to say "That depends"

:
: What do you want to do? How long to you intend to sit there with your tech license before
: upgrading?
:
: As far as working satellites, I got my first 115 grid squares with a VX-5R as my downlink
: receiver and a 2100H as my uplink transmitter. Along the way I picked up a used Icom 281H
that
: I thought would work for both bands, but its 440 receive was far inferior to the Yaesu
HT. All
: of this gear is FM only.
:
: If I thought I was going to sit on my Tech license forever, I might have investigated a
dual-
: band (2M-440) all-mode rig. But I am having so much fun ALMOST being a ham, I decided to
stop
: buying equipment for the time being, be content with with I could do with FM stuff, then
buy in
: earnest when I upgrade. Looking at either a TS-2000 or an FT-847. I haven't ruled out the
Icom
: 706 MkIIG as a lot of bang for the buck either. Any will give me what I like to do now
plus
: what I might like to do in the future.
:
: At the risk of sounding repetitive, the best rig for a Technician really depends on what
you
: plan to do with that license. If you want to put a mobile in your car and pretend it's
NOT
: really CB, a 2100H is a great rig for the money. If you want to work tropo, satellites,
other
: things many people ignore, an all-mode rig like the FT-847 is a good rig and will do some
of
: the things you want to do when you upgrade. A TS-2000 will do it all, but at a price. And
the
: 706MkIIG will let you have VHF and UHF now, and HF later, all in a small package you can
put in
: your car if you want.
:
: But you gotta decide where you want to be in 6 months or a year. If you are buying for
NOW,
: get a dual band HT. If you are buying for THEN, well, you have a lot more choices.
:
:

Henry 2KD Classic desktop amplifier for sale. 2 3-500 tubes, 1200 watts output on all bands (including WARCs)
This unit has recently had the ten meter modification done at the Henry factory here in the Los Angeles area.
The cabinet and front panel are in excellent condition with just a few minor dings on the top rear of the cover. All markings on the faceplate are perfect.

Asking $1050 plus shipping. I will have the Henry factory ship this unit safely to you. The weight of this unit is approximately 85 pounds. I would prefer local pickup in Southern California.

I doubt that you would go wrong with either one. I've owned HF rigs from each of the "big three" (Icom, Kenwood, and Yaesu), and found that within a class, the differences are subtle.

Icom puts their emphasis on performance.
Kenwood leans toward additional features.
Yaesu... well, they kind of run in-between. They've been lacking in innovation for some time, until they came up with their FT-817. (Which, some argue, is their response to the Elecraft K2.)

> Anyway, are there any other candidates I should consider.

Check out the Ten-Tec Jupiter (www.tentec.com). Ten-Tec goes all out for receiver performance, and the Jupiter is no exception. Many people say its receiver is almost as good as that of the Icom IC-756PRO/PROII. The IF DSP works very well. Nearly everything else is software driven, and Ten-Tec has added several features to the original radio in the form of free downloads. The Jupiter is likely to be my next rig, unless I can find a way to afford the Orion (their top of the line rig).

Only problem with the silly secnario below is that the package was never shipped at all until TODAY, 9 days after submitting a prompt PAYPAL payment, and only after being lambasted here, and a complaint filed with PAYPAL.

No Hank...

The agreement was, I pay immediately via PAYPAL, and he ships the next day.
Not too complicated for you is it?

However, as of today, 9 days after this agreement, the item still had not
been shipped.
Am I still the "tantrum kid"? Would YOU tolerate this violation of an
agreement?
Oh sorry, I guess I'm just whining. Big grown up men such as you would have
much much more patience, right?

Wrong Tom ,it was transmitted on October 9th.

Correct We had an agreement that he ship the next day, the 10th, and he did
not. Actually, as of today, 9 days later, he still had not.

So far still correct, Tom, especially the abuse slinging and name calling.

Tom, you are entitled to your viewpoint, but the history of this matter will show that "BAD GUY" title on the thread was necessary to get Steve's attention in my opinion. Please see the new thread titled UPDATE, which will explain my actions.

Regarding libel, there is NO libel if what is said is true. Once again, read the UPDATE thread and you will see what I mean. BAD GUY ALERTS and GOOD GUY ALERTS are commonly posted on the groups for the benfit of others. In my opinion, based on the way Steve handled this transaction, the BAD GUY moniker, albeit a bit harsh, was appropriate and NOT libelous. Had he NOT conducted himself poorly, and I simply made this all up, labelling him a BAD GUY, then he MAY have a cause of action. You are one of the FEW intelligent, and will written fellows here, and your response was excellent, however, in an already overly litigious society, let's not rush to lawsuits for everything. Additionally, you should go back to the law books pertaining to libel and /or slander torts.

I agree Tom, however, it was purely a personal feeling I had towards hams, and felt it factored into my level of trust for Steve. Nothing more, nothing less. I cannot help it if a boatload of anonymous boobs, hell bent on cursing and calling me vulgar names to make a point, decided to turn a simply cautionary warning into a silly ham radio debate.

> So here's a suggestion for how Dan might have put his first message that

Tom, very well put, and hindsight is always 20/20 and you make a valid
point. We are all entitled to our opinions, and the 1st ammendment
liberties of the newsgroups still allow us to post as we see fit, as long as
it is truthful. It is quite possible that your version would not have had
the same net effect as mine did, or it just might have. Pure speculation at
this juncture!

Maybe I should have you write my update!

Anyway, thanks for the intelligent input.

4557. UPDATE - RE: Steve A. Giron

Newsgroup: rec.radio.amateur.equipment
Date: 2002-10-20 02:43:29 UTC
From: Dan Conti <dconti@nj.rr.com>
Message-ID: <lLos9.24123$Up6.5328245@twister.nyc.rr.com>
Source record: 38268
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.amateur.equipment,rec.radio.shortwave,rec.radio.swap

I will preface my remarks by stating that I am appalled by the venom spewed in my direction by the majority of respondents to the topic of my initial thread here. It was also interesting to note the the majority of these responses were from posters hiding behind the veil of anonymity, using foul language and vulgar name calling.

The purpose of this post is to issue an update in this matter as to squelch further debate. The final chapter will probably not be written until Monday or Tuesday of this week, but this is briefly how it stands right now:

Last night, AFTER my PAYPAL complaint was issued, and the initial post was made here, I received an e-mail from Steve. Coincidence? Did someone from here contact him? I don't know. He stated that he was drawn away suddenly to work on a project at a secure government facility, and has been away all week. He stated that he had NO outside internet access this entire time. He did not specify as to the exact date he was drawn away, or when he returned.

Steve was very apologetic in his response.
Steve stated that he was going to reverse the PAYPAL payment to me, and also ship the equipment today, via overnight mail. All I asked of him was to ship the equipment, and I never asked for the reversal. I do not know why he chose to do that if he was shipping me the radio. He trusted that upon receipt of the radio, I would re-submit the payment to him via PAYPAL.

As of this writing, I have not received the PAYPAL reversal in my PAYPAL account.

Also, I did a US Postal tracking on the number he gave for the overnight, and once again, as of this writing, no record of the shipment.

YES, it is possible that there are delays in both items above.

Anyone contesting the facts above should contact me and I will privately e-mail you his e-mail text and the USPS tracking # he provided.

In my opinion, and that is what the newsgroups are, a bunch of opinions, the BAD GUY title was not excessive. I firmly believe that a deal is a deal, and that not having shipped, 9 days past receiving the money, WITHOUT any contact with the buyer, is BAD GUY performance, in the context in which we use GOOD GUY and BAD GUY alerts here.

Yes, there may have been a reason as to the delay, but unless the government snatched him from his house minutes after receiving my PAYPAL money, kept him off the internet, and didn't allow him out until last night, I think a short e-mail to me from him indicating the shipment would be delayed was in

order.

Those here wishing to do business in that fashion, feel free, but at least you were forewarned.

I should be receiving the radio on Monday, and of course, in fairness to Steve, I will report here under a seperate thread.

Stay tuned.....

Dan

Figure it out Dan. If you make the Pay Pal on Monday, seller does not pick up the email until tuesday. He decides to wait until the weekend, or even the following Monday to ship the item (one week, week and a half, no problem, we have lifes). You might get package two weeks or more after you did the Paypal thing.

Now, idiot, look back at all 42 responses to this thread. 41 Say you are a flaming idiot, 1 was kind of neutral and mused at the expectations.

Now raise your hand and say to the whole newsgroup "Dan Conti is a jerk"

Get a life

Steve

I'm glad that Steve came through after all, Dan. You are right in correcting my use of the word 'slanderous' and changing it to 'libelous'. I had to check my dictionary to confirm the oral versus written distinction - they are not words that I regularly use.

Also, I was not aware that BAD GUY ALERT and GOOD GUY ALERT were commonly used phrases. I did a Google search on Usenet groups and found 177 results for the former (4 related to this one about Steve) over a span of 10 years but only beginning to appear in the subject since 2000; 459 for the latter over a span of some 6 years. Curiously, the usage of BGA is almost exclusively in radio groups while GGA transcends a variety of groups. I see that you were the beneficiary of at least one GGA.

Regards,

Tom

pick
> up the email until tuesday.

PAYPAL payment made on Wednesday night, 10/9. He KNEW he would have it that night, and he did. He AGREED to ship the next day.

OK Steve, now YOU raise your little hand....can you spell AGREEMENT?

>He decides to wait until the weekend, or even
> the following Monday to ship the item (one week, week and a half, no
> problem, we have lifes). You might get package two weeks or more after
you
> did the Paypal thing.

I don't know about you, or just how much of what you just spewed you would REALLY tolerate if it was you, but I've done NUMEROUS transactions where the item is shipped the NEXT DAY after the PAYPAL payment was received, except for weekends and holidays. Using Priority Mail, I usually get it 2 to 3 days MAX from that point.

>41 Say you are a flaming idiot

Well, if you base your opinion of ME on 41 basically ANONYMOUS boobs with limited writing abilty and use of vulgarities and name calling, and you want to put yourself with THAT group, then you are not only an idiot, but a moron as well.

>I was kind of neutral and mused at the expectations.

I doubt it.

> Now raise your hand and say to the whole newsgroup "Dan Conti is a jerk"

OK Steve, I will if you also raise yours and proclaim, "Steve is a mindless fool who follows babbling idiots and does not have a mind of his own".

Dan -> hands now lowered.

No problem, Tom. They are terms quite often mis-used AND misunderstood.

Whether you agreed with me or not, it was really a pleasure to communicate
with a person who does not hide behind anonymity, use foul language or spew
vulgar names mocking one's surname of which I am very proud, as well as
being able to construct an extremely intelligent response to an issue.

Thanks again.

Dan

4564. MetroWest ProPwer 3 - Instructions?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-10-20 03:56:05 UTC
From: Dan Conti <dconti@nj.rr.com>

I recently received the MetroWest ProPower 3 charging stand included with a radio purchase. Looks like a nice unit, but the buttons are a bit confusing. Anyone have the instructions on how to use this unit? If so, a crash course on the use of this thing is appreciated.
Dan

Hi all, have some Motorola VHF 16ch. GP300's coming in next week.
They are used but will be refurbished to like-new condition and include the
charger and a NEW battery.
Bench checked and programmed to your spec's for $175 ea. plus shipping.

Acquired as trade-in on corporate system changeovers and they are not
"pieced together" or abused units.

I aim to please so they will also be guaranteed.
Money back if not satisfied (48hr. right of refusal w/refund or exchange,
barring damage to radio on your part.)

If interested or have ANY questions (especially regarding programming),
please reply direct and thanks!
Randy

Probably working on something related keeping you safe from terrorism or
national security.

So you prematurely called him a "BAD GUY" publicly. I would have waited,
then inquired on this newsgroup regarding him.

> Steve was very apologetic in his response.

So should you......here in this forum, using the subject line as you did to
him.
Say something like : "I SCREWED UP...Sorry Steve A. Giron!"

Have a good day,

Ken

it is called. get the fucking dildo out of your ass. if someone sent something ground mail. it can take up to 15 days to recieve. I have payed people for 2 day delivery and got over 20 day delivery. I myself don't have a dildo up my ass. As you seem to alway run me down on all my posts. Nomatter if they are helpful or not. I would not beleive that you have contributed to this group at all. Well besides whining, running people down and saying people don't do things they should do. You remind me of a few sales I have had. A person whining saying they payed the person money and not getting anything in return. Even though they probably didn'tsend the money. That is the advantage of a credit card. You insist he has your $$. when infact. You could. if you wanted to. Call paypal. or even say visa, mastercard. american express and say you did not even send that transaction. all 4of those. will either stop the $$ being sent. Paypal will freeze the money or refund it and take it out of the other account and so on. If you can prove you are not a loser just wanting to flame a person out ofthe blue like you do to me. Shit. I sell lots of my canadian gear to the US with 2 day courier service. I have not got 1 bad comment on ebay or elsewhere. So I don't believe you have tried to stop the payment. there are easy ways to stop it. Oh ya. you insist I am hiding and you insist onswearing by ebay. I am NEMOSWITCH no matter where you look ya baby. waaaaaaaaahhhhhh. do some searching mr FBI dude. A credit card does not have the $$ till it is final.

Who says you have to call another country? I can call anyone I like.
Ain't no gun to my head telling me I have to call Moscow...

Morse Code is of NO VALUE in an emergency or else Police, Fire,
> and Paramedics would be REQUIRED to learn it.

Sure, it's of no value to them. What would they do with it? That's
silly to even consider.
Doesn't it seem odd that they
> are NOT required to know morse code, yet people in a HOBBY are? SURE it seems
> odd. Because it is odd.

Why is it odd? Morse code has been used for years and years. Only the
newest of the hams know no code. The vast majority do. But thats not
the real reason. The real reason is it's required by international
treaty.

>
> Also, in an emergency, you want as MANY PEOPLE AS POSSIBLE to hear and
> UNDERSTAND the call for help, not just the ONE PERSON in another country who
> happens to understand morse code! To most people, all they hear are some beep
> tones and do not know it is a call for help.

Uh, duh...If I had an emergency with only a cw radio, I would call the
closest cw op to my emergency, and have him use the landline to call
help. I can't use the same frequency as the cops, or fire anyway, so
why would it even be an issue? Even if I had an FM radio, I wouldn't
use it on a PD frequency unless it was a true life/death scenario. My
radio's are not capable of xmit on their freq's anyway. I have not
unlocked them, and have no plans to. Yea, you might come back and say
you would, but I ain't you. They throw you in jail for that crap
around here.
>
> If morse code had ANY purpose in an emergency or could help in just ONE way,

> Police officers, Fire fighters, and Paramedics would be required to learn it.

Thats about the silliest thing I've ever heard. "Or read"...:/ What
in the heck would they do with code? They don't monitor shortwave
bands for emergencies. The coast guard can be summoned to the HF bands
though. I've done it myself. I ran into a sailboat in trouble on 40m
one night, and called the coast guard in Miami. They plopped right on
our frequency. I bet someone there at the coast guard station knew
code. No, we didn't use it, as the boat was SSB, but what if the boat
only had a cw rig? Or the batteries were so low, that low power cw was
the prefered route to take?
I guess unless I or someone else that knew the code, heard them, they
would be totally SOL. That would be a hell of a note. Stuck out in the
Pacific on a boat with a cw rig, and not a single person in the US
could copy them, because it became stylish to be "new tech" and
everyone dropped the code totally. That's gonna be our future in not
too many years down the line. The code is history as far as ham tests
as soon as it's dropped by treaty. That very well could be the next
WARC. Less is not more. I am a superior radio operator knowing code,
than not knowing it. Any argument to the contrary is ludicrous. I'll
save that poor cw running bastard in the sailboat. You'll let him
drown due to ignorance if you don't know the code. Thats the simple
truth. New fangled digital modes won't do you a bit of good if he
doesn't have them on the boat. And yes, I have heard one real life
emergency using CW. So it can, and does happen.

> They seem to be able to get through on THEIR BANDS with voice just fine.

Duh, no kidding...
>
> Something to THINK about.

I have better things to think about. MK

4572. FT-990 Firmware version?

Newsgroup: rec.radio.amateur.equipment

Dan,

Read past articles and its responses on "Tips on how to buy a
used shortwave radio on the Internet.", "Need Advice: I May Have Been
Ripped
Off" and "Confessions Of An Ebay/Yahoo Scam Artist" thru google search
in shortwave group. Read peoples experiences on how they deal
transactions on e-bay and learn from it. They have made good responses
to it, it will help you out next time to deal on the Internet.
Research on google groups under shortwave groups only, type the
word "beware of" and you will discover more the people to avoid doing
business on the Internet due to bad deals and complaints from buyers
or sellers.
Good Luck.

Jess

If you have any experiences either good or bad deals on buying a used shortwave radio on the Internet. Perhaps, you can share your experiences with us so it can help others to be aware of dealing with crooks who are not honest and avoid having the same mistakes as others did before. So send us your comments or suggestions so we can learn from you as much as you learn from us.
I hope you can pass the torch of this subject always, It will always be in the awareness of people who are doing business on the Internet. As as I told before the Internet is a free market, anything goes, you can deal with the good guys or the bad guys.

Jess

The questions are good ones....but the best crooks know all about them
and will have very logical and plausible answers.
If you ask if it works perfectly, there are two likely answers:
1) honest guy and it does work perfectly
2) crook sez it does, but it don't.
Over the years I've become WORSE at telling the difference.
Maybe I'm just old....maybe the crooks are getting better.

I know one honest seller with quality equipment who routinely lies
to purchasers telling them what they want to hear. The equipment
works perfectly and the buyer has no lingering doubts.
Kinda like when your girlfriend asks if those pants make her ass look big.

It makes the "sale" a lot easier if you lie a little. ;-)
mike
Bunch of stuff For Sale and Wanted at the link below.
Tek 2465, TFT projector, Transoceanic, ham radio, 30pS pulser
Tektronix Concept Books...
http://www.geocities.com/SiliconValley/Monitor/4710/
First thing you ask from the seller the following questions:

1) How does the seller purchased the unit (brand new or
used)?
2) How long is this unit been with the seller?
3) Does the seller is satisfied with the performance of the
unit?
4) Why the seller is selling the unit?
5) Ask the seller if the unit has been repaired or modified?
6) Ask the seller if he can guarantee the performance of the
unit he
is selling?
7) Ask the seller if the unit sold to you, if faulty. Can the
unit be
returned back and refund the money?
8) What mode of payment the seller wants?

Hey, I have had a radio sent to me in the UK by USPS priority Air express
that took 11 weeks. They are pathetic, and the Royal-Mail here in the UK are
just as bad, I sent a Guy a radio to Canada by surface post the estimated
time is maximun 6 weeks, after 10 weeks I contacted them only to be told it
was sitting in Birmingham airport UK (Birmingham UK is no-where near the
sea) I said how pissed of with them I was and asked why it had taken 10
weeks to travel 100 miles, and why was it at an airport when it was supposed
to go by ship. Three days later the guy received the radio in Canada,
I guess they used a speed-boat :-))
regards
GB

I have a IC-R75 Shortwave Receiver for sale. Comes with power supply, box, and manual, (no DSP). Unit is in excellent condition. $415.00 shipped via US Priority Mail. Check, MO or Paypal.

Thanks,
Fred

A couple other radios that are excellent perfomers and are dropping in price
used at the Yaesu FT-920 and Icom IC-746. The 920 is still in production
and I have seen them use for as low as $750 shipped. The 746 runs $800 -
$850 used, but you do get 2 meter. I'd suggest searching Eham.com and
QTH.com classified ads and I bet you find a good used radio.

Dan,

Don't let these fools get to you. Anytime you post something be prepared
for some fool to attack you with their vile language. Makes me wonder why
in any discourse one party feels the necessity to launch a personal attack.
Guess they learn it from the politicians, launch a personal attack because
their position is really defenseless.

Can you imagine what kind of life they must have if a post on the internet
can make them that disturbed?

Keep posting about bad experiences and let the jokers post their most
intelligent replys, they are rather humerous.

Based on "my" own experience.... If I had it to do over, I'd stick with an older rig, bought in decent condition. I've had an HW 101, I bought a brand new Kenwood TS-440S/AT. I'm not saying the new rig was bad or I don't like it. But for the money, I was just as well off with the old HW 101 and a separate General Coverage Receiver. I don't use the new one much, nor have I used half the options that came with it. As for the tuner, I will say I'm not happy with it. A waste of extra money in my book. I've been using an external tuner more often than not. As to audio, I still like the crisp crackle of the tube sets.... When I first got into Electronics at the age of 10, Transistors had already made their debut. But the ole reliable tubes still do much better I think, when it comes to audio. My opinion only. There is no way in hell, I would shell out another $1300 or so for a radio. How some of these guys have 7 or 8 pictured in their shack is beyond me. Even if I could afford that many I wouldn't "waste" the money.....You can't even work on them unless you have top notch equipment (which I have) but still, they are a pain to work on. I prefer the old stuff. Much easier to repair. Besides, the older I do get, the worse it is to see the smaller stuff. I like to be able to "see" what I'm working on..

Since you're new and just starting out on hf, it's hard to know what to recommend -- what works best for you will depend on what particular mode(s) you get interested in, what activities you like on hf, etc. Still, your instincts are pretty good -- mainstream all-mode 100-watt rigs that you can easily resell if you decide on something else.

Try http://www.aesham.com and ask that they mail their paper catalog to you. It's about 150 pages long, and lists virtually off of the currently popular ham gear and all of the accessories, etc. you'll need. Kind of a "dream-book" for radio dweebs.

It's also a good idea to subscribe to QST so you can go to http://www.arrl.org and look at the product reviews in their "members only" section. You'll have access to virtually every rig review of the past 20 years or so.

If you buy used, if from an individual, it's best to stick with someone local rather than a stranger on the internet. Or, you can go to a store like Amateur Electronic Supply or a manufacturer like Ten-Tec and get used gear that's guaranteed for 30 days, so you can return it if you don't like it.

Otherwise, I'd say just stick with the known brands -- Icom, Kenwood, Yaesu, Alinco and Ten-Tec. You can save a bit of money by going with a power supply from Astron or MFJ -- the power suppies from the radio manufacturers seem overpriced to me.

Have fun...

But it darn sure will when the bands are too dead for voice modes.If
there's any propagation at all then CW is more likely to make it
through. Of course some of the new digital modes do even better, but
require the necessary hardware, while CW does it with simple gear.

Hi, I don't know what those radios below go for but you can get a
used Yaesu FT-847, HF, 2 meters, 6 meters, 440 for around $800 - 1000.
Great radio, most bang for the buck.

Follow the link below to check it out. Good Luck and 73

You're a hypocrite, Robert.

You don't like CBers, yet you plan to act like one on 27.whatever (27.185
is 19, BTW).

IF you have a license, you should already know that actions like this,
regardless of what band they're done on, are not only against FCC rules,
but against the rules of common decency.

Can anyone tell me what one of these radios is worth used in great condition?I have an offer of a trade as they want a RCI 2950 I have and will trade me even up.He just wants a mobile and not the base.
My instincts say go for it.I know the person,and do know he keeps his equipment in mint shape.I just need to know what it is worth if I want to sell it as I may do.I don't use the 2950, and I doubt that I will use the Galaxy .Email me if you got any info that may be of help.Thanks for any help in advance.

Hi, folks.

I am still looking for the KLM 15M6 and 10M6 monobander manuals. I know there are quite a few out there who are still using them so, please, guys, do me a favor...
If you don't have time to scan or copy them, let me know and I'll arrange a FedEx pickup for you to send me the originals so I can copy them, then I'll send you the originals back. Or something. Name your price.

I'll even settle for only a diagram with measurements.

Thanks and 73 .... Zoran WA7AA

Hi OM,

I reviewed the TS-570D in a long article for eham some months ago what
received a warm appreciation (see
http://www.astrosurf.com/lombry/qsl-ts570.htm) and several other
procusts too.
I personally selected the 570 serie for its size first, then its
design and digital board and secondarily for its features (DSP
functions) as it was also for me a new one, a "test" RTX after 20
years of "off-line" doing other activities before buying something
"better" if needed. But using it for about 5 months now and in an
average of about 5-8 hours each day I can say I am very satisfied with
it and the "better RTX" will probably wait in the store for some years
or decades... until I estimate that this one is obsolete.
But I think that I will keep it all my live, even as a second RTX (or
to install in a 2d QTH) if I buy another one, a high-end one.

As stated other OMs, kenwood and icom, but even yaesu, are know to
sale excellents models, but all depends your activities and budget.
To begin read a first explanation about this on
http://www.astrosurf.com/lombry/qsl-transceiver.htm were I discuss in
one page about the utility of buying middle and high-ends RTX.

Like for all hobbies, taking my case for example and generalizing it,
I suggest you to try to answer these few questions (and more) :
- What is the time I can reserve to radio : a few or many hours each
day, each week or each month... If you have only a few hours left each
month it is maybe useless or not really necessary to invest in a high
tech rig you will switch on rarely... You will lost your money and it
will be preferable to invest in something more useful.

- What is my budget (far different from country to country, depending your socio-economical level). A TS-570D is today below $1000 but a high-end model may cost you over 3 times that value. Why ? because by definition high-ends use many features and technical design not included in low cost models.

- Can I reserve a room for this activity or not at all... ? See with your wife and maybe your kids if you are married. If you are single the problem is problably resolved as you have all the place you need, even in your car (your wife could appreciate it there to arrange her appointments on the way home)...

- As OM you need an emitting antenna system too. Do you prefer a low cost model, like a dipole (home-made or < $100) or more expensive ones like vertical or beams, or rather a mobile antenna for field or activities of various spots ? Your choice will depend of your space left and prices may vary quite a lot. You can also buy second hands antenna. But if you buy a expensive antenna, you will have less money to invest in your rig or in your P.A.

- What RTX to buy ? This is of course the main "problem"... New rigs include today many digital features and most complex ones cover all bands from HF to UHF or more (for scanners). Minus sides high-ends are also very expensive, heavy, and not really "portable"...
- So are you interested in a base station or a mobile one, in HF only (SSB or CW) or higher bands and other modes too, which require specific antennas or accessories too ? The choice of your RTX (or RTXs) - and peripherals - will depend of your answers...

- Are you fan of DXing and pile-ups or more simply by local QSO from time to time, etc ? Do you want to achieve your DXCC honor roll in one year or never ?
To excel in pile-up i.e, to be a performer you need also (usually) a performing system (RTX, procedure and antenna), even if you can reach Antarctica in QRP.
RTX side (or RX side) you need features able to extract weak signals, to isolate them from QRM or to extract signals lost below the white noise, depending your activities. You also need memories and other facilities to quick access to most used features when working pile-ups or under QRM.
So you should select e.g. rigs placing their DSP at the IF stage in place of the Audio stage (like in the TS-570D), even if some old analog model are always great performers (TS-850S, etc). But such "move" of the DSP cost a lot too... even if an Elecraft is an excellent low-cost challenger (RX side it uses one of the best DSP) even if its looks is "old-fashion" ;-).

I suggest you to read the technical reports on RTX written by users on www.eham.net, http://www.eham.net/reviews/products/14, in QST magazine or various other Ham radio magazine, and to speak with users of both low-end and high-ends rigs.

Remember also that a user (novice or advaned) having just bought a new rig will probably not recognize easily he had made a wrong choice...

4618. Need recessed mini switch

Newsgroup: rec.radio.amateur.equipment
Date: 2002-10-21 03:00:40 UTC
From: cprstn54zz@att.net

Source record: 38229

I just built a popular kit keyer only to realize after completion that it really needs a recessed 50 mA SPST mini switch for power on-off (internal alkalines) so that it won't reset or start beaconing when packed for camping. Maybe a button strapped to the inside of the back cover and actuated thru a tiny hole? Radio Shack had nothing suitable. Any recommendations?

Find a hole mount pushbutton switch and cut the stem off flush with the
threaded body.

The following items are for sale as a package (preferably to someone
who can pick them up in the Boston area):

ICOM 750 (Japanese version of the 751) with original microphone, 250hz
CW filter, 6khz AM filter, manual, Service Manual, new ROM and
battery, original box, excellent condition.
Astron RS35M 12 Volt Supply. Excellent condition.
Dentron Clipperton L Linear Amplifier with tuned input and manual.
Excellent condition.
ICOM 260A all mode two meter rig with mike and manual. Very good
condition.
Mirage 100 W. 2 meter Amplifier with preamp. Excellent condition.
Datong RF Speech processor. Excellent condition.

Take everything for $1000. (Miscellaneous extras will be thrown in.)
If interested, contact me by email.

> thread here.

You put your venom in their faces. What do you expect? They were appalled
by your venom.

Do you think you have a corner on that market? Or are you the only one that
matters?

What *should* you expect?

See comments re: personal problems, below.

> It was also interesting to note the the majority of these
> responses were from posters hiding behind the veil of anonymity, using
foul
> language and vulgar name calling.

I believe you started the namecalling with "Thief!"

Didn't you?

Did you not?

And how do we know "Dan Conti" is your name and that dconti@nj.rr.com is
your email address?

And who cares?

But it does not go unnoticed that you expanded you venomous outburt to just
about everyone that responded.

Here's a fact:

You did not make your post as any type of public service so that others
could be protected, rather it was a childish temper tantrum meant to
embarrass and damage Steve. It was mean-spirted, self-centered,
self-serving, childish, and ill-conceived.

> The purpose of this post is to issue an update in this matter as to
squelch
> further debate.

What you mean here is to squelch the criticism you rightly brought upon
yourself.

Do you always try to control everyone around you?

And, if so, why would you make a fool of yourself in public?

> The final chapter

(The "final chapter" is written everytime someone disagrees with you.)

> will probably not be written until Monday
> or Tuesday of this week, but this is briefly how it stands right now:
>
> Last night, AFTER my PAYPAL complaint was issued, and the initial post was
> made here, I received an e-mail from Steve. Coincidence? Did someone
from
> here contact him? I don't know.

We'll add that to the long list of things you don't know. That long, long
list.

> He stated that he was drawn away suddenly
> to work on a project at a secure government facility, and has been away
all
> week. He stated that he had NO outside internet access this entire time.
> He did not specify as to the exact date he was drawn away, or when he
> returned.

So?

Are you now calling him a liar?

Based on what?

And WHY?

> Steve was very apologetic in his response.

I'm sure he was.

Will you be?

You certainly haven't been yet.

> Steve stated that he was going to reverse the PAYPAL payment to me, and
also
> ship the equipment today, via overnight mail. All I asked of him was to
> ship the equipment, and I never asked for the reversal.

Did you refuse it?

Did you refuse the reversal?

Why not?

Your comment, "All I asked of him . . . .", is the most self-serving, deceitful thing you've posted yet.

Have you no shame?

Have you no notion of right and wrong?

> I do not know why
> he chose to do that if he was shipping me the radio.

To stop you from trashing him publicly?

Do ya think?

Could it be?

Don't play innocent.

It is EXACTLY the response you wanted.

You have a pathological desire for public validation. And that's why YOU reprinted it here.

> He trusted that upon
> receipt of the radio, I would re-submit the payment to him via PAYPAL.

So at least one party to this transaction shows some trust in the other person.

OK, we make a little progress.

BTW, I wouldn't trust a bit. Not on your life.

> As of this writing, I have not received the PAYPAL reversal in my PAYPAL
> account.

So what? Must the world stop and all atnetion be directed to you? Is instant gratification the only gratification you know?

Do you ever stop whining?

Are you public (government) school teacher?

> Also, I did a US Postal tracking on the number he gave for the overnight,
> and once again, as of this writing, no record of the shipment.

So what?

At least one party to this transaction has shown some trust.

Why haven't you?

WHY HAVEN'T YOU?

> YES, it is possible that there are delays in both items above.

So what?

> Anyone contesting the facts above should contact me and I will privately
> e-mail you his e-mail text and the USPS tracking # he provided.

Most people don't care about your personal problems. Problems,
incidentally, unrelated to this transaction. And you'[re the last one I
would trust to produce "facts".

> In my opinion, and that is what the newsgroups are, a bunch of opinions,
the
> BAD GUY title was not excessive.

Not in your mind. But that goes back to the personal problems not a subject
of this thread.

> I firmly believe that a deal is a deal,
> and that not having shipped, 9 days past receiving the money, WITHOUT any
> contact with the buyer, is BAD GUY performance, in the context in which we
> use GOOD GUY and BAD GUY alerts here.

What's this "we" stuff, Lindburg?

In your posts you speak for yourself, not others.

I suppose you presume to speak for others when you childish behaviour is
questioned. I'd expect no more from you.

> Yes, there may have been a reason as to the delay, but unless the
government
> snatched him from his house minutes after receiving my PAYPAL money, kept
> him off the internet, and didn't allow him out until last night, I think a
> short e-mail to me from him indicating the shipment would be delayed was
in
> order.

more important than you and your personal problems.

But you attempt at sarcasm only adds to the negatives in your column.

> Those here wishing to do business in that fashion, feel free, but at least
> you were forewarned.

(Your claim of "forewarning" is vacuous.)

I'll certainly remember not to do business with you, and will look forward
to doing business with Steve.

All as a result of your postings. Thanks for the warning.

> I should be receiving the radio on Monday, and of course, in fairness to
> Steve, I will report here under a seperate thread.

Oh, gosh, I'll hold my breath. But fairness is not one of your exhibited
traits here. Maybe you'll surprise us and apologize for your tantrum. And
if it isn't there MONDAY, we'll look forward to more venom and namecalling
from you>

> Stay tuned.............

Maybe you should reconsider your behaviour.

You're continuing to make a fool of yourself.

> Dan

Ahhh, "To Tell the Truth" another ANONYMOUS little fool spewing SO many words and saying SO little.

OK, I'll bite......let's see what words of wisdom YOU have for me on this....

> You put your venom in their faces. What do you expect? They were appalled
> by your venom.

I guess you've never seen BAD GUY Alerts on the groups before? You use the words "their" and "they". Are you now the new ANONYMOUS spokesperson for the newsgroups?

> Do you think you have a corner on that market? Or are you the only one
that
> matters?
>
> What *should* you expect?
>
> See comments re: personal problems, below.
>
> I believe you started the namecalling with "Thief!"

No , I did not. If and when you learn to read and not follow, you will know this.
Not one time did I call Steve any names, other then the initial title of the generic "Bad Guy Alert" which I stand by.

Also, in all of my responses to the posters here, not once did I ever call anyone a name, use foul language or vulgarities. Despite the nonsense thrown in my direction. We can all agree to disagree, and a good debate is healthy. The other nonsense is unnecessary, wouldn't you agree to that at least?

> Didn't you?

NO

> Did you not?

Uh, no I did not. Asked and answered.

> And how do we know "Dan Conti" is your name and that dconti@nj.rr.com is
> your email address?

#1. dumb statement in this response not worthy of a reply.

> And who cares?

Well, Mr Turth, apparently you do since you spent quite some time, thought, and effort into responding to me here. The fact that you even question it's veracity indictaes you DO care.

> But it does not go unnoticed that you expanded you venomous outburt to just
> about everyone that responded.

OK, show me just ONE example from any of my responses where I "expanded venomous outbursts" to anyone....(whatever that means. I didn't know you could expand a venomous outburst, must be fun).

> Here's a fact:
>
> You did not make your post as any type of public service so that others
> could be protected, rather it was a childish temper tantrum meant to
> embarrass and damage Steve. It was mean-spirted, self-centered,
> self-serving, childish, and ill-conceived.

#2. dumb statement. These are the FACTS according to Mr. Tell the Truth. In reality sir, it is merely your opinion of which you are of course entitled.

> What you mean here is to squelch the criticism you rightly brought upon
> yourself.

Once again, if that is how you perceive the update, knock yourself out.

> Do you always try to control everyone around you?

Yes, I do Mr. Truth...OK?

> And, if so, why would you make a fool of yourself in public?

Your opinion against which I cannot defend.

> > The final chapter

> (The "final chapter" is written everytime someone disagrees with you.)

#4. dumb statement. The one and only time I used that terminology was in the update. I thought it's meaning was pretty clear. If you and others would like, I can certainly offer many MORE chapters to the saga. I can go on and on with this mental mastrubation indefinately.

> We'll add that to the long list of things you don't know. That long, long
> list.

There you go with the "we" again. So if I understand you correctly, you and a bunch of other ANONYMOUS folk got togther, took a look at an entire litany of information, and decided as a group that there are many things I do not know. Damn, you are good.
OOpps, I forgot, add this as dumb statement #5.

> > He stated that he was drawn away suddenly
> > to work on a project at a secure government facility, and has been away
> all
> > week. He stated that he had NO outside internet access this entire
time.
> > He did not specify as to the exact date he was drawn away, or when he
> > returned.
>
> So?

Well, many folks were wondering as to what Steve's excuse was for NOT shipping AS AGREED. (Once again if you READ all of the threads you would know this). So I obliged and relayed it here. OK?

> Are you now calling him a liar?

No, never did, that's another silly conclusion YOU drew from the information.

> Based on what?

> And WHY?

These little snippets will be # 6 and # 7 dumb statements.

> > Steve was very apologetic in his response.
>
> I'm sure he was.

Well , he had reason to be. If you don't get it, YOU WILL NEVER GET IT!

> Will you be?

No, absolutely not. I did not do anything wrong, nor did I violate any terms of our agreement.

> You certainly haven't been yet.

Nor will I be...

> > Steve stated that he was going to reverse the PAYPAL payment to me, and
> also
> > ship the equipment today, via overnight mail. All I asked of him was to
> > ship the equipment, and I never asked for the reversal.
>
> Did you refuse it?

Refuse what? The radio? It is due to arrive tomorrow and I will accept it. Never got the reversal, and it is just as well. Receiving the radio will suffice.

> Did you refuse the reversal?

No. See above.

> Your comment, "All I asked of him . . . .", is the most self-serving,
> deceitful thing you've posted yet.

>
> Have you no shame?

Your posting quotes of mine out of context is the most self-serving, moronic
thing you could do as well. Have YOU no shame?

> Have you no notion of right and wrong?

I guess not, according to you and your committee.

> > I do not know why
> > he chose to do that if he was shipping me the radio.
>
> To stop you from trashing him publicly?

No, to finally fulfill his end of an agreement.

> Do ya think?
>
> Could it be?
>
> Don't play innocent.

Your cutesy attempt at an arrogant literary style asking rhetorical
questions you obviously have already answered was quaint once or twice, but
has become boring and silly in it's continuation.

> It is EXACTLY the response you wanted.
>
> You have a pathological desire for public validation. And that's why YOU
> reprinted it here.

Now Mr. Truth is a Psychologist as well?

> > He trusted that upon

>
> Are you public (government) school teacher?

Makes absolutely NO sense, and is BEYOND dumb statement.

You have become so caught up in your own unimportance here as evidneced by your rantings above which are now redudancies or previously issued attacks against me.

> > Also, I did a US Postal tracking on the number he gave for the overnight,
> > and once again, as of this writing, no record of the shipment.
>
> So what?
>
> At least one party to this transaction has shown some trust.

More redundancy, more rhetorical questions. Amazing how hateful someone can be against another whom they do not know, defending someone else whom they do not know.
Once again, blame the victim. But alas, you are absolved as you cannot help yourself.

> > YES, it is possible that there are delays in both items above.
>
> So what?

You said that once or twice already. A little writing tip : Don't keep asking silly stupid questions rhetorically, just make your statement and move on.

> > Anyone contesting the facts above should contact me and I will privately
> > e-mail you his e-mail text and the USPS tracking # he provided.
>

How did this get from Bad guy alert to a debate? Oh yeah VHF is the way to
go for emergency's, Why use HF?
Police and firefighters don't need to know CW due to the their involvement
in THEIR Radio public service. It's separate and licensing is completed thru
their respective dept. In fact most Officers have Nextel's as well as
handheld 800mhz.
Hams handle modes of communication that requires a degree of skill not
required by a Police or Fire agency.
That's why we have Ham Radio Operators!!! For a Hobby UNTIL we are called
upon for our Public Service. By whatever modes necessary.
Oh By the way next time a earthquake or something worse, That's when you
use HF.

And I've seen times when conditions were so poor and signals so very
weak, probably with some polar phase shifting, that PSK31 would not
print a single good character, but when the CW ID came along it was
completely copyable although very weak!

Get over it, so some one got ripped off. It happens every day.

These groups are about RADIOS.

Looking to sell (or swap) my TS-680S and get something that is better suited for running mobile in a small/new car. Rig is in good condition and I have manual, mic and power cable to go with it. Looking for a TS-50 or a Yaesu or Icom equiv. (same features, size and era).

Click below for specs:

For about six months now you can't retract a bid made in the last hour.

Yes, some like to sockit to you with the s+h because it is not subject to
the auction fee that ebay charges.

I had purchased a nice used ts530s and it was shipped double boxed in bubble
wrap to my door for $ 12.00 ups. Shipped from SC to NC ground, I got it
the next day ! No extra charges either. Thats the way to do business.

I never charge more then $ 1. or$ 2.00 over the actual postage or ups,
unless buyer requests insurance or faster shipment.

> > about everyone that responded.
>
> OK, show me just ONE example from any of my responses where I "expanded
> venomous outbursts" to anyone....(whatever that means. I didn't know you
> could expand a venomous outburst, must be fun).

Here is just onw example:

"I will preface my remarks by stating that I am appalled by the venom spewed in my direction by the majority of respondents to the topic of my initial thread here. It was also interesting to note the the majority of these responses were from posters hiding behind the veil of anonymity, using foul language and vulgar name calling."

> > Here's a fact:

> More redundancy, more rhetorical questions.

Neither rhetorical nor redundant.

And again, you do not answer.

> Amazing how hateful someone can
> be against another whom they do not know,

Look at your statements re: Steve.

Pot-kettle-black.

> defending someone else whom they
> do not know.

Here's where, after making a public post you object to public discussion.

Because so few people agree with you.

One would think you'd be used to that by now . . . .

> Once again, blame the victim.

You are a victim mof your own behaviour

> But alas, you are absolved as you cannot help
> yourself.

I know not to do business with you.

> > > YES, it is possible that there are delays in both items above.

Can anyone help with info on the following:

National NC-2-40S receiver.

picture at: http://www.qsl.net/g4bxd/g4bxd10/htm

Looking in Ostermans SW Rx's Past & Present, my set has the
square meter of the 40D but the round center scale of the 40C,
also, my set has only 1 h/phone jack. My set came with a
dog kennel psu, bigger than the HRO version though.

If anyone can help with any history on this set I would
be most obliged.

contact Ben, G4BXD at: G4BXD@qsl.net

> > If the bands are dead, even cw isn't going to get through.
>
> But it darn sure will when the bands are too dead for voice modes.

1) It is not getting through when the person listening on the other end doesn't understand morse code, which would be 99% of the population.

2) No bands needed for emergencies are ever "dead" for voice modes. No police officer starts using morse code because bands are not good enough for his voice to get through to the dispatcher.

3) Try calling 911 and use the touch tone pad to send morse code the next time you need help rather than talking into the phone and see what happens.

> If there's any propagation at all then CW is more likely to make it
> through.

Voice will always make it through to more people on the other end than morse code, and this is because more people understand voice, and very few of the population understand morse code. Even the military gave up on the inefficient and obsolete morse code.

> > In an emergency, you do not want to contact someone in a different country, they
> > can't help you.
>
> Who says you have to call another country?

The whole point of "bands being so bad that voice can't get through" is in relation to talking
long distances. In an emergency, you want someone close by, not in the next state or country.

> Morse Code is of NO VALUE in an emergency or else Police, Fire,
> > and Paramedics would be REQUIRED to learn it.
>
> Sure, it's of no value to them. What would they do with it? That's
> silly to even consider.

Glad you see that. Most oldtimer Hams don't.

> Doesn't it seem odd that they
> > are NOT required to know morse code, yet people in a HOBBY are? SURE it seems
> > odd. Because it is odd.
>
> Why is it odd? Morse code has been used for years and years.

And so were washboards and horses. Now we use washing machines and cars. Having been used for
years means nothing. We didn't invent microphones and speakers yet, that is why morse code was
used. The telephone quickly replaced the telegraph and no one uses their phone lines to send
morse code. Only a few nostalgic hams use morse code, no one else.

> Only the newest of the hams know no code. The vast majority do.

The MAJORITY of hams are no-code technician class! The MINORITY of hams know morse code.

> But thats not
> the real reason. The real reason is it's required by international
> treaty.

Japan seems to have no problem having hams use bands below 6 meters without learning code, and
even in the US, getting a doctor's note lets you violate these international laws for some
reason. Needless to say, international code requirement are going to finally be removed
officially next year. There is nothing you can do about it.

> > Also, in an emergency, you want as MANY PEOPLE AS POSSIBLE to hear and

> I will preface my remarks by stating that I am appalled by the venom spewed
> in my direction by the majority of respondents to the topic of my initial
> thread here.

The initial thread being your posting someone's personal information on the internet without his consent.

> It was also interesting to note the the majority of these
> responses were from posters hiding behind the veil of anonymity

After what you did with the other guy's personal info, do you really think any SMART person would reply with his real name? And why do you care so much what name someone is using to make a point here? The ONLY reason this could bother you is because you want the real identities so that you can take revenge with this info. My points made here will have no different meaning just because I am stupid and post my real name, if anything, it just shows that I would be stupid and then my points would therefore be LESS credible, not more.

> , using foul
> language and vulgar name calling.

You forgot posting people's personal information on newsgroups because you dislike them. That is a LOT WORSE than simple name calling and using words that are in the dictionary.

> The purpose of this post is to issue an update in this matter as to squelch
> further debate.

Then you are not very smart. No post can do that. The way to stop the thread is to stop posting replies. When you stop replying, the thread will die.

> Last night, AFTER my PAYPAL complaint was issued, and the initial post was
> made here, I received an e-mail from Steve. He stated that he was drawn away
> suddenly
> to work on a project at a secure government facility, and has been away all
> week.

So we were right, and you made an ass out of yourself.

> He stated that he had NO outside internet access this entire time.
> He did not specify as to the exact date he was drawn away, or when he
> returned.
>
> Steve was very apologetic in his response.
> Steve stated that he was going to reverse the PAYPAL payment to me, and also
> ship the equipment today, via overnight mail.

And now there is no way you can undo the posting of his personal information. You will get your item and your life will be just fine, meanwhile the damage you did to poor steve will be around on usenet search engines for many many years to come.

Did you mention to him what you did here on the newsgroups? Please let us know how he responded to you telling him this.

Dear Mr. Truth :

For your information, pointing out DUMB statements, is NOT name calling, but simply a reflection upon the infomration you provided.

The rest of your diatribe here is simply trash, redundant,and not worthy of a continued waste of time.

Dan

Well, you *say* you're not anonymous, but you are, nonetheless, a malcontent
and schoolyard bully.

Do you think the malcontent schoolyard bully cares?

He cares about only himself in his warped view of the world.

Period.

In rec.radio.shortwave THINK! <think@hotmail.com> wrote:

> The MAJORITY of hams are no-code technician class! The MINORITY of hams know morse code.

WRONG! There are more Techs than any other single class, but still far
from a majority. See ham census data below from qrz.com:

http://www.qrz.com/i/census.html?

BTW, many Tech Plus (passed code) hams have been reclassified as Tech by
the FCC when they renew because the FCC no longer wants to track Tech Plus in
their database.

You are the one ranting in public.

And you demand sympathy?

What a self-centered malcontent schoolyard bully.

Pathetic.

>
> The initial thread being your posting someone's personal information on
the
> internet without his consent.
>
The information I posted is public record, made public by Steve in his acceptance of an FCC radio license. No big secret there, nothing sensitive or personal posted. BTW, it turns out his address has changed.

Funny thing is that in t heir zeal to chastise me, and put their two cents in on this matter, respondents here, most anonymous did additional research and dug up all of Steve's real information and beyond, AND POSTED IT! I didn't do that, your COLLEAGUES HERE DID!

> After what you did with the other guy's personal info, do you really think
any
> SMART person would reply with his real name?

You are assuming there SMART people frequent these groups. The majority of posters on these groups post anonymously not because they are afraid of horrible people like me, they do it so they can use foul language, call people names, and say really STUPID things without anyone knowing the true identity of the fool doing it.

>And why do you care so much what name someone is using to make a point
here?

See above.

> The ONLY reason this could bother you is because you want the real
identities so that >you can take revenge with this info.

Revenge? Be careful there my friend, you are starting to cross over the line. I would really like to hear how you describe this "revenge" I will be taking.

> My points made here will have no different meaning just because I
> am stupid and post my real name, if anything, it just shows that I would
be
> stupid and then my points would therefore be LESS credible, not more.

Again, see above.

> > , using foul
> > language and vulgar name calling.
>

> You forgot posting people's personal information on newsgroups because you
> dislike them.

No, once again it was PUBLIC information. Please try and follow. I do not
DISLIKE Steve, what I dislike is when someone violates an agreement and does
not even communicate with the buyer. Maybe I was just expecting too much.

> That is a LOT WORSE than simple name calling and using words that are in
the dictionary.

It is? You are Proud that words like F***, S***, and C*** are in the
dictionary?
The word BITCH is in the dictionary, but if your wife or girlfriend,
(assuming you are a man), posted here, and in my response I called her a
BITCH, you would be upset, correct? Or maybe not.

>
> > The purpose of this post is to issue an update in this matter as to

Negative. It is NOT in my nature to NOT defend when being attacked for
something I stand by.

>

Yes, and I believe he has viewed the threads and will be responding on his own in due course. He will have his response, opinion, and be entitled to it. However, rest assured I will defend against any inaccuracies.

Stay tuned...

Dan

Malcontent and schoolyard bully. Is that the best you can do?

Come on, your strong point seems to be name calling, so let's have it, go
for the gusto, I am sure you can find better and more illustrative names to
call me.

I stand corrected, and will change course here, and in your case, resort to
name calling :

YOU, my anonymous little friend, are a mindless, hateful SCUMBAG with
nothing better to do with your life then respond to silly insignificant
posts on the newsgroups.

This thread I created served MY purpose. How does being so hatefull here
serve yours?

Dan

OK, I'll add "hypocrite".

> This thread I created served MY purpose.

Of course it did. Your "purpose" is all that matters to you.

OK, since you brought it up, that's called a sociopath.

> How does being so hatefull here
> serve yours?

Because *you* might get something out of it.

Ya schoolyard bully.

4660. Yaesu VX-1R - 9k6 packet capable?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-10-21 21:01:47 UTC
From: "Odd Erling N. Eriksen" <odderi@pvv.org>
Message-ID: <ap1pvr$m9n$1@tyfon.itea.ntnu.no>
Source record: 38171

Subject line says it all, really. I assume it cannot operate 9k6 out-of-the-box (Otherwise, Yaesu would have boasted it on their website), but is it possible to insert a signal at the modulator input, thus enabling it to transmit 9k6? Setting the receive mode to WFM ought to enable it to receive 9k6, but for my application, 9k6 TX is the important mod.

Other suggestions as to small handhelds capable of 9k6 packet are most welcome. Thanks,

> WRONG! There are more Techs than any other single class, but still far
> from a majority.

Not only are the Techs a majority (don't forget that most of the other classes on your census are
from dead people and those not in ham radio anymore) but MOST hams from the other classes don't
know code either!
They learned letters A and E to pass the multiple choice tests (that's all it took! Learn those
two letters and you could pick the correct sentence for the multiple choice answers!) and either
never knew the code, or forgot it from never using it as they just wanted to upgrade to TALK on
HF, not use code.

If you even TALKED to most General hams, you would know this.

I also "memorized" the code to get my Extra, but can't remember anything more than SOS, as is the
case with everyone in our ham club.

Next time you are at a ham fest or your local club, you might want to "quiz" a few of your General class hams and you might be surprised how many don't know the code anymore!

I wan't kidding when I said to THINK god dammit!

> the
> > internet without his consent.
> >
> The information I posted is public record, made public by Steve in his
> acceptance of an FCC radio license. No big secret there, nothing sensitive
> or personal posted.

If you really feel that way, you will have no problem posting the same info about yourself, right? Start with your home address. If you refuse, or try to weasle out of this one, you will just be hiding and be anonymous to us! You should have NO PROBLEM posting your address and info here if you REALLY feel there was nothing wrong with posting Steves. If you REFUSE to post your info, then you prove us right and that you know what you did was wrong.

> > After what you did with the other guy's personal info, do you really think
> any
> > SMART person would reply with his real name?
>

> The majority of
> posters on these groups post anonymously not because they are afraid of
> horrible people like me,

But that horrible people like you will post their home addresses and phone numbers.

> they do it so they can use foul language, call
> people names, and say really STUPID things without anyone knowing the true
> identity of the fool doing it.

No. Someone could post as "John Emerson" or "Gordon Thompson" and you would not KNOW they are not using their real names! At least when someone uses a handle instead of a name, they are not trying to be deceptive. Anyone can post on a newsgroup as "Dan Conti" and preach that they are not posting anonymously when they really are. Why not PROVE you are really Dan Conti?! If you don't, then you are just as anonymous.

> >And why do you care so much what name someone is using to make a point
> here?
> > The ONLY reason this could bother you is because you want the real
> identities so that >you can take revenge with this info.

Right!

> > My points made here will have no different meaning just because I
> > am stupid and post my real name, if anything, it just shows that I would
> be
> > stupid and then my points would therefore be LESS credible, not more.

Right again!

>
> It is? You are Proud that words like F***, S***, and C*** are in the
> dictionary?

I, nor anyone else, take pride that ANY words are in the dictionary. Are you proud that the word "THE" is in the dictionary? ALL words of the English language should be in the dictionary, not just ones that YOU or other christian assholes approve of the rest of the population using.

> The word BITCH is in the dictionary, but if your wife or girlfriend,
> (assuming you are a man), posted here, and in my response I called her a
> BITCH, you would be upset, correct?

How would you be calling me or anyone I know names make me upset?! Would this make YOU upset? How creepy to know that all I have to do is say that your mother is a whore and you would be upset by this!
Wow. Think of all the power I have over you!

> It is NOT in my nature to NOT defend when being attacked for
> something I stand by.

YOU were the one who made the attack! LOL! You dumb stupid bozo! You don't even remember this do you? You schoolyard bully!

Source record: 38184

Dear fellow Hams;
Before you decide to donate your hard earned radio gear.
Ask this organization for a disclosure of when & what the solicited donations/gear has been used for or donated too!
If you get NO response from them, then you know the whole organization is pure crap.
Please do not even buy his manuals which are in violation of copy right laws, that he solicits all over the WWW, which is one of the reasons that he was asked to leave the QRZ.com site!
At that point, donate it to a reliable organization or sell it right here, then donate the money locally to a good cause!
Good Luck;
Brian

4673. Pactor Help?

I'm trying to get started in Pactor. My main idea is to send and receive email from my boat. I understand the basics but I'm having a little trouble with the details. I understand I need an HF radio, Pactor modem, and computer. My questions are as follows.

Will any HF radio work? Does it absolutely have to have a Temperature controlled crystal?

I have seen many packet modems that say they work on multiple modes, Amtor, Pactor, etc. However they don't say what modes of Pactor they handle. I.E Pactor-II or Pactor-III how do I tell? What Pactor modems are popular?

Thanks
Robert

Hello!

Yes I have!
Considering all the so called "9k6 capable rigs", the audio input direct to the mixer or any PKT minidin connector wouldn't make it unless the rigs delay between RX and TX is higher than 300 ms (txd 30).
Real 9k6 packet transfer needs less than 100 ms (txd 10) and most european digis do. If you have higher times to switch from TX to RX or RX to TX you would be rejected or couldn't even connect to the digipeater!
An example... well let's say the rudged Icom 706 MKII series and most handies.
I use a Yaesu FT 51r to work 1k2 PKT, and it doesn't work anymore with the TXD set below 23... So it is useless to modify it to 9k6 ability.
The best way is to go for a Kenwood TH D7 V.2, a link-trx or a T7F kit dedicated to 9k6 (and 19k2 with some mods) packet.

>There is a problem here, the problem is elitist thinking people trying to keep us normal modern people off the air because >they are afraid of CB'ers coming in. CB'ers will always not get to be on HAM because they will always be too stupid. In >the desire to eliminate CB people, HAM's have made the requirements so hard that they exclude everyone except again, >the old farts who have too much time on their hands already.

Here's an example of another jackass that spends days trying to rationalize why he/she is too lazy to learn a skill. This is the old fart's real grip. The governing body wants to keep the hobby alive (or maybe knife it in the back) by rewarding the lazy ignorant masses by giving them something for nothing.

> morse code. Only a few nostalgic hams use morse code, no one else.

Thats not true at all. Many hams still use CW, without thinking at all
about nostalga. Also, cars have been in use as long as spark gap
radio. When are you going to dump your car? They do sell small private
helicopters and such, you know.
Overall, this argument means nothing to me, and I must have heard it
401 times. Only when CW is totally useless, would it be worth giving
up totally. And that will never happen anytime soon. I don't care if
something is 400 years old. If it still works, it's still worth using.

>
> > Only the newest of the hams know no code. The vast majority do.
>
> The MAJORITY of hams are no-code technician class! The MINORITY of hams know morse code.

That may be true if the no-codes have passed up the coded in total
licenses, but I bet 1/2 of those no-codes have already given up radio.
Most got a taste, and then faded out once they found they really
couldn't do a whole lot with a no-code license. Almost all hams on the
hf bands know at least 5 wpm. And most no-codes are learning the 5 wpm
sooner or later. Being stuck on 2m rptrs is no way to live, and most
that are still active, are starting to realize it.

Why would I want to do anything about it? I have better things to do with my time. I could care less what the tests involve. I'm just commenting on the supposed uselessness of CW, which is a load of caca. It's only useless to those who don't know it. It's very useful to me, and many others that do use it. But I don't have a mental block, or other strange anxieties when it comes to code. It's just another small part of radio to me. People that whine and moan about the code, and use it as an excuse for not getting a ticket, instead of just getting off their lazy asses and learning it, strike me as weinies. There is a lot of crap I had to learn for the written tests that I really have little use for, but I don't spend my time whining about it. And I don't begrudge any of the newer hams that don't learn code. But I don't consider them quite as capable a radio operator either. "Note I say radio operator, not ham!" But thats their choice. But less is never more. Some get confused, and think less is equal or even more if they use new enough fangled gadgets. I use all the new modes too, and still would prefer CW most of the time. It's more fun. Most of the newer modes are really pretty boring once the new wears off. Sorry, if this strayed for the original topic, but I get tired of hearing code inaccurately slammed by people that have probably never even used it, much less learn it. They really don't seem to have a clue about what it's like to be a regular user of cw. Note the "only can work far off dx" part...I can work cw to anywhere that I can work any other mode. In fact, many qso's are fairly close in. "IE: 40m in the daytime". On 40m at night, CW is the mode of choice if you do want to work dx. You won't be working much on phone, unless you work split. If I didn't or couldn't work cw, I would never get to work europe on 40m. Maybe thats ok to the no-coder, but I couldn't live like that myself. Some of the best dx I hear is on 30m. But if you don't work cw, even a visa or mastercard won't help you on that band. I guess you can use a puter CW program, but it's not near as good a performer as noodleware.

I have had the 570 for a few years, and I have been happy with it. The feature set that it has is pretty typical, but Kenwood did put their money into the performance. This unit uses a Quad JFET 1st mixer; this is one of the best mixer topologies available. The Icom and the Yaesu offerings are also ok, but the Kenwood is my favorite. Also, the 570 does use glass epoxy circuit boards, the same type of material that you see being used in commercial and military equipment.

> from dead people and those not in ham radio anymore)

The up-to-date census (as of 10/22/02) based on FCC records shows that
Tech licensees make up about 1/3 of all hams. See:

http://www.qrz.com/i/census.html?

What proof do you have to support your assertion that No-code Techs
are a majority of hams?

Look at the license renewal rates for the original No-Code Techs
(their licenses started coming up for renewal in February 2001) and
you will see they are dropping out faster than other classes. As for
"dead people," some of the Techs listed in the data base are dead too!

from your remarks, I see you haven't talked to any of the Generals or Extras in your area and quized
them to see if they actually still or ever knew morse code. Don't ASK them if they still know it,
punch out something in code and see if they can tell you what you sent! The results will shock the
hell out of someone like yourself. Of course, I am assuming that YOU even remember any of the code
yourself to do this experiment!

Of course you do. Only someone as pro-code as you are would actually know and use it.

NEW DISCLAIMER....

I will no longer respond to idiotic replies to my posts made by trolls for the sole reason of trying to
keep an argument going. My statements can be easily understood and are always facts. If you reply to
one of my posts and I don't respond, it means your reply was so idiotic that I can not waste time
responding to it. The fact that anyone responds to this post shows that they believe the opposite,
that my post is worth the time to respond, which therefore will prove my point. Thanks in advance for
proving me right.

I agree people who have put in more effort to earn greater privileges
are less likely to loose interest, but I think what you're observing is
largely because newer people are more likely to loose interest than long
term ones.

It works that way with most hobbies and organizations.

The SCS Multimode Controllers are the *only* ones that will do Pactor II or Pactor III. A number of others will do Pactor I. Most any modern SSB radio will do. The stability doesn't really need an oven controlled oscillator because the modem will make minor adjustments in frequency to compensate for a small amount of drift. You will need to have 10 Hz or less tuning steps (1 Hz is better) in order to get the transceiver close enough in frequency for the automatic frequency control to take hold. The Tx/Rx switching speed of the transceiver also needs to be 20 mS or less (which is okay on most modern solid state transceivers).

Also, have you taken into your assumption that the relaxation of vanity call signs may have a lot to do with this. Remember, you have to give up that original call to get a vanity one. Overall, the entire service is loosing ground.

Mark,

I'm following the "code / no code" part of this thread (I don't care about the "bad guy alert" part of it) out of the spirit of curiousity that a new amateur radio operator would naturally have for many of the procedures and operating modes of this hobby that we, as newbies, have yet to discover.

I am a very recently licensed Technician (October 1, 2002) and have not yet had the time to download or reasearch a CW program to purchase, let alone *learn* CW, but that does not imply that I'm *never* going to learn it. However, right now I don't have much "quality time" to devote to the study of CW. I don't think I can even eke out 5 minutes per day of code study, what with working two jobs and being a single mom and all (if you're wondering how I managed to study for the tech license, I used my brief lunch half-hour at my day job to do so). Suffice to say that my job doesn't allow me the opportunity to study CW like I could study for a written exam, and my older car does not have a working tape or CD player so I can listen to the lessons that way (I'm working at getting a newer car, however). I have barely had time to figure out how my new HT works.

Certainly, I do not feel as capable as I think a seasoned radio operator/ham would. But I could add CW to a whole huge laundry list of things that I don't know about this hobby, such as digital modes and how to work them; antenna theory; practical circuitry and electronics (I'd love to eventually know enough about this to build my own QRP rig), satellites and how to work them, EME, and a host of other topics.

This is an intriguing hobby, and I was drawn to it because there are so many ways one could go with it and have fun. I know that people without code certification are limited in the bands they can work, but I don't necessarily feel that I am any less of an operator for that reason. If anything, I feel that I'm less of an operator, simply because I'm a *beginner*.

Everyone has to start somewhere, right? Beginners in any hobby don't like to be made to feel like they are less a part of their chosen hobby than those

who've been in that hobby longer than they have. I have found the idea of Elmering to be a very attractive part of this hobby, because it seems that there are a number of you more seasoned types out there who're willing to take us neophytes under their wings and help them to become more proficient operators. And we can go in many directions in a hobby like amateur radio- there are many different avenues for us to explore. Not all of them require knowledge or use of CW to pursue. Some fraction of the people who choose not to learn CW may have learning difficulties that prohibit them from learning CW quickly, if at all (such as people with dyslexia or auditory processing disabilities).

It was stated in this thread that most hams eventually learn CW if they choose to stay in the hobby. Without knowing this for certain, I'll assume that most active hams eventually go on to learn CW, and that some percentage of those people will use it actively. Code certification is something that I am eventually aiming for, but I also acknowledge that I have some limitations put on me by just living my life, and that I will learn CW slowly. In the meantime, I will try and have some fun learning what can be done in the VHF/UHF bands.

I suppose my message could have been abbreviated somewhat, but my point in posting this reply is that those who've been in the hobby for awhile should not consider the "technician" class types to be comprised wholly, or even partially, of a bunch of uninformed, lazy "CW is obsolete" complainers. Some of us are really new to the hobby, and of course we're not expert radio operators/hams yet. We may not have had time to learn the things you experienced operators know, and maybe the majority of us are working hard at getting there, and just need some encouragement to keep going towards upgrading our licenses/bandwidth privileges.

Never have tried that yet... No real ideas, except maybe try actually
cutting power to the rig for a few minutes, "turn off P/S, or unhook
the battery" and then see if it will reset when you power it back up.
Do you use the "power on check" that is accessed from the "initial set
mode"? You might turn it on before you unpower, so it will be on when
you reapply power. Maybe if there is a problem, it will notice it on
the power up test.

Source record: 38070

Hi All. I bought this radio new just a little over a year ago. I finally got it installed in the car, mainly for listening purposes. But, I'm finding out that the volume on the aircraft frequencies is nothing near as loud as on the other FM bands. In fact, when I scan both aircraft and FM channels while I'm driving, I just can't hear the aircraft if I have the volume set for the desired FM volume. If the aircraft is real close (full strength) it is as little better, but still not what I would expect. I have other Icoms with both bands, namely the PCR-100 and the little IC-Q7A, and these both do a real good job on the aircraft band, unlike this IC-207H. It's just out of warranty now, so I guess I'll live with it. Has anyone else noticed the same thing with their IC-207H? Thanks, Billyboy.

I have had my ham general ticket since 1974. I have no intention on taking another 50 question test for my extra just for a little bit more of band width. There's no other perks that go along with being an extra unless it's about ego for being an extra.

The FCC has made it a bit easier by reducing the code, that was a good move on their part. I'm not a code enthusiast.

EXACTLY! A General has the use of every single band an Extra does! WHY would an Extra need to know and be tested on more theory than a General?! If this theory was actually IMPORTANT to know, then the General should have to know it too since he is using the same bands and equipment! It makes sense for a General to have to know more about shortwave bands and propagation than a Technician does, but it makes absolutely no sense that an Extra Class needs to be tested on anything more than a General does.

This PROVES that it is only to divide Hams into different classes and groups so that some can feel more superior than others in the hobby. I can understand why someone who wants to talk on shortwave would upgrade from Tech to General, but I can't for the life of me understand why someone would "upgrade" from General to Extra unless just to show off and feel better than a General class ham.

> The FCC has made it a bit easier by reducing the code, that was a good move
> on their part. I'm not a code enthusiast.

It really wasn't their choice! Just as eliminating the license for CB radio was not their choice. These choices are made by the people. When the people stick together unanimously, the government is forced to change their laws when they are no longer able to enforce them.

If they didn't eliminate the code from the Tech class, there would not have been enough hams around to help with many emergencies like 9/11 the past decade or so. Reducing the code is an attempt to get more people to be licensed to use the HF bands, but they are starting to see that just reducing it is not having the rush of new General class licenses as they had with Technician class.

Next year the code requirement will be dropped altogether for every class! Remember that I told you this now, so you don't think that the FCC made this decision next year on their own when it happens. This is out of their control. The government NEEDS hams, we don't NEED to help them. We don't want to learn something we have no intention of ever using, so the ball is now in their court, and you will see they MUST and WILL eliminate code next year when the rest of the world agrees that it is time for it to be gone.

If you don't know CW, then you are a slightly less capable operator
than someone who does. Thats just the plain truth. It would be the
same as a driver not being able to parallel park. He is a less capable
driver than someone who can. If we go to a field day, and you work
phone , and I work CW, and we make an equal number of contacts, I will
make twice the points you will. That would only be a small example of
where my knowing code would pay off. Being able to decode an emergency
message is probably the greatest reason. In an emergency, you would be
useless if the person in trouble only had a cw rig. I don't know how
else I could describe "less capable". But note, I make a distinction
between being a less capable "operator" and a less capable "ham". You
could have a no-code tech who was a more capable "ham", if he did more
overall, and the coded ham did little to nothing.

I don't, and never have. Only a small fraction of the tech's are
actually whiners. Many are not hams at all yet. If you are not a
whiner, which you don't seem to be, you have nothing to worry about
from me. But some do fit the description...I've seen many, that if
they applied the energy used to constantly whine about the code, they
could pass the test in no time. Some people seem to make a career out
of whining about the code. Just do a deja search on misc
amateur/code/no/code, etc...Heck, I talk to many no-code techs. I've
never given any of them a hard time, although I do try to talk them

into learning the code and upgrading. But if they don't , I sure don't lose any sleep over it. It won't be long before the code requirements are history. I have no real feelings about that either way. Nothing stays the same. MK

Well... I think you're both right and wrong here.

I agree with you that no additional skills, above and beyond those required by the General ticket, are technically required to _operate_ in the Extra bands. In that sense, you're right. The extra learning and theory is not necessary for _you_ personally.

That isn't the point, though. It isn't all about you (or about me, or about any other ham individually).

The way that I see it (and the way that I read the Federal legislation which defines the Amateur Radio system), one of the big purposes of the Amateur Radio system is to help advance the state-of-the-art of radio itself, and to encourage and cultivate a community of people who are skilled in the art. This serves the "public good" and is a big part of what justifies setting aside some pretty big chunks of the RF spectrum for amateur (nonprofessional use). [There are a lot of other groups fighting for spectrum space, and many of them are willing to pay millions (even billions I think) of dollars to the Government in order to "buy" spectrum for commercial uses.]

Having amateurs who are willing to go the extra mile, and learn a bunch of additional "unnecessary" theory and electronics skills, helps encourage innovation both within the amateur community, and in the society as a whole. It enables amateurs to contribute to, and help advance, the state-of-the-art in amateur operations, and many of these advances end up reflecting back into other areas of radio and electronics.

The Extra-class license exists, with its "perks" of added operating sub-bands, as an incentive to encourage amateurs to improve their own

skill levels to those *beyond* the ones needed to simply operate in the bands... because it's believed (by the people who set up the system) that having a cohort of amateurs with those sorts of advanced skills is good for the health of the sciences in the U.S. and thus for the good of the public as a whole.

I was just reading some letters and editorials in EE Times magazine, about the rather dire state of the job market for skilled electrical engineers here in the U.S. A lot of very good EEs are out of work, as a result of the .BOMB downturn, and as the result of many companies' decisions to "export" the EE design work to overseas locations to save money. Things don't look as if they'll get a lot better in the near future. Enrollment in EE college degrees is down... a lot... as a result of the poor job/career prospects in this profession, and the U.S. may very well find itself rather starved for skilled EEs in the years go on.

Having some amateur-radio operators who are willing to buck this trend, and improve their skill sets, may be very important.

Speaking for myself... one of the reasons I chose to go for the Extra ticket, once I got my Technician license, was precisely because of the advanced theory required. It gave me both the incentive, and the opportunity, to learn quite a bit that was new to me, and it opened the door to additional opportunities to learn and understand.

There are already several classes of civilian radio capability available to pretty much anyone, without regard to skill or training or ability - CB and FRS are the two most obvious (and one could argue that cellphones are yet another). I'm glad to see that there's still one which, by its very definition and terms, requires its participants to learn and to improve their knowledge and abilities.

If "pushing" yourself through the advanced theory isn't your own path, that's cool... nobody says that you have to. I do feel, though, that having the Extra class (and the very modest perks which come with it) does serve a reasonable and valid purpose for amateur radio, and I'd be a bit sorry to see it eliminated.

This icom 2 meter and 440 all mode satellite base works and looks great.
Comes with tone board installed.
Also comes with original box manual mic and power cord.
$775 shipped u.s only ups insured.
E-mail for picture of the radio.

4718. FS: Yaesu VX-1R

How about that PO Box?

Why do YOU hide behind that?

There were a few "problems" witht he facts, weren't there?

In your own words, "Who gives a rat's ass?"

LOL!

Now this is an original one. Musta thought long to come up with
this. Not a bad idea though.

As one who probably felt (and feels) the way you have expressed
yourself about the wide variety of opportunity in ham radio, I
sincerely hope you find the time to at least "taste" those aspects of
the hobby that interest you.

> It was stated in this thread that most hams eventually learn CW if they
> choose to stay in the hobby.

I would guess that one probably needs to define the concept "learn
CW." I have many friends who are 13 wpm Advanced and 20 wpm Extra who
have never touched a CW key or paddle. I have other friends who are 5
wpm General and Extra who have discovered QRP and are enthusiastically
building low power transceivers and making long distance contacts
across the HF bands.

Currently, most active hams who want to use the bands below 6 meters
will have tested out of CW at some speed or another. Whether that
hobbyist has actually learned and uses CW is more a matter that
depends upon her/his interests, which is really what you are saying.

> Without knowing this for certain, I'll assume
> that most active hams eventually go on to learn CW, and that some percentage

A group of hams who are fed up with the FCC's efforts to stop the spread of illegal amplifier use are reported to be buying linear amplifiers and installing trojan horse mods that can burn out the receive section of transceivers operating out of band.

The modifications detect certain transmitted frequencies and trigger a device installed on the amp that places a series of high voltage pulse type signals across the antenna line effectively burning out the front end of the receiver.

Only technicians familiar with solid state circuits can detect the devices which are cleverly disguised as actual amplifier components.

Be very careful when purchasing used amplifiers or purchasing amplifiers online from unknown sellers. The information that I have received indicates the normal user will re-sell the amplifier which once again will perform it's mission un-detected during normal use. The user will think the problem is his transceiver, not the amplifier. Use extreme caution.

It might be much easier to hook a low-Q series LC circuit resonant for 27.2 (or thereabouts) straight from output to input. Blows the radio, self-destructs the amp, and the evidence goes up in a puff of smoke.

> That isn't the point, though.

We know it isn't. I pointed out what the point was. To separate hams into different groups or "classes" and we all know what problems that causes. We need to learn to UNITE together, rather than to separate ourselves into classes. Isn't it bad enough that we are separated into classes by race? Do we really need to add MORE classes to cause MORE problems? We need to make ONE class of ham license.

> The way that I see it (and the way that I read the Federal legislation

Right, not separate people into more sub groups and classes.

> This serves the "public good" and is a big
> part of what justifies setting aside some pretty big chunks of the RF
> spectrum for amateur (nonprofessional use). [There are a lot of other
> groups fighting for spectrum space, and many of them are willing to
> pay millions (even billions I think) of dollars to the Government in
> order to "buy" spectrum for commercial uses.]

Right, so what does Ham radio do? They make certain parts of bands that can only be used by the smallest minority of Hams that are Extras. When these parts are not being used, they will be taken away and put up for auction. Allowing all hams to use all parts of all bands designated for ham use does several things...

1) It makes those parts of the bands USED more which means they have less chance of being taken away.
2) It doesn't have certain portions of bands where an Extra can't talk to anyone else but another Extra! If there was a part of the radio spectrum where only one race could talk to another race, boy would there be protests and outrage! This is really no different, other than the fact instead of skin color being different, we invented another way to put people into groups that was not necessary.

> Having amateurs who are willing to go the extra mile, and learn a
> bunch of additional "unnecessary" theory and electronics skills, helps
> encourage innovation both within the amateur community, and in the
> society as a whole.

That is wrong. You should never have to learn "unnecessary" things. There was a reason hams were required to learn code back in the old days, it was because they were required to pass along military communications in times of emergency. Now that the military no longer uses code, this requirement is unnecessary. When people say that more theory or something should replace the code requirement if the code requirement is dropped so that it is not as easy to get the license is not understanding the point AT ALL!
The code requirement was NEVER to make it harder, or another hurdle to jump over to keep the "rif raf" off the bands! It actually had a purpose for being a requirement! That purpose no longer exists for many years now. We should not make it HARDER for someone to get a ham license, we should make it as easy as possible! The only reason we NEED to make sure some theory and technical knowledge is known first, is because we are allowing them to run transmitters with hundreds of watts output! If the power limit was limited to a few milliwatts, no one would need to be tested at all, and is why no license is needed for CB or FRS radios. (They don't need to know code either) The power output used, and the fact that hams are allowed to make their own transmitters is why we want to make sure they know something first as this could cause lots of interference and other problems to public safety if they don't! Not knowing the code will have no effect on these problems at all!

> It enables amateurs to contribute to, and help
> advance, the state-of-the-art in amateur operations, and many of these
> advances end up reflecting back into other areas of radio and
> electronics.

Right. And code has nothing to do with any of that.

> The Extra-class license exists, with its "perks" of added operating
> sub-bands, as an incentive to encourage amateurs to improve their own
> skill levels to those *beyond* the ones needed to simply operate in
> the bands...

What incentive? There are no other bands to use. A General can access the same bands as an Extra. What incentive is there? One should want to learn more so they know more, not so that they can talk on a few special sections of those bands where no Generals will be allowed to talk. If anything, the incentive is that you get to be a snob. Some incentive.

> because it's believed (by the people who set up the
> system) that having a cohort of amateurs with those sorts of advanced
> skills is good for the health of the sciences in the U.S. and thus for
> the good of the public as a whole.

It is understandable why you would need to learn more and be tested more to operate on HF bands as opposed to 6 meters and above. It is understandable that you should not force someone who wants to only operate on VHF and above to learn all the crap and be tested on HF stuff, just as no one should have to learn code if they don't want to use it. You can speak Russian on Ham radio if you want to, but we don't force ALL hams to learn Russian before they are allowed to speak English on the ham bands, do we?

And this current trend is happening while the Ham radio requirements and classes are set up as they are right now! Perhaps if we make just one class and drop the code altogether, and make it as EASY and ENJOYABLE as possible to become a ham, more people will become hams, and then this will lead to harder electronics and careers. (to steal from the anti-drug campaign slogan)

After all, it was the fact that I could buy a CB for $5 at a flea market without needing a license that got me started and how I eventually became a ham. I had to learn the code and therefore, couldn't talk to a lot of my friends who had a hard time learning it, so I had much more fun on the CB, even after getting my ham license.
When the code requirement for 2 meters was dropped, my wife was able to get her license and ham radio became more fun. The code has stopped a lot of my friends with good technical skills that far surpass many Extra hams from being able to talk on radios when they were repairing similar radios with their General Class Commercial FCC licenses. If you have seen the Extra exams, most of the questions are taken from the GROL exam and worded exactly the same!

> Speaking for myself... one of the reasons I chose to go for the Extra
> ticket, once I got my Technician license, was precisely because of the
> advanced theory required. It gave me both the incentive, and the
> opportunity, to learn quite a bit that was new to me, and it opened
> the door to additional opportunities to learn and understand.

I already know the Extra theory and MORE and have the GROL license. Next year when the code requirement is dropped, I could take the test in 5 minutes and get my Extra,

but I don't see any need to do that. As a matter of fact, I would never want to talk on portions of a band where none of my friends and family would be allowed to talk. I'm not that kind of person. It takes a special kind of person to be like that.

> There are already several classes of civilian radio capability
> available to pretty much anyone, without regard to skill or training
> or ability - CB and FRS are the two most obvious (and one could argue
> that cellphones are yet another). I'm glad to see that there's still
> one which, by its very definition and terms, requires its participants
> to learn and to improve their knowledge and abilities.

You mean FORCES them to pass a multiple choice test. Many of them never know anything about what they are being "tested" on, they only memorized the answers. People who used CB learned on their own about antenna systems, how to fix their radios (although this was technically illegal) and how to fox hunt and track down other CBers. They learned this because they wanted to, not because the law forced them to.

Many people now HATE the code only because it is something that is being forced on them as a requirement.
When the code requirement is eliminated, I predict that code use and learning will INCREASE! Once you take away that "YOU HAVE TO LEARN THIS" away, people will actually start learning it on their own because they WANT to learn it for fun and nostalgia. The same way people learn other modes on Ham radio that are not a requirement.

> If "pushing" yourself through the advanced theory isn't your own
> path, that's cool... nobody says that you have to. I do feel, though,
> that having the Extra class (and the very modest perks which come with
> it)

The only perks are that you get to be a member of an exclusive snob club.

> does serve a reasonable and valid purpose for amateur radio, and
> I'd be a bit sorry to see it eliminated.

That's like saying you would be sorry to see racism be eliminated. I would rather see all the separate classes of ham radio go away and everyone be on the same team! Instead of being at a hamfest and having someone ask me what class license I have which is like asking what religion or race I am, I would like it if no one could ever ask that and all hams could just look at each other as EQUALS.

No more of this "Let's go talk on the exclusive Extra channel so no Generals can bother us" crap.

> General to Extra unless just to show off and feel better than a General class
> ham.

We didn't make the rules. The fcc decided years ago "about 1968" that
hams were becoming appliance operators for the most part, and decided
to use incentive licensing to encourage more learning of theory, and
yes, they threw in code also, but the theory was the main concern.
Whether or not it was a good idea, I won't guess...I know many of
those generals that had full privileges, and then lost portions
overnight, were bent severely out of shape. Don't blame em , really...
I have been a novice,general, advanced, and extra, and I haven't
noticed any change in the way I feel. I sure don't feel better. If
anything due to aging, I feel crappier. The main reason I upgraded was
to get a shorter callsign while the pickings were good. Most of the
decent ones are gone now. But I also get to do more things than when I
was a general. Lets take the russian sat's. You can't work the 15m-10m
mode unless you are at least advanced. Lets take DX on 40m. The best
dx on 40m is the extra class CW portion. Above 7.025 , the dx falls
off fast from EU. Some up to 7.035 or so, but scads of them below
7.025. That in itself makes it worth the trouble to me. I almost never
use the extra phone bands, so I could care less about those. But it
does give you place to get away from the "crowd". Can be real handy on
75m at night. You can't hardly find a place to sit in the general
band. I almost never see cases where extras act "superior" on the ham
bands. Thats mainly a figment of the imaginations of a few non hams.
All the people I talk to could care less what class I have.
>

> or so.

I'm sorry, but you must be high....There has never been a shortage of
hams to do anything.

Reducing the code is an attempt to get more people to be licensed
to
> use the HF bands, but they are starting to see that just reducing it is not
> having the rush of new General class licenses as they had with Technician class.

You sure had a rush of generals going to extra though. I wonder why
they all felt it was worth it?
>
> Next year the code requirement will be dropped altogether for every class!
> Remember that I told you this now, so you don't think that the FCC made this
> decision next year on their own when it happens.

Duh....The fcc will drop the code when WARC does, mainly because the
radio makers "icom, kenwood, yaesu" will be on their asses to do so.
Money talks, the rest walks...

This is out of their
> control. The government NEEDS hams, we don't NEED to help them. We don't
> want to learn something we have no intention of ever using, so the ball is now
> in their court, and you will see they MUST and WILL eliminate code next year
> when the rest of the world agrees that it is time for it to be gone.

They probably will if WARC does, but it's no great secret. And really
not related to us hams much at all. But the fcc doesn't HAVE to do
anything. There is not, and never has been a shortage of amateur radio
operators. When they drop code, all it will amount to is a slight
reduction in the amount of knowledge required to get a ham ticket. No
more, and no less. Myself, I think dumbing down the exams is a
mistake, but I'm not going to whine about it. The tests we have now,
even for the extra, are a joke compared to the exams given in the
1960's. You had to actually know what you were doing back then. Now,
any dumbass can get an extra. I've seen 12 year olds pass it, that
couldn't change a tube in a HW-101 without someone holding their hand
in the real world. It's really no big deal, and we hams know it. Or
most of us, anyway... It's only the outsiders that seem to have
anxieties about this from what I see. That, and maybe tightass people
with paper thin skins. Most of the people I talk to are rednecks, with
no such skin problems. MK

So just how technical would you make the exam for the one class of ham license? If there is only one class of license, then the exam needs to cover a lot, most of what would be on the tech, general and extra tests. So now what do you do about an entry level class of license to get people into ham radio? How many would be discouraged at having to learn all the material at one time to get this one class of license?

Hi all, the FT-51R has 2 LEDs on the upper front of the radio.
One side is for VHF, the other is for UHF. They glow red on transmit
and green on receive.
Now the question. A while ago I was playing with the radio and was able
to turn OFF the GREEN LED (receive) on the VHF side. If I remember
correctly by doing this saves the LED draw on the battery. I only did
the one side. I can't find the manual and I'll like to put it on
again. ANY CLUES??????????????????
Please e-mail me direct at:
mrrusso@optonline.net

THANKS, Mark

4750. FS: Kenwood TS-520 SSB/CW tranceiver, Works great

Newsgroup: rec.radio.amateur.equipment
Date: 2002-10-24 02:52:03 UTC
From: maritimus49@aol.com
Message-ID: <20021023225203.05783.00003665@mb-mw.aol.com>
Source record: 38110

I have for sale the Kenwood TS-520 80-10 meter transceiver. It works very well and looks excellent. The front panel is in very good shape and looks like new. The knobs are shiny. The carrying handle shows little wear and the rig has all 8 of its bottom and side feet plus the access door on the left side is excellent and has no missing "rivets". Comes with AC and DC power cords and the manual. It will be carefully double-boxed for shipment. Here is your chance to own an excellent and reliable transceiver for a very reasonable price. Asking $225 plus shipping. Thanks for looking.
73,
Bruce K6RQR

UNPLUG ANYTHING WITH A MICROPROCESSOR FROM YOUR HOUSEHOLD WALL OUTLETS!

As you know, since the deregulation of energy, your household 115V electricity MAY NOT come from the same sources it used to! Your electric company is free to buy and sell electricity on the open market as they please. Today we have just learned, that in a few major cities the electricity purchased has been found to contain a secret digital subcarrier on it that when executed, is a destructive computer virus! Because of the way the national power grid is set up, it is virtually impossible to trace these particular blocks of electricity back to their source or sources in the US.

PLEASE!! As soon as you read this, quickly unplug ANY computers and household appliances that contain microprocessor chips from their wall sockets until we can somehow locate the source of the subcarriers and put an end to it. This will include things like televisions, VCRs, radios, home entertainment systems, answering machines, cordless phones, digital clocks, and digital thermostats.

You may ONLY charge your cell phones using a car adapter. Do NOT charge them with standard wall chargers, or the virus could be spread using cellular phones calls as well. Major appliances manufactured in the past 20 years including refrigerators, washers, dryers, microwave ovens, electric ovens, electric stovetops, and even gas appliances that have digital clocks, timers, and controls built in them ARE ALL VULNERABLE!. (Backyard, gas bar-b-ques have been declared safe to use.) If you are at all unsure, UNPLUG IT!

We cannot stress enough the extreme havoc this virus will cause if not stopped in its tracks! It will spread from house to house and community to community if not stopped. This is why we are urging EVERY CITIZEN to do their part by unplugging ALL intelligent household appliances NOW! Tune in your battery operated AM radio to an Emergency Broadcast station and listen for the official "ALL CLEAR" announcement. If you don't have an AM radio, GO BUY ONE with a LARGE box of batteries. PLEASE, DO NOT PLUG ANYTHING BACK IN UNTIL YOU HEAR THE "ALL CLEAR" ANNOUNCEMENT FROM THE EMERGENCY BROADCAST SYSTEM!!

Start with YOUR PC and MODEM *FIRST* General Johnson Jameson!

How curious that a person who holds out the benefits of "dwelling in unity"
takes such great pride in his ability to INSULT!!! people. (All caps
quoted from Donnie's original post)

Sigh, another person not quite clear on the concept...

You seem unclear about the concept of license class and operating privlages.

Take your typical state drivers license. Your basic automobile license will not let you operate a motorcycle or a semi-tractor. This does not imply that you are a lesser person than those who hold licenses for motorcycles and tractor trailor rigs.

Take your non typical pilot's certificate (license of sorts) which grants you privlages for single engine, multi engine, complex, commercial, rotary wing helicopter, hot air balloon, etc etc etc. This does not imply that the holder of a single engine private pilot's certificate is any lesser a human than a multi-engine commercial pilot.

Now, if your reasoning were applied to pilot's certificates, would you put your wife and kids in a Boeing 747 piloted by lil ole me with a private pilot, single engine certificate??? I dont think so!

Code is an antiquated mode of communicating that should be OPTIONAL and not mandatory to operate on HF. In this day and age of digital communication, there is no reason to require code proficiency.

Mike, I'd like to thank you personally for the wonderful advice you have supplied. After I read your post I immediately went outside and took a large axe with me. The 220 volt lines to my trailer fell quickly from the repeated blows of the razor-sharp double-edged wood axe. A small fire erupted near the charged wires but I soaked it good with the garden hose and got one hellava shock.
Apparently water conducts electricity very well!

After the local utility company restored power, I quickly checked for new viruses on my trusty C-64 and found NOTHING. The VCR, DVD and clock-toaster all seemed functional, I'll check them when the sun comes up and it is safe to go outside.

Good work soldier!

Respectively

Ah-h, come on! It's pretty funny, IMHO, and certainly better than the petty bickering that's been going on for the last week or two. MUCH better than the original post about the booby-trapped linears. Personally, I give it a "9", and have forwarded it to friends and coworkers for their enjoyment.

Upgraded to a 3CX10000, huh? That's all we used in the main TX at the FM station I used to engineer for.. the guy's house must glow in the dark. And where would he find an antenna that would stand up to it? Let alone a radio that that much stray RF wouldn't turn into a large, molten paperweight??

I'm not nearly technical enough to make the stuff I need to reprogram my HT1000 (and the only dealer in town charges quite a bit for the service), so if you're going to tell me that I'm a moron I'll save you the time by openingly admitting it.

Is there someplace I can just buy the equipment I need? I've been told that what I need is an RIB box, a programming cable, and the software. I have the latter two, but no box. If you have any suggestions, please shoot me an email at emtff1977@yahoo.com.

Thanks.

I think the Federal Government should provide a free rig to every person who passes the simple one class ham license. After all, if we don't do that then hams will still be divided into classes based upon how expensive a rig they can afford to buy. :-)

> needs to cover a lot, most of what would be on the tech, general
> and extra tests.

No, not what is on the extra tests. A General is allowed to operate ALL the bands an Extra does, so the General test obviously must have all the necessary testing needed to operate those bands.

A General exam is not that much more than the Tech test as it is the next step up. The only thing that made it hard for people to get a license was the code. After the code was dropped in the Tech class, thousands of people were able to become hams that never before were allowed to. The theory and rules part of the test is not hard. Many holders of GROLs never got ham licenses only because of the code.

Basically, all you need is the General class, but it would just be called a Ham license, no class needed.

> So now what do you do about an entry level class
> of license to get people into ham radio?

This would be the entry level. It is only a few questions more than it is now. Basically, all you need to know is what is relevant to the propagation and rules relating to HF.

> How many would be
> discouraged at having to learn all the material at one time to get
> this one class of license?

Actually, it would be EASIER than it was a few years ago! The entry level Tech required passing the NOVICE test first! Then you had to take the Tech test too! Now they only require Techs to take the test exam and dropped the Novice class altogether. By just adding the few General questions needed to be aware of the differences of HF to the Tech test, you really made it no harder than the way the No-code Tech tests were when they first came out!

> that you are a lesser person than those who hold licenses for motorcycles
> and tractor trailor rigs.

The different classes are necessary here because you are being tested on DIFFERENT vehicles! No need to test someone on driving a semi truck if they only want to drive a car! (No need to be tested on code if you only want to TALK on HF!) The Extra class gives you NO ADDITIONAL band use from a General. What type of DRIVER'S LICENSE in your analogy means additional testing to drive the exact same vehicles as a lower class driver's license?????

> mandatory to operate on HF.

The key thing here is to operate by using a MICROPHONE on HF.

If you WANT to use code, then you have to learn code. If you only want to use a microphone and TALK on HF, there is no need to learn code.

Likewise, a person who is unable to speak because of a birth defect or injury, does not have to be tested on how to speak into a microphone if all they want to do is use morse code.

When you get a fishing license, you do not have to pass a test on your ability to understand Russian.

> FCC reduces the requirements to "What's your favorite color?" these
> same whiners will say: "Why do I have to decide a favorite color?"

Why do you have to learn the Russian language before you can get a driver's
license?

.......you DON'T. and YOU would then also "bitch" "Why do I have to learn
Russian to get a driver's license?" with the rest of us logical thinkers.

The questions are....

Why do I have to learn morse code in order to use a microphone?

Why do I have to take an Extra test in order to use the same bands as a General?

The Extra class needs to be eliminated altogether. The code requirement needs to
be eliminated altogether.
Those that wish to USE morse code, can then learn the code.

This is all common sense, sorry that is a new thing for you.

> How about the theory of getting more for doing more? More effort =
> more privileges.

There are no more privileges from General to Extra. NONE. Unless of course
the few channels set aside on the same General bands that only Extra snobs can
talk to other Extra snobs without having to talk to any Generals. In an
emergency, then all of a sudden the General magically becomes "technically
qualified" to use these channels too. SNOBBISH.

> Be lazy, get less. Pretty simple, huh?

Then why is it you get to have a driver's license and didn't have to learn Russian
or French first? You LAZY SON OF A BITCH!!

> time. It's a HOBBY, not a job.

Right. So is fishing. So why don't you have to learn how to hunt and kill
buffalo before you can get your Extra class fishing license? Why is ONE class
of license good enough for that HOBBY?

> I've noticed a pattern in my many years as a VE: it's no coincidence
> that the only whiners are those that have "no intention" of expending
> the minuscule amount of extra effort to gain additional privileges.

Let me tell you something. I have a GROL and that has quite a bit more than the Extra did. When the code requirement is dropped next year, I will NOT be upgrading to Extra, even though I could pass that test in five minutes without studying for it. Why? Because I don't gain ANY extra privileges, so why would I waste my time?? I can use all the same bands an Extra can NOW! The only thing I can't do, is talk to snobs like you on the few special channels set aside on each of the General bands for Extra snobs.

Why would I waste my time learning code when I will never use it? Do you learn how to speak Russian for no reason at all, other than perhaps so that others will not call you lazy??

It is very interesting to note that I have no problem with you learning or using morse code, why should you care if I don't like code and have no intention of using it?

Start hitting the books so you can be tested on Russian before you ever use your HF bands again. If you refuse to do this, you are as LAZY as everyone else you accuse of being lazy.

Let me correct this this statement. I learned the code to get my General,
but never
ever USED the code, so now I don't know it anymore, as is the case with most
other
Hams I know. I realize I don't have to wait until next year when the code
requirement is dropped in order to get the extra as a General now does not
have to
pass any code test again to get the Extra. So, being that I could go
tomorrow and
take the Extra test and pass it without studying as they borrowed most of
their
questions from the GROL (which I have) I still don't see why I would waste
time and
gas to do this as I would get no additional bands to use. As it is, I
never use
anything below 2 meters anyway as that is not where technology is going, and
Hams
should be helping to invent and create new technology as we have done in the
past.
Right now the microwave bands are the main concern, and the bands most
threatened to
be taken away and auctioned off to phone companies and the like.

Keep pounding out morse code on shortwave radios in between washing your
clothes on a
washboard, while the rest of us evolve.

While I agree that CW is antiquated, someday we may need it. If we
ever lose SATCOM, the only way to get messages longhaul will be via
CW.

I must admit that I was totally surprised when I learned that the US
Navy had dropped morse as a requirement for the Radioman rating. How
the hell can you call yourself a radioman if all you are doing is
using a computer?

And we need to determine the economic and ethnic diversity and be sure all classes are covered equally. No additional licenses would be issued except to under represented diversity groups.

Let's see, let's start with womyn... once they are 50 percent men may once again apply for licensees.

All hams will use the same rig and antenna so none will feel they are a lesser ham. Those that have knowledge that other don't have will be fined for revealing it, as it makes those without it feel bad...

Morse code shall be banned as it is a clear sign of effort expended for the sole purpose of making others feel bad...

DXCC and other awards will be issued with the new "no test licence" so none may claim superiorty and make other feel bad. End of politically correct horse droppings and start of real feelings!

I like big cars, big boats, big motorcycles, big houses, and big campfires. I believe the money I make belongs to me and my family, not some governmental stooge with a bad comb-over who wants to give it away to crack addicts for squirting out babies.

Guns do not make you a killer. I think killing makes you a killer. You can kill someone with a baseball bat or a car, but no one is trying to ban you from driving to the ball game.

I think that if you feel homosexuality is wrong, it is not a phobia, it is an opinion.

I don't think being a minority makes you a victim of anything except numbers.

The only things I can think of that are truly discriminatory are things like the United Negro College Fund, Jet Magazine, Black Entertainment Television, and Miss Black America. Try to have things like the United Caucasian College Fund, Cloud Magazine, White Entertainment Television, or Miss White America and see what happens. Jesse Jackson will be knocking down your door.

I have the right "NOT" to be tolerant of others because they are different, weird, or tick me off. When 70% of the people who get arrested are black, in cities where 70% of the population is black, that is not racial profiling, it is the law of statistics.

I know what sex is, and there are not varying degrees of it. If I received sex from one of my subordinates in my office, it wouldn't be a private

matter or my personal business. I would be "FIRED" immediately!

I believe that if you are selling me a milk shake, a pack of cigarettes, a newspaper or a hotel room, you must do it in English. As a matter of fact, if you want to be an American citizen you should speak English. My father and grandfather shouldn't have to die in vain so you can leave the countries you were born in to come over and disrespect ours.

I think the police should have every right to shoot your sorry ass if you threaten them after they tell you to stop. If you can't understand the word "freeze" or "stop" in English, see the above lines.

I feel much safer letting a machine with no political affiliation recount votes when needed. I know what the definition of lying is.

I don't think just because you were not born in this country, you are qualified for any special loan programs, government sponsored bank loans or tax breaks etc., so you can open a hotel, convenience store, trinket shop, or any other business.

We did not go to the aid of certain foreign countries and risk our lives in wars to defend their freedoms so that decades later they could come over here and tell us our constitution is a living document and open to their interpretations.

I don't hate the rich. I don't pity the poor. I know wrestling is fake, but so are movies and television, and that doesn't stop you from watching them. I believe a self-righteous liberal or conservative with a cause is more dangerous than a Hell's Angel with an attitude.

I think Bill Gates has every right to keep every penny he made and continue to make more. If it ticks you off, go and invent the next operating system that's better and put your name on the building. Ask your buddy that invented the Internet to help you.

It doesn't take a whole village to raise a child right, but it does take a parent to stand up to the kid and smack his little ass when necessary and say "NO"

I think tattoos and piercing are fine if you want them, but please don't pretend they are a political statement. And stay home until that new lip ring heals, I don't want to look at your ugly infected mouth as you serve me fries.

I am sick of "Political Correctness" and of all the suck ups that go along with it.

I do not think any of us owe reparation to any one. I know a lot of black people, and not a single one of them was ever a slave, and I do not know any one who has ever owned a slave. We need to get over it already!!!

Why must it be, "African Americans", "Mexican Americans", "Asian Americans", etc. I don't go around saying I am European American just because my great great great great great Grandfather came here from Europe.

I am proud to be from America and no where else!!! And if you don't like my point of view, tough!!! That is your right because this is America!!!

Are they still using radios with the computers? How does knowing morse code
make someone a radioman?

4788. Wanted: Tek 2465b service manual

Newsgroup: rec.radio.amateur.equipment

Hi,

I need the service manual for the Tektronix 2465b Oscilloscope.

thanks,

Dennis

Just got to admire the quality construction of this puppy....

You don't want to fire this one up if you want to have children, with all that stray RF the current owner must be sterile.

Would make a nice jack o lantern for the front porch.... if turned on..

LOL, bad use of the English language, KMA whoever you are.

Bad does not need to be capitalized in your sentence, and
it should be "That should be...(As if mailcity...)

You need to shut up and learn something....Putz.

> All hams will use the same rig and antenna so none will feel they are a
> lesser ham. Those that have knowledge that other don't have will be fined
> for revealing it, as it makes those without it feel bad...

This is silly. If there was a requirement to learn and be tested on how to hunt buffalo before getting a fishing license, or another class of fishing license that required more testing without giving any additional lakes to fish in, anyone pointing out how stupid that would be would be replied to by you in this manner:

"All fishermen should use the same poles and reels or they will feel like they are a lesser fisherman."

?!?!?!

> Morse code shall be banned as it is a clear sign of effort expended for the
> sole purpose of making others feel bad...

Not banned, just not a requirement. The problem is that you have no idea or concept of the difference between the two. No one wants morse code banned.

It would make no sense to REQUIRE someone to learn and be tested on using the Russian language before they would be allowed to get a fishing license in the United States, right? (perhaps you will argue this too, but then we all will know you are just a troll if you do.) Those that realize this would be stupid, would be opposed by idiots that claim they are lazy and trying to ban the Russian language because they don't think they should have to learn Russian to get a fishing license in the USA. There would be no ban, people could still choose to learn and speak Russian in the USA while fishing if they so chose to, but there is no need to force ALL people who fish in the USA to know and use the Russian language.

Anyone will always be free to learn and use morse code on ham radio, but why force everyone to learn morse code that only want to use a microphone to talk on HF?

Make no sense. You can continue to TRY and make an argument, but no argument you make will ever make any sense in this argument, ever.

> DXCC and other awards will be issued with the new "no test licence" so none
> may claim superiorty and make other feel bad.

ARRL awards and the like are worthless. Anyone can make up an award certificate and award it. Why I could make an award for most states and countries contacted without using morse code, big deal. Contests and the like only jam up the frequencies without any real purpose other than those that find

it really important to post all these worthless pieces of paper on their walls to feel really important. If you want to talk to lots of people in different states and countries, go ahead and do it. But don't do it just because you want to get one of these silly pieces of paper, do it because you like to do this. Seems everything in Ham radio is only to get into a better class, or to win more awards, not to just have a good time or to invent new technologies relating to radio. But then, there is no ARRL awards to invent new radio technology, so why would anyone bother to do that when they don't get any piece of paper for it?

> I like big cars, big boats, big motorcycles, big houses, and big campfires.
> I believe the money I make belongs to me and my family, not some
> governmental stooge with a bad comb-over who wants to give it away to crack
> addicts for squirting out babies.

Now you are making some sense. There is nothing wrong with this statement.

> Guns do not make you a killer. I think killing makes you a killer. You can
> kill someone with a baseball bat or a car, but no one is trying to ban you
> from driving to the ball game.

Again, nothing wrong here. Even the sniper was not considered a murderer when he killed people in the Gulf war for Clinton and Bush, then he is a hero. He is only a murderer when he kills people in the USA for people in the middle east.

Of course if you were living in the middle east, he would have been a murderer before, and a hero now. The difference between murder and killing depends on which county you live in or what the local laws are.

A police officer can use a gun to kill and never be called a murderer. The word murder is ridiculous, lets just call killing "killing" as it applies to everyone equally.

> I think that if you feel homosexuality is wrong, it is not a phobia, it is
> an opinion.

Right. Someone who HATES homosexuals can NOT be a homophobe! Homophobe means you are AFRAID of homosexuals. Likewise a person who abuses children can NOT be a pedophile! Pedophile means to LOVE children.

> I don't think being a minority makes you a victim of anything except
> numbers.

Being a minority means you are a victim of democracy. Everyone else will always be outvoting you and telling you how to live your life.

> The only things I can think of that are truly discriminatory are things
> like the United Negro College Fund, Jet Magazine, Black Entertainment
> Television, and Miss Black America. Try to have things like the United
> Caucasian College Fund, Cloud Magazine, White Entertainment Television, or

> your door.

This is very very true.

> I have the right "NOT" to be tolerant of others because they are different,
> weird, or tick me off. When 70% of the people who get arrested are black, in
> cities where 70% of the population is black, that is not racial profiling,
> it is the law of statistics.

Right again. If you are swimming in the ocean and see a shark coming towards you, you will get the hell out of the water and judge it on the STEREOTYPE given to sharks, not be politically correct and hang around to judge him as an individual that may not kill you just because he is a shark. Stereotypes are statistical facts, not something pulled out of a hat at random.

> I know what sex is, and there are not varying degrees of it. If I received
> sex from one of my subordinates in my office, it wouldn't be a private
> matter or my personal business. I would be "FIRED" immediately!

If both of you consented to the sex, this is wrong.

> I believe that if you are selling me a milk shake, a pack of cigarettes, a
> newspaper or a hotel room, you must do it in English. As a matter of fact,
> if you want to be an American citizen you should speak English. My father
> and grandfather shouldn't have to die in vain so you can leave the countries
> you were born in to come over and disrespect ours.

Very true. Again, instead of uniting everyone to the same language, customs, and pride in our one country, we have separate groups of people with their own languages, customs and pride in their own nationalities instead of the county they live in, which is pulling this country down and destroying it. English is what our constitution is written in, our money is printed with, our street signs are made with, and what the pledge and national anthem are in.

> I think the police should have every right to shoot your sorry ass if you
> threaten them after they tell you to stop. If you can't understand the word
> "freeze" or "stop" in English, see the above lines.

True to a point. But when a cop is harassing you over a victimless crime, such as not wearing a seat belt, or being in possession of plant leaves that hurts no one else, then things are different. If you did nothing wrong to anyone else and a cop points a gun at you because you exercise your constitutional right to not only own but to bear arms, then that cop has no right to point his gun at you and you have a right to defend yourself.

> I feel much safer letting a machine with no political affiliation recount
> votes when needed. I know what the definition of lying is.

Voting is a waste of time. The majority of people voted for Gore last election, and the government decided to put Bush into office. Not only does your one vote not count, nobody's vote counted. People make fun of Iraq's election where Saddam was the only one on the ballot. I seem to remember many offices on my US ballot with Judges and such where there was only ONE person on the ballot too! At least in Iraq they had the choice to vote NO for saddam, there was no NO choice for me to punch on the US ballot. At least Saddam got 100% of the vote, Bush didn't even get a majority and was put into power. Which system is more screwed up?

> I don't think just because you were not born in this country, you are
> qualified for any special loan programs, government sponsored bank loans or
> tax breaks etc., so you can open a hotel, convenience store, trinket shop,
> or any other business.

This is exactly right. You want to know something interesting? All these points you make are exactly what Hitler realized and wrote in Mein Kampf. You might want to read that good book, that is if you can still find a copy in this country. Note also how many of the German people loved him and shouted in praise at what he would say and do for them. (Want to know what he said to them? A book of his speeches on Amazon.com or any local book store will cost you $600 to find out! This is the american way of censorship.) Bush and Clinton never get screams of hails and praise after any of their speeches. Our government likes to make Hitler and everyone else out to be evil and we get taught all these bad things about people, but if you do some research, you find out quite the opposite. Don't read any of the books on Hitler you find on the shelves in the bookstore, but DO note that they all are by Jewish authors that seem to write the books with some bias for some reason. The covers of the books calling Hitler a "diabolical madman" forewarns that you are not going to get any unbiased information here! Mein Kampf was written by Hitler himself, so this is really the only way you can find out the truth about how he thought and felt about things. There are three other books that he wrote, but for some reason they are not in print in this country. Seems our government doesn't want us reading any of those books anymore. I found one in a used book store, and I can see WHY they don't want us reading it! Seriously though, your statements here are in exact agreement with what Hitler said and did. This is not meant as an insult, quite the opposite. You really should read Mein Kampf, you would be surprised at how much it says exactly what you do.

> We did not go to the aid of certain foreign countries and risk our lives in
> wars to defend their freedoms so that decades later they could come over
> here and tell us our constitution is a living document and open to their
> interpretations.

Correct.

> I don't hate the rich. I don't pity the poor. I know wrestling is fake,
> but so are movies and television, and that doesn't stop you from watching
> them. I believe a self-righteous liberal or conservative with a cause is
> more dangerous than a Hell's Angel with an attitude.

No arguments.

> I think Bill Gates has every right to keep every penny he made and continue
> to make more. If it ticks you off, go and invent the next operating system
> that's better and put your name on the building.

Sounds fair.

> It doesn't take a whole village to raise a child right, but it does take a
> parent to stand up to the kid and smack his little ass when necessary and
> say "NO"

Man I am standing up and applauding now!

> I am sick of "Political Correctness" and of all the suck ups that go along
> with it.

Correctness is always better than "political correctness" which is a
contradictory term.

> I do not think any of us owe reparation to any one. I know a lot of black
> people, and not a single one of them was ever a slave, and I do not know
> any one who has ever owned a slave. We need to get over it already!!!

This is true. As much as the United States was founded by slave owners who used
ethnic cleansing to rid the land of native americans, you and I should not be
punished for their actions. We are being punished by never being given the
chance to have jobs like chief of police, judge, or anything in which a quota
says sorry, you don't have the right skin color, this job has to be given to a
black person. What did we do to get treated like this? Why is it not
illegal, but rather LEGAL discrimination?! Two wrongs don't make it right.
Just because the people who were guilty of discrimination before are dead and
can't be punished, stop going after someone else to take revenge for something
you never suffered. I wish I was black, then I could get a high paying job
without any fear of getting fired, as I would have Jesse Jackson to protect
me. Why doesn't that racist ever come to the defense of white people, only
blacks? Never once has he stood up for someone white, every single case has
been against blacks. If someone white did what he does to protect whites, then
this person would be called a racist and have death threats made against him and
possible arrested for "hate crimes."

> Why must it be, "African Americans", "Mexican Americans", "Asian
> Americans", etc. I don't go around saying I am European American just
> because my great great great great great Grandfather came here from Europe.

Right. You can only be a citizen of ONE country. PICK ONE! It is even MORE
insulting to put the other country BEFORE American, instead of say, "American
African" (like putting the US flag above the African one on a pole for respect,
the other way would be insulting and illegal) Also, did you ever call a
Jamaican an "African American"? They don't take to kindly to that stupid
phrase either! What do you call blacks that live in Germany or France?
"African Americans"? That would make no sense! Call them BLACKS or
NEGROS. It is the only thing that fits in all situations and does not insult
our country.

I'm sure this will become another CB urban legend, along with the "coax has
to be the right length" thing that always goes around.

900 MHz 8 Cavity Duplexer
Compact Duplexer with Circulator

This Duplexer came from an older 900 MHz linking radio system. It is presently tuned for 895.90 MHz TX and 934.70 RX, making it very suitable for the 900 MHz Ham band. It came out of service, so should be working fine, but it comes AS-IS.

$150 plus shipping

Well I hate to tell you this but the coax DOES have to be the right length,
otherwise it won't reach the antenna! ;^)

4803. Motorola Expo Question

Newsgroup: rec.radio.amateur.equipment
Date: 2002-10-24 19:19:44 UTC
From: paul_dokken@yahoo.com
Message-ID: <15cc39be.0210241119.7142acf1@posting.google.com>
Source record: 38012

I recently bought several Motorola Expo hand held radios. They did not come with batteries. Where is a good source to find batteries for these units? How much should I expect to pay? What frequencies do these radios use? Any information on this radio would be appreciated. I have never used a handheld radio before.

Thanks
Paul

Howdy,

I have an adapter which consists of a PL-259 and a Pair of binding posts.

Don't know who made it ro where I got it. I want another one.

Any help would be appreciated.

Sounds like the center of a DIY dipole antenna, I think.

Some coax to your rig, two wire lengths (at 1/4 wave for your favorite
band) on the binding posts, and a way to suspend it all, and you're
cooking.

Sounds like a hamfest item.

Happy trails,

Hi All,

Has anyone tried the HL50B on 160m ?

I've been wondering whether it would work since
it appears to have low pass filters rather than
band pass filters ??

Can someone try it into a dummy load and let
me know the out come please ?

If it does indeed do 160m I'll order one for my FT817 ...

Cheers!

MikeT ...

Message-ID: <nP_t9.200$EOT8.46137449@news2.randori.com>
Source record: 38024

I need the following frequencies for my Electra Bearcat III scanner...

155.415
153.980
157.450
155.340
155.055
39.500
159.210
453.250

Let me know if you have more than 1 of the above frequencies as I am putting together another Bearcat III for a friend of mine.

Now I have 4 crystals I do not need. If you guys want to work out a deal on them, that is fine with me. Like trading 1 for 1 or something. I need to keep this cheap. The frequencies for the 4 I don't need are...

47.69666
48.150
460.100
460.300
I should be getting more crystals from scanners I won I eBay and I will post them here in this thread.

Thanks,
BTJustice

>
>Any help would be appreciated.

Somebody else suggested Pomona (http://www.pomonaelectronics.com/)
as a possible origin.

I don't see anything quite like this in their on-line catalog... they
don't seem to have PL-259 connectors on any of their adapters.

They do have several BNC-to-binding-post adapters, though... their
#1296 is a male BNC to full-size binding posts (see the PDF writeup at
http://www.pomonaelectronics.com/pdf/d1296_1_02.pdf for details).

You could use one of these, plus a commonly-available PL-259 to BNC-female
adapter to do what you want, as long as you're not trying to handle
more power than a BNC can take (a few tens of watts?).

Mouser Electronics sells the #1296 for $11.20, or the #1452
(BNC-female to binding posts) for $9.40.

This implies that cable is made from the cut-off legs of old army
uniform pants, doesn't it?

One thing I always do when purchasing items on Ebay is to find the
same item at another place online and see what it would cost at a
retail place. That means I could go pick it up. If I can't get it
cheaper through Ebay adding in shipping I don't bid on it. I also
figure $2-5 is not savings enough to not have a store standing behind
the product.

4819. Question about TS-940 low output on CW mode

Newsgroup: rec.radio.amateur.equipment
Date: 2002-10-24 23:59:28 UTC
From: Chris <va3ut@rac.ca>
Message-ID: <CP%t9.11546$Kf.1380876@news20.bellglobal.com>
Source record: 38030

Hi,

Thank you for reading this posting. I have some problem with my TS-940S. It works fine with SSB on all bands, but the CW output is low. I don't know why and I don't know where to start with. CW waveform seems looking good and the receiver is good as well. Only the CW output power is low at around 50W with the Carrier all the way up.

Oh, one more thing. SSB works well, but the Processor doesn't seem to work properly. It works well without the Processor, but I get low power with the Processor on. Strange!

Thank you for reading this and I will appreciate any comment.

1. Code IS a digital mode
2. Code is the only digital mode that does not require extra equipment
(i.e. a computer) in the setup.
3. There have been and always will be occasions when other digital modes
fail yet CW will hold up.

I have watched this debate and comparison to other hobbies and none of the comparisons are really valid. Take the fishing one. Nobody is trying to take fishing privileges away from the people. By contrast ever since the beginning of radio, government and commercial interests have been trying to eliminate amateur radio. If you don't believe it, simply dig into the newspaper archives, the ARRL archives, and read the book "200 Meters and Down". We have to have something to offer and make it worthwhile to prevent the loss of these radio privileges.

One could take the time and show the lack of validity of the other comparisons too but I don't care to spend all night typing so one example should suffice.

Radio amateurs have successfully defended their existence by having something to offer. That is a trained pool of radio operators and individual experimentation and learning. To maintain this, standards are necessary. Life is all about standards. In many fields, one must meet standards to reap the benefits. This is true both in career pursuits (high school diplomas, college degrees, etc) and in hobby pursuits (amateur radio license, private pilot's license, hunter's courses).

You show your lack of experience here. It is not uncommon for the shortwave bands to be in poor enough shape that voice communications are not understandable. Under those conditions only digital gets through and of the digital, CW gets through the best.

Hmmm. Hang a multi-turn loop on the side of your house, hook it to a full-wave rectifier bridge using fast diodes, and at the very least you could keep your gel-cell batteries charged up. Might even be able to run your lighting, or even go off-grid entirely.

It would be tough to only be able to cook or shave when your neighbor keyed up, though.

OK, and Jimi Hendrix is still alive on that island in the So.Pacific.

Question: When a radio is in the transmit mode, how can you overload the front end of a receiver? When the T/R circuitry is in transmit, the receiver is out of series.

>Only the CW output power is low at around
>50W with the Carrier all the way up.

Are you referring to the Power level on the front? You can raise the maximum power level by using the Car Level slide control on the top of the unit under the little door where the VOX controls are. Push it all the way back.

Most of the transceivers do not have a relay but use a couple of diodes to
do the switching. They are low power units rated for only a few watts. If
you feed back 100 watts or so into the transceiver while it is transmitting
it would take out the diodes and maybe other devices.

> But..if you have independent trans/recever's,it could happen.

No it wouldn't because even if there were a separate transmitter and receiver the T/R relay between the two radios will only allow each to be engaged separately. When transmitting the receive side of the antenna is disengaged and out of series.....So much for the Trojan Mod. The original posting and this mod is someone's fantasy.....

Simple.

The disguised circuitry samples and stores the exciter's output frequency. When the sampled signal is compared to a list of allowable frequencies on a eprom chip, the circuitry either remains in the dormant mode or becomes destruct active. Once triggered, high voltage signal pulses are applied to the antenna line using the amplifiers own power supply. The pulse sequence only lasts a few milliseconds before the circuit slips back into sniff and search mode.

Mr Vanasse, may I call you Paul?

You see, I'm not a real General. In fact, I've never even been anywhere near the military in my whole life. Dropped out of high school when I was 15 and sold bags of pot along the streets of San Francisco back in the 60's.

I was married once but it didn't work out. My favorite color is green and I voted
for Bill Clinton twice. I've never seen an actual UFO but I have seen photographs
of pie plates hanging by fishing line tied to tree limbs. Boy did they look real.

Sure, go ahead and have a good laugh. Make fun of an old man just trying to help folks out by trying to stop senseless destruction of expensive electronic
equipment. Go ahead, poke me in the eye, I can handle it.

Sincerely,

General Johnson Jameson

The donations for this project came from a group of very
wealthy hams whom for obvious reasons wish to remain anonymous.

They have personally invested many thousands of dollars into
their " hobby " and unlike the FCC are attempting to cure a problem
that has become malignant and affects everybody.
Poorly designed, tuned and improperly used high-power amplifiers
cause havoc to government, aviation, hospital and industrial equipment.

Ask any pilot about spurious signals they have heard on their airplane
transceivers. Harmonic signals so loud they cover up tower
and plane to plane communications, making it impossible to communicate.
Imagine trying to determine where the plane is in front of you when a cb'er
running a few kilowatts decides to keyup and practice his whistling.

But hey, I'm just an old man with phony name and email address.
I'm full of crap and so are my posts. After all, it's just entertainment
right?

hugs and kisses

General Johnson Jameson

4844. FS: Yaesu FT-920 160-6 meter transceiver, Mint!

I have for sale the FT-920 transceiver in mint condition. Comes with several options - an Inrad 2.8 kHz SSB filter for the best audio on receiver and transmit and which actually has better ultimate rejection than the standard Yaesu 2.4 kHz it replaces. The 2.4 kHz filter is also included if you want to put it back or sell it. Also comes with TCXO-7 high-stabilty crystal oscillator, FM-1 FM board, and the Yaesu 6 kHz AM filter for the best SW listening and AM operation. Many, many features including IF shift, noise blanker, noise reduction, keypad, audio DSP (very effective), speech compressor, etc, etc. Read the 5/5 reviews on eham.net This rig is highly versatile and a pleasure to use. Comes with microphone, manual, and DC power cord. Will be carefully double-boxed for shipment. Please email me for photo. Asking $925 plus shipping. Thanks for looking.
73,
Bruce

Ok General, let's just say your story is true. Now if this circuitry does
work just like you say, what happens if the circuitry fails and starts
burning out radios when they are in the proper frequencies? How will
anyone know (us hams for one) how to fix this anti-freeband circuitry?

Though on the other hand hearing about a freebanders radio going up
in flames on say 27.555 MHz would be amusing. It kinda makes me
wish this wasn't just a urban myth wannabe.

Are you trying to build a retro-encoder out of discrete components, or are you trying to find an encoder to integrate into another project? If the former, find some electronics textbooks from the 60s and 70s like those written by Forrest Mims or Rufus Turner. If the latter, most repeater jockeys have made use of the products from Communications Specialists (e.g. the infamous TS-32P CTCSS encoder)...

Hi,
Galaxy Saturn Turbo has the same main board as RCI2950, but ... with deleted one of final transistors (2SC2312). The big power unit in this rig (added after the final transistor) is of a very low quality. The power supply DC unit inside this large case is also not the very best. A well tuned up RCI2950 will give to you MUCH MORE satisfaction, beeing also much more comfortable (little size case). I'm using a RCI2950 since 1990 and I'm very satisfied. Many times i had a sick "Turbos" on my table, my friends' properties. My advice is : be a owner of 2950 as long, as you can and never buy a "Turbo".
Best regards,
Chris,
Poland

I got MY General ticket in 1969 and upgraded to Extra in 1971.

If you're not a code enthusiast, there is very little to be gained by
getting the Extra. Most of the Extra privileges are in the lower
portions of the CW sub bands.

But for those you ARE code enthusiasts, those frequencies are very
valuable because that's where most of the DX is.

Upgrading is not about ego. It's about earning privileges.

It's known as incentive licensing. Even back before WWII there were
different classes of ham licences. If you read the FCC regulations as
to WHY amateur radio exists, one if the key reasons is to provide a
pool of technically capable people to serve the national interest.
Many electronic engineers started out as ham operators.

> This PROVES that it is only to divide Hams into different classes and groups
> so that some can feel more superior than others in the hobby.

Please elaborate on this. Are you saying that incentive licensing is
some sinister plot by the FCC to breed discontent among hams?

> I can understand
> why someone who wants to talk on shortwave would upgrade from Tech to General,
> but I can't for the life of me understand why someone would "upgrade" from
> General to Extra unless just to show off and feel better than a General class
> ham.

One reason to upgrade is to have access to the choice DX frequencies.
And with today's exams, what is so hard about passing a multiple
choice test where the exact questions and answers are published for
all to see? You might even learn something in the process. But I guess
folks today don't want to exert any effort at all.

I suppose you would like a no-code, no-theory license where you would
be issued a licence just for filling out a form with your name and
address. After all, you don't build your own radio. Why should you
have to learn all this boring technical stuff?

Wow this is a real good argument to the statement that was made. I guess this means you admit it is a fact since you try to change the subject rather than try to prove the statement false.

> If you read the FCC regulations as
> to WHY amateur radio exists,

Now if only you could research the early regulations as to why the morse code requirement existed! Here is a hint: It was NOT to make the license harder to get, it actually had a purpose. Hint #2: The reason for the requirement is no longer valid due to something the military did.

> > This PROVES that it is only to divide Hams into different classes and groups
> > so that some can feel more superior than others in the hobby.
>
> Please elaborate on this. Are you saying that incentive licensing is
> some sinister plot by the FCC to breed discontent among hams?

They just never cleaned up the the old laws and requirements that no longer apply. For instance, the fact that someone had to take a Novice test and learn about shortwave bands they are not even allowed to use as a Tech so that they could get their Technician's class license was idiotic. They finally realized this mistake, and eliminated the Novice class altogether as it made no sense to be tested on HF in order to get a license for VHF and above. Next year the mistake to have someone tested on code before they can use a microphone on HF will be cleared up as well. The government just always takes a long time to catch up to common sense, and they are always way behind.

Was it a sinister plot by the government to not allow blacks and women to vote to breed discontent among it's citizens? Or did it just take them a long time to figure out how stupid their rules were? If not for people like me to point out these stupid rules and laws, they would never get fixed. You sheep would just do as you are told and never speak up about anything that was wrong.

> > I can understand
> > why someone who wants to talk on shortwave would upgrade from Tech to General,

>
> One reason to upgrade is to have access to the choice DX frequencies.

They are only choice because no one else is allowed to use them. Think about it, you could make ALL HF frequencies off limits to Generals as well and then really improve them for DX use! The FACT is, when no one is using the bands, they get taken away and given to someone who WILL use them. Ham radio has shown that it really doesn't want those frequencies that it does not allow MOST of it's operators to use, even though they have been tested and shown to be qualified to use them as Generals that use those same bands that those frequencies are on. Wake up! Or soon YOU will be bitching and moaning why you can't use those frequencies either because they were taken away from Ham radio! Then it will be TOO LATE for you to come around to common sense.

> And with today's exams, what is so hard about passing a multiple
> choice test where the exact questions and answers are published for
> all to see? You might even learn something in the process. But I guess
> folks today don't want to exert any effort at all.

All the questions on the Extra were taken from the GROL exam that I took and passed. There is nothing that I am going to learn from taking the easier Extra test. It is not a point of it being any extra effort to get the Extra class license from General, it is the question of WHY would I get it when I get use of all the same bands NOW as a General?! Of course if you READ posts before you replied to them, you would have read this explanation the FIRST time.

Interesting too how no one is able to debate any of the facts being made, only snipping them out and attempts made to twist the direction of the argument to something unrelated or back to the old argument that was just disproved by the statement and post being replied to.

> I suppose you would like a no-code, no-theory license where you would
> be issued a licence just for filling out a form with your name and
> address.

You know what is ironic about that? The fact that getting a license for not amateur, but PROFESSIONAL COMMERCIAL radio stations using upto 50,000 watts or more WAS just a matter of filling out a form and getting your restricted permit! At first it was a Third class license in which you needed to be tested, then they reduced it to the form you fill out and sign certifying that you know what you are supposed to know and did not need to be tested. NOW you don't even need to fill out a form at all! Yet for an AMATEUR hobby license, for which some never use more than a 500 mW HT, they have to be tested and pass an exam. This somehow must make sense to people like yourself, but it sure doesn't seem to utilize any form of logic that I have heard of other than "fucked-up logic".

I'm not saying they should have eliminated the broadcast operator's license, or that they should eliminate testing for amateur licenses. BOTH have operators that are authorized to operate transmitters with a lot of power that could do some serious damage if they don't know something about it first! The POINT was (which you people never seem to grasp and you need to be tested on comprehension before you are allowed to reply on a newsgroup) that you don't need to be tested on things that

have nothing to do with what license and bands you want to access. You DON'T need to be tested on morse code if you want to use a microphone to talk, you don't need to be tested on additional theory and knowledge to be an Extra when as a General you were considered tested enough to operate the same power on the same bands!

This is like saying there is an EXTRA CLASS driver's license available. You get tested on ADDITIONAL traffic rules and theory for this license, but don't get to access any additional roads or travel at any higher speeds with this license, people just get them so that they can look down at people with the regular licenses and call them lazy! If the regular license was enough to allow someone to get behind the wheel and drive on the same roads as the Extra, what is the point in getting the Extra class license?

> After all, you don't build your own radio. Why should you
> have to learn all this boring technical stuff?

The technical stuff IS needed, you really don't get that do you? No matter what bands you use, you will ALWAYS be using a radio, so you should know about radios! You do not need to use morse code to operate a radio and use it with a microphone, so you don't need to know morse code to be a radio operator.

SIMPLE!

Here, let me set up some more examples for you and see if you can figure them out...

1) Does a ham radio operator need to know about antennas and be tested on this?
a) No, because sometimes you can use a radio without an antenna.
b) Yes, because ALL hams will be using antennas for all modes and bands.

2) Does a ham radio operator need to know about radio controlled airplanes and be tested on them?
a) Yes, because ALL hams will be using radio controlled airplanes, and they can be used in an emergency when the bands are noisy to send a note via radio controlled airmail.
b) No, because many hams will not ever buy or own a radio controlled airplane because one is not needed to operate a radio or participate in the hobby.

3) Should people be required to pass a test showing they know how to read and comprehend a post on a newsgroup before replying to it?
a) No, because everyone likes when people just post arguments that have nothing to do with the statements made and ask the same idiotic questions requiring the original poster to keep repeating the statements over and over again because the idiot did not read or comprehend them.
b) Yes, because those people who don't want to take and pass this test and just think anyone should be allowed to use a newsgroup without passing a test first are lazy people that never want to put any effort into anything. They feel that they should just be allowed to use the internet for free and no one should ever have to take any tests or get any licenses first.
c) Since no public safety bands are interfered with by idiots posting on newsgroups, and no one is in danger of any physical harm by them posting, no test is required, but it sure would be nice if everyone put in at least SOME effort to read and comprehend a post before hitting the reply button and starting an argument!

Don't peek! Answers are below.....

1) B
2) B
3) C

If you didn't get a 100% on this test, you should not be allowed to play with transmitters capable of hundreds of watts of power. Giving a transmitter to someone that can't pass this test, is like giving a loaded gun to someone who doesn't know what the hell it is.

Any replies to this that make statements without first reading and comprehending what was said here, will not be replied to by myself any further.

>
> Chris VA3UT

Chris,

The power level that you can achieve on SSB would
lead me to suspect that someone has mis-adjusted
the ALC circuit to get more SSB power. This has
probably screwed up the CW power adjustments.

An alignment is probably called for. A properly adjusted
940 will get only about 100 watts both SSB and CW.
The manual calls for an output of 110 watts CW.
VR2 on the control board sets this. VR2 is on the bottom
of the radio, on the control board. I would not adjust
this thing too much or your likely to end up worse than
you started.

Check with Cliff at AVVID. He monitors the Kenwood
reflector available on QTH.net.

In this area as in any other-
Some people do their best and work to achieve for its own sake.
Others whine and make excuses.
Some take responsibility for themselves and climb their personal
mountains.
Others blame everyone but themselves.

Dave AB5S
p.s. I supported the reduction in code speed, even though I'm a
20 WPM Extra. I don't support its elimination. I do believe
the code seperates those who work from those who whine,
the winners from the wannabes.
I'll cast my lot with the workers, thanks.

4861. Frequency counter vs. scanner

If I have a hand-held, very accurate all-band, all-mode scanner, do I need a frequency counter? I would use it to set or measure a QRP radio's frequency -- which I seem to be able to do with the scanner.

Apparently this is the same reason everyone else did too as there AREN'T any
extra privileges!

Now, what is stopping you from learning and being tested on a 50wpm test, as
well as some additional theory that was not included on the Extra, and in
return, you will get an EXTRA EXTRA CLASS license that will allow you to use the
same bands you are now using? Why are you stopping at the Extra class?
LAZY?
Why are you not learning and mastering the Russian language in your spare
time? And brain surgery? Don't give any lame excuses about not needing to
learn them because you have no intentions of using them, that is just the LAZY
man's way out! What if one day you are stranded in Russia and your loved one
falls down and needs brain surgery and there are no other brain surgeons around
for hundreds of miles?

As I stated previously, everything is being done anonymously.
If the user stays within legal band edges, including mars/cap
frequencies, the programming on the eprom, which by the way
has been cleverly shielded from stray RF from what the designers
have told me, will never know it's even installed. A fail-safe design
insures that upon power-up, an internal self-diagnostics program
runs to insure that the unit is operating within design parameters.

Is this legal? Is using a RF amplifier on 11 meters legal? Of course not.
If such a device caused damage to your equipment, you could collect for
damages in civil court providing you could prove how the damage occurred
and could identify the party who sold you the amplifier. You would also have
to show the court that the selling party knew it was installed and that
he or she had criminal intentions to defraud or cause physical damage to
your equipment. Bottom line, no attorney worth his salt would take this case
and you'd be laughed out of small claims court just trying to explain the
" star wars " device hidden somewhere in your amplifier.

Hi Walt -

The black wire is referred to in the assembly instructions on pages 31 and 45. It is also shown in pictorials 5-4 and 6-11. Note that there is also an L6 shown in pictorials 5-2, 5-3 and 5-4. This is the 10 meter input coil and is even referred to as such on page 30. The black wire shorts it out.

L6 should be peaked up on 10m following the obvious extension of the procedures outlined on page 55. However, it doesn't sound like thats your problem. If you are able to drive the amp to significant plate current but output is low, the problem is certainly in the output tank circuit. Can't guess what it might be.

There is no other 10m mod that I know of. I had the black wire mod in hand before I built my amp and just simply didn't install it. The amp tunes up on 10m just fine although I have tried to use it there only once. The rf got into the horizontal sweep of the TV in the next room and caused it to shut down. Very unpopular with the rest of the family who were trying to watch a football game and probably not good for the TV set, either!

Good luck.

Looks and works great.
It will do 2 meter and 440 at the same time.
100.000 to 985.000 mhz
Come with 2-5 watt batteries.
One with a charger the other is a w&w 104s 12volt 1200 mah.
This one needs a drop in charger wich i don't have.
Comes with belt clip rubber duck and manual in pdf format.
$150 shipped u.s only ups insured.
E-mail me for a picture of the ht.

Once upon a time, I was given a CW test by the Navy...I got 1 of 50
correct. They ended up sending me to Russian language school.

The guys I worked with later were copying CW at 30-40WPM. I was glad
I had been sent to language school...much easier!

It depends on how accurate you want to be. Does your scanner resolve down to less than 50-100 cycles? Does it drift with temperature changes or is it using a TCXO for stability?

Personally, I want to know my transmissions are as close to the indicated frequency as possible, especially for CW or SSB work. However, if you are only working AM or FM modes, then it is not as critical.

Art, I studied code until I was blue in the face but couldn't get above that 18 word per min. level.

I am happy to pat any one on the back for doing so.

But ham radio isn't all about passing a code test or even using it on the air as the majority of us will attest too.

The people here that have taken some of the posts on this thread to heart seem to be extra class hams. It's not about being nasty, it's just a discussion and we all have our opinions.

Well i'm going back to the major subject of this newsgroup - scanners.

Have a positive day and "God Bless America" for the right to exercise my opinion openly.

Dan, take all this for what it's worth(not much) just look at the spelling, grammar, etc. in most of the replies!
Most of the replies are negative and in your direction, but I can assure you if the shoe was on the other foot these same people would probably have a stroke over it, esp. someone stupid enough to use an acronym of profanity(F Q T) for their nickname on this board instead of having the courage to be known. Also I have a hard time beleiving someone is "drawn" away to a place so "secure" they have no access to e-mail for over a week, even the pres. dosen't live this secluded, makes you wonder doesn't it?
Oh well hope this transaction turns out okay for all concerned.

The statement regarding the police not needing code, because the FM mode that they use, is kind of off topic. Anyway, I remember an incident in the early 70s, where a Hillside Illinois police officer routinely pulled over a motorist. He ended up getting abducted by the motorist, and later killed. He tried to call for help on the local frequency (155.49MHz), and was covered up by other traffic sharing that frequency. It was because of the capture effect that FM exhibits that he wasn't heard. Also, there were around 20 local towns on that frequency. After that incident, many of the towns switched to 155.64MHz, to alleviate that problem. Too late for this poor fellow, but hopefully, it helped prevent future incidents. The digital modes used in the land mobile service help out, but if a signal gets too weak, the BER (Bit Error Rate) suffers.
As far as the code.....maybe it shouldn't be pushed down peoples' throats, but it can be a handy mode, and in a life or death situation, it could be the only thing that could help. The sound of an SOS is unmistakable, and with the direction finding equipment currently available, chances of locating you are pretty good. The current equipment will provide a bearing on the signal as soon as a transmission is detected. If two SAR units are involved, simple triangulation would provide an accurate location of the transmitter. This is, of course, negleting the effects of ionospheric phase shift.

Geez, you sound worse than my sister-in-laws 3 year old! I never use am,
sstv, amtor, pactor, rtty, etc. and I had to be tested on them, many of them
are nearly as antiquated as cw. Why does the FCC test us concerning them??
Because they want us to know something about the modes we can use, the only
difference between cw and the others is that proficiency is shown by
receiving and writing it down rather than just basic memorization. Your
lack of real logic is appalling and you've deceived yourself because of your
obvious hatred of cw and anyone who has more than you.

You hit the nail right on the head. Two of my kids passed their Tech Plus license when they were nine years old. My daughter got 100 percent on the written test, my son got one question wrong. But there were adults at the session who failed miserably. Why? I suspect they just picked up a "study guide" at Radio Shack and skimmed through it for an hour or so before taking the test.

It's amazing. People now have access to the exact questions that are going to be on the test, and they still aren't willing to spend enough time to get a passing grade. That speaks volumes about their commitment. Seems like the easier it becomes to get a license, the more some people whine!

For me the code test was the hardest test I've ever taken in my life. And it took me 3 years of study just to get to that point. Now I'm working on the General upgrade and kicking myself because I miss 2 to3 questions on the practice tests, but I keep on studying.

I read once that Larry Bird (who just lives 10 miles away from here BTW) would stand in his back yard and shoot free-throws until he had made 10 in a row without touching the rim. He WANTED to play basketball and worked to get what he wanted.

That is the reason that so many people fail on the tests it's not anything more than how much they WANT to be a ham and are willing to work to get what they want! The whiners and those who fail do so because if they can get it for nothing (work or money expense) they'll take it but if it costs something (time or trouble) they don't care anymore!

I recently bought several Motorola Expo hand held radios. They did not come with batteries. Where is a good source to find batteries for these units? How much should I expect to pay? What frequencies do these radios use? Any information on this radio would be appreciated. I have never used a handheld radio before.

Thanks
Paul

I'm not changing the subject at all. The question asked why the requirements for the Extra are tougher than the General. The answer is that the FCC uses the license structure as a means to encourage hams to increase their knowledge. This is consistent with the "Basis and Purpose" of amateur radio as defined in the first section of Part 97 of the rules. Extra operating privileges are used as an incentive to learn more. The incentive in this case is access to a wider range of frequencies within the band. You might not like it, but that's the answer to the question.

> > > This PROVES that it is only to divide Hams into different classes and
groups

>
> They just never cleaned up the the old laws and requirements that no
longer apply.

WHAT? There was a MAJOR RESTRUCTURING of amateur radio in 2000. Basically, there was a complete rewrite of Part 97. They cleaned up everything that needed to be cleaned.

Now there are only three license classes available. The statement I disagree with is that the license structure exists "only to divide Hams into different classes and groups so that some can feel more superior than others in the hobby." The purpose of the different classes is to provide rewards for those who earn them.

> Was it a sinister plot by the government to not allow blacks and women to
vote to
> breed discontent among it's citizens?

This is a ridiculous comparison! Stay on the topic.

> > One reason to upgrade is to have access to the choice DX frequencies.
>
> They are only choice because no one else is allowed to use them.

You can use them. All you have to do is pass the test. But you say below, you don't care enough about those frequencies to take the test.

> It is not a point of it being any extra effort to get the Extra class

4886. Heathkit GR-78 Battery

Newsgroup: rec.radio.amateur.equipment
Date: 2002-10-25 19:41:08 UTC
From: "Gary \"Joe\" Mayfield" <gary_mayfield@hotmail.com>
Message-ID: <urj7ka4p5fu216@corp.supernews.com>
Source record: 37997

I'm restoring a GR-78. Fortunatly someone removed the battery years ago. I know the original battery was a NiCad (I plan to use one too). I can also tell the battery is "split" in other words charged as two batteries, then used as one battery. Does anyone know how many cells this battery has? A first guess looks like 4 cells on each side. In other words an 8 cell / 10 Volt battery. This sounds odd so I thought I would ask if anyone knows for sure.

Thanks,
Gary

I wasn't arguing with you. I just thought it was stupid to call someone a lier and a rip off. Especially when the post of the alert was less then a 8 day transaction. Hell Some radio equipment I sent to the states somehow took longer then 2 weeks. I gave the guy some money back. I did pay for the parcel to go airmail too. All I am saying is that it was rude to put this non paying alert when there wasn't even a grace period of waiting. After 2 weeks I would of complained.

I received 3 more scanners today and pulled the crystals out of them. I now have this list of Bearcat crystals I want to trade for the frequencies listed in the other post below...

33.940
33.940
39.780
39.820
45.220
46.380
153.890 (47.69666)
154.250 (47.81667)
154.740
154.755
154.860
155.010
155.100 (48.10000)
155.250 (48.15000)
155.250
155.580
159.090
162.475
453.500
460.025
460.100
460.150 (49.92778)
460.300
460.375 (49.95278)

Wealthy hams!.....LOL. Gee's General, now you're really taking a trip to Fantasy Island. Lets see if we get this one straight.....The same guys that nickel and dime you over at the local hamfest by trying to get a $1500 radio for $200 are secretly financing and deploying this modification of yours?? That's a real good one.

I know this one supposedly wealthy ham that's been waiting a year for $6.00 Silver PL-259's to be marked down to $3.50 a piece so he can buy the 3 or 4 that he desperately needs.....These are the guys running this clandestine Trojan operation?

The phrase "Wealthy Hams" is an oxymoron.

Uh, I don't know how to break this to you Tikie but these are called "Phone" awards. Got one of 'em here on the wall right next to the "CW" award. They've got them for RTTY too but I never tried for one of those, even though I had to answer questions about it on my Extra class exam. That would be the one with 20 wpm solid-copy code, taken before an FCC examiner; no memorizing the question pool or paying off the VE allowed.

Yep, those were the days Wes, a 'real' FCC examiner staring one down.
They were damn intimidating too. Back when you had to draw out schematics
also... what fun it was.

From: jeff <wd4nmq@earthlink.net>
Message-ID: <3DB9CF4B.9070806@earthlink.net>
Source record: 37907

Antbody know of any open source radio control software for the Ten-Tec Pegasus/Jupiter radios.

Thinking about one for our club as a remote base. I downloaded the Pegasus .pdf manual from Ten-Tec and it made no sense on their equations. I couldn't even get them to match what they had in their tables.

I looked at their C++ app and it was so convoluted it gave me a headache.

Please don't send replys on where to buy Windows software.
It will be done in Linux. Windows is to unstable. Plus, I buy no software I don't get the source code to. To fix bugs and modify to my specifications.

just the LAZY
> man's way out!

The difference is that he is not sitting here complaining that they won't let him do brain surgery, nor is he demanding that they change the rules to let him perform brain surgery without taking the exams.

We had that once, just purchase the radio and along with it came
the application, fill it out, send it in and you got a license
with a callsigh, you know...the Citizen's Band. And you see what a
sewer pit of radio communications it is now.

Maybe this is too obvious but
Is the bandswitch in the (unmarked) 10M position?
I too when I built one simply left off the wire and the amp worked fine
on 10M at full power.

I'm a [head] VE/CE... We do both Amateur and Commercial exams. One session, myself and 2 other guys, both Amateur Extras and holding Commercial FCC Licenses were conducting exam with about 16 applicants. A lady came in to test for her Tech. She said "I've been in radio for 25 years, I bet I know more than all 3 of you put together." My reply, "Well, you should do real well - my licenses are in my wallet, so I am not the one who has to prove anything". She BOMBED the NOVICE written, NOT ONCE, THREE TIMES. Being embarrassed (I suppose), she requested taking it the extra two times to "try" to pass. So much for knowing it all! WE got accused of causing her to fail. WHY? Because WE asked for the ID as the FCC requires. It got her all shook up. Boo Hoo!

We've tested literally hundreds. You can tell who studied and who didn't. I did have one young boy fail once after having done so well on computer at home - according to his parents. I asked him what happened? He "got scared". I told him to relax and forget we were there. Place himself at his computer. In his second attempt, he passed with flying colors. He was about 10. So, YOU CAN PASS "IF" YOU STUDY.....

This truly is the dumbing down of America.... When I tested, I didn't have a book with ALL the "possible questions and answers". Nor were there computers let alone programs to help prepare. YOU HAD TO KNOW IT. If you didn't know theory, rules, etc, you just wasted your time and trip going to an FCC Exam site.

Come on people, it isn't any harder than studying a driving manual. YOU GOT TO WANT IT! Don't you have any pride in what you can accomplish with some effort?

Could also have been manufactured in Jan 83

There is nothing to tell the first part of the year, unless you know for
a fact that the model number was never manufactured in a certain year.

Can you believe what they want for those little boogers now? A single
PL-259 without the rg-58 reducer goes for $3.99 EACH at Radio Shack now.

I remember when they came in pairs and went for $1.99. Of course if you
waited till the local hamswap came around they were 25 cents each or less
depending on your bartering skills.

Times just ain't what they used to be, are they?

HELP

A local FM radio station , KCQQ 106.5 in Davenport, Iowa is having an internet poll to select a vehicle that will be the target of a pumpkin drop.

The pumpkin set the record for the largest pumpkin grown in Iowa.

They are going to lift it with a crane, and drop it from 80 feet.

My pickup is one of the 7 vehicles they selected to be in the poll.

Actually, it is number 7.

A video of the vehicle being crushed by the pumpkin will be posted afterwards.

Of the 7 vehicles, only two are really competing. Me and an astrovan.

The key is the web server hosting the web poll allows 15 votes per IP address. It is a free for all, and it is boiling down to how many people we can get to vote for us.

I'm to the point of begging now, because I'm loosing.

The voting ends Monday morning.

http://www.twodorks.com/frontpage/pumpkindrop/index.htm

Please vote for my "bad truck" (car 7)

thanks,

Dave
N9HUR

If they aren't silver-teflon, they aren't worth any price.
By the time you get them hot enough to properly solder in an RG-8 size
braid, they're melting the center insulator. Those shiny plated ones are
also tough to get the solder to adhere to, but the silver teflon ones just
flow.

There aren't? What about 3.500-3.525, 3.750-3.775, 7.000-7.025,
14.000-14.025, 14.150-14.175, 21.000-21.025, 21.200-21.225. I guess
these are just figments of our imagination.
>
> Now, what is stopping you from learning and being tested on a 50wpm test, as
> well as some additional theory that was not included on the Extra, and in
> return, you will get an EXTRA EXTRA CLASS license that will allow you to use the
> same bands you are now using?

I'm game. And I can pass the 50 wpm test now. Will this give me
broadcast privileges on 41 meters? A MW allocation? I'll take a clear
channel, thank you. I want to play "Art Bell".
I think 730 kc would have a good ring to it...I also want to be able
to play rock -n- roll oldies on the shortwave bands. I think 7373 kc
has a good ring to it.
If this new class comes into existence, I guess I'll have to come on
here and ask donations for a new 50 kw continental transmitter that
would befit my new EXTRA, EXTRA, status. Of course, these donations
would be tax deductable. I'll also send free propellerhead caps with
blinking red LED's on the rims to all donation senders over $100.
Donations over $500 will include a 1/4 wave 2m vertical attached to
the top. These should be a hit at the hamfests, and should become a
collectors item in the future. MK

4910. Need picture of your (big) shack

Newsgroup: rec.radio.amateur.equipment
Date: 2002-10-26 09:35:47 UTC
From: Thierry Lombry <lombryt@hotmail.com>
Message-ID: <3dba61b9_2@news.vo.lu>
Source record: 37921

Hi,

I would to publish a web page on my site
http://www.astrosurf.com/lombry/menu-qsl.htm showing radio shacks, to show to the novice and all curious what is the working environment of hams, what your are able to build or ...accumulate in your shack, Hi !

I am specially searching pictures with the OM/YL in front of his radio, but not pictures of light, "simple" shack like mine.
So NOT picture like these (even if expensive and if you proud of it, Hi) :
http://www.astrosurf.com/lombry/qsl-hamspirit.htm ,
http://www.astrosurf.com/lombry/qsl-propa.htm , or
http://www.astrosurf.com/lombry/qsl-confirmed-2.htm

But rather shacks like these ones :
http://www.radioamateur.org/albums/stations/F5OZK.jpg
or if you know them, similar to the shacks of A71MA, 9K2OK, K4JAD, W4NFR, VE3SY... (see QRZ.com)

Only for the fun I would like to highlight the biggest and most complete shack ever assemblied, the most "modern", accumulating on the wall of your room rigs and other devices, placing your RTX and accessories in racks, picture of shacks using at least 2 superposed racks and more (sorry for the small configs...), covering the wall with awards and cups, etc.

If you have to take a new picture, try to sort or arrange a bit your shack, that's look better...

Any picture from ANY station (worldwide) in JPG or GIF format is welcome.

They will be presented in size of about 100 pixels high and at their maximum size (say about half a screen) once clicking on the picture.
Your callsign and a link to your website (if relevant) will be add below each picture as I do usually on my website). So do not forget to give me your URL.

Send your pic to my public url lombryt@hotmail.com

Do not worry about the colors or format of your pic (of course do for the best in providing me a "good picture" as draft) as I work also with some image processing software and I can correct most artefacts quite easily.

Thanks in advance for your help.

A+
Thierry

What's even worse are those who feel others are given favorable treatment while they themselves are "not allowed" certain privileges. That is a loser's mentality. They can't even conceive of going out and earning what they want.

If anything, it is easier than ever to get an Extra Class license. VE sessions are numerous and conveniently located in most areas. The 20 wpm code requirement has been eliminated. New applicants no longer need to take the Advanced Class exam. And the exact questions/answers are published. None of those advantages existed when I took the test.

I looked up the 3CX1500A7 tube just for kicks. My book only goes to the 3CX1200A7 and it takes 7.5 volts @21 amps (157.7 watts) for the filaments and 5000 volts @800 ma on the plate, 4KW input! Three of them would run 12 KW input with an output of 4500 watts. The number after the "X" on these tubes always depicts the plate dissipation and which approximates the output, not actually, it just figures out that way. This moron selling this furnace, is going to a 3CX10000......It is an expensive way to heat his house. Guess he doesn't know what the amateur power limits are....he's probably a xxx anyway and doesn't know the difference between 5 watts and 5KW except for two letters.

I soldered my first PL-259 way back in 1967 and have been burning
my fingers ever since. When the satellite TV craze hit in the 80's,
I learned about a new connector to hate, Soldering N connectors to
make pigtails. I found the best way to get solder to flow on any connector
was to swab a little solder paste on them. Includes the coax braid as well.

Can you imagine a world where there isn't the smoke of solder slowly
floating upward, into nostrils, lungs and eyes? I certainly can't!

The General's laboratory is constantly adrift with floating clouds of solder
and paste flux smoke. A beautiful sight to behold!

I'm sure there are many who don't realize that there was a time when you had to get up and leave at 5AM for a trip to the FCC field office to take the exams and that they were generally given only one day a month in a few locations and once every six months in other locations. With that much effort expended just to get there I expect most people tried to make sure they were prepared.

Personally, I think there should be a minimum time requirement between license classes. While there is no practical way to ensure that they gain any on the air experience during the waiting period, the majority of people probably would.

Do you have a need for a high-quality SMA-to-BNC antenna adapter that
is custom made to fit and protect your H.T. or scanner radio?

Adapter allows you to:
Quickly change antennas to base, mobile or different style use.
Use the more popular and wider selection available of BNC antennas.
Prevent chassis connector wear or from coming loose due to antenna
changes.

Adapter features:
Gold plated contacts with a teflon insulator.
A low profile design with a rubber covering for a factory antenna look.
The rubber base seals to the top of the radio with no spacers needed
for moisture and dirt protection.
The base also provides an excellent support for any length of antenna
or application.
No need to remove adapter once installed to make a quick and safe
antenna change.

Sizes to fit radio models:
Yaesu: VX-5, VX-1, FT-50-R, VX-10, VX-150, VX-110, VXA-100, VXA-120
Icom: IC-T90, IC-T8A, IC-T81A, IC-Q7A, IC-R2
Kenwood: TH-D7, TH-G71, TH-F6A, TH-F7A
Alinco: DJ-V5, DJ-X3, DJ-S40
Standard: C508A, C510A
Radio Shack: HTX-420, HTX-400, HTX-245, HTX-200
Aor: AR-16

Previewed in the May 2000 Issue of CQ Magazine, and the Nov. 2000

FOR SALE:

Beautiful Lafayette HE-45B transceiver for 6 meter AM.
A very desirable classic radio.
15 watts to a 2E26 final tube. Modulated by a 7868
Built-in both power supplies for 120V AC and 12V DC.

Excellent condition. No rust, dents or scratches.
120V AC operation with built-in speaker and many other
nice features. Has 1uV sensitivity, noise limiter etc.
Fully operational. All original knobs. No modifications.
Dimensions 12-1/2" wide X 5-1/2" high X 8" deep.

This one is in showroom condition and comes complete with
manual copy, including schematic and parts list etc.
Comes with a brand new crystal for 50.4 MHz installed
and ready to go.

Will sell for $85.00 plus shipping

E-mail me for a picture or to arrange purchase

>Art Harris N2AH

Mr. Harris,
Your position on this issue is becoming very clear. Code is easy.
Laziness is the ONLY reason for inability.

This simply isn't so. There are large classes of people who CAN'T learn
code. Autistics can't at all. Asbergers' people usually can't.

If your position were accurate, the intense code schools the military ran
during WWII had a 100% graduation rates. We all know, that even after
screening students for code ability, many failed out.

Copying code is, like sight-reading music, a talent that exists because
activity between the brain's two hemispheres is organized a certain way.
Folks with a different organization can't get good at it, and practice
doesn't really help.

The problem with these facts, which causes people like you to reject them,
is that they reframe the 'code/nocode' debate from being about work ethic,
and into being about discrimination. I agree with you that, before maybe
1960, CW was such a large part of hamming that the exclusion of those who
couldn't do it well was justified. But, it hasn't been 1960 for a very
long time, and you need to stop running down those who are differently
abled.

What the 'code/nocode' debate is actually about is whether the bandplans
should continue to be slanted so much in favor of the CW operators,
whether the small & shrinking CW community should continue to monopolize
48% of the bandwidth below 25MHz (excluding 30 meters, a special case.)
Nobody is talking about outlawing CW, just about dropping the fiction
that it constituting about half of all hamming.

If your position is that the elimination of morse as a license requirement
will result in its virtual disappearance from the bands, I think that's MY
point. We only disagree about whether that's good or bad.

I agree that everyone is not wired the same. When my kids were learning the code, my daughter picked it up much easier than my son, while my son had an easier time with the theory. And for those who have trouble with the code, I'm sure there are different degrees of difficulty.

> The problem with these facts, which causes people like you to reject them,

> abled.

I certainly don't want to bar anyone from ham radio because they have a physical condition that makes passing the code test extremely difficult or impossible. VE's are required to make accomodations for people with physical or other conditions. In some cases, a sending test can be substituted for a receiving test. Sometimes the letters can be sent one at a time at whatever rate the applicant can respond to. In extreme cases the test can be waived altogether if the condition is properly documented.

The FCC's position has been that they want people with disabilities to at least make an attempt at learning the code. The 5 wpm level can often be achieved (albeit with difficulty) in many cases as you have demonstrated.

I can remember having a CW contact at about 30 wpm with a fellow who was both deaf and blind. He copied the code by placing his fingers on the speaker cone and feeling the vibrations. Granted, that is a different condition than you describe, but remarkable just the same.

However, I believe that most of those complaining the loudest about the code do not have such disabilities, but rather just don't wish to expend the necessary effort. And I have no doubt that some prospective hams even cajoled their doctors into writing bogus notes for them for the purpose of evading the code test.

> What the 'code/nocode' debate is actually about is whether the bandplans
> should continue to be slanted so much in favor of the CW operators,
> whether the small & shrinking CW community should continue to monopolize
> 48% of the bandwidth below 25MHz (excluding 30 meters, a special case.)

That 48 percent number is very misleading. If you study the ARRL bandplans, you will see large portions of the "CW" bands designated for AMTOR, PACTOR, RTTY, beacons, etc. On the 20 meter band for example, the General Class CW operator is limited to about 35 kHz (14.025 to 14.060 MHz). On the 40 meter band, Canadian phone stations are operating as low as 7.040 MHz. And the ARRL has proposed some expansion of the U.S. phone bands.

> Nobody is talking about outlawing CW, just about dropping the fiction
> that it constituting about half of all hamming.

I hear this agument all the time. "No one is going to stop you from operating CW as long as you want to." But remember, CW is a language. And if newcomers aren't required to learn it, most will probably choose not to. Then incrementally, the CW sub bands will be shrunk until they disappear. The No-code lobby would have more crediblility if they DID call for making CW illegal.

> If your position is that the elimination of morse as a license requirement

For properly documented handicaps such as these, accommodations/exceptions
can be made.

>
> If your position were accurate, the intense code schools the military ran
> during WWII had a 100% graduation rates. We all know, that even after
> screening students for code ability, many failed out.

They were looking for a much higher level of expertise such as being able to
copy random letters at high speed. This was necessary due to the encryption
of sensitive materials. Also they were trying to train people on a very
short time table. Thus a normal person would probably flunk even though
they could master morse code for plain text and only the gifted would make
it. That they basically ended up with only the gifted doesn't mean normal
people couldn't learn code.

>
> Copying code is, like sight-reading music, a talent that exists because
> activity between the brain's two hemispheres is organized a certain way.

I've yet to find anyone that can't achieve a basic, bare minimum in either
one. No one says you have to be a professional level symphony player.

>
> R F Wieland
> Electrical (Electronic) Engineer

> Apparent Asberger's sufferer

"Apparent"?? Have you been tested or is this a self-diagnosis?

Also how much time did you actually devote to learning the code. Those
people who I've met that "can't learn code" turn out to have spent
insufficient time at it because they observed a few hyper-talented people
learn it in what would be an unreasonably short time for any normal person.
I've asked them how much time they spent at it and how steady a schedule
they had (practicing once or twice a month or even once a week isn't going
to get it)

Unrealistic expectations cause more people to fail to learn coded than any other reason. They just don't put in the time. The average person needs 30 hours of learning and training to reach 5 wpm. A statistical spread would then have a variation of from about 15 to 60 hours. It took me closer to the 60 even though I'm musically trained and supposedly should have had an easier time. For my 20 wpm, it took me about 300 hours of practice, average is about 250 hours. This means a normal person might take anywhere from 125 to 500 hours to reach 20wpm.

Dee Flint, N8UZE.

Snipped all the recent conversation about CW to ask an ignorant newbie question.

CW is used internationally, but how does it translate when the characters used by English speakers are received by someone in, say, Bahrain, where Arabic is spoken? In other words, how does a non-English speaker, who does not use the Roman alphabet, learn and use the code? Are the many abbreviations that code uses, universal?

Hey Fah Q Too,

just write something about the catholic church leadership
ALLOWING and IGNORING all those pedophile priests
that raped all those little boys.

i did and the asshole dropped the argument.

must be his problem ... when he was a young alter boy
he must have fallen in love with the padre who raped him
and then left him for a younger alter boy. he's still bitter after all
these years.

Hello dear OM,

I is allowed to write to you to put a question about Yaesu FT726r.

I have this transceiver recently, and it has a problem in the mode CW Above all, I wish to know if, once the key CW selected, when you handle your key do you have a monitoring of telegraphy?

Second question, about my station, when I activate the PTT in CW mode the signal on the S-Meter goes up to 9 and PO is on 8, the station seems to pass in emission but not in telegraphy, it is carrying which is sent: - (do you know the problem?)

In advance thank you for your assistance, so long

From: Rod KI0KT <rliebeg@spininternet.com>
Message-ID: <3DBBE267.DD1FDC6@spininternet.com>
Source record: 37864

Does anyone know if you can modify the Icom 47A to use the 430-440 portion instead of the 440-450 potion of the band?? If so can you let me know or point me to the correct link.. I have looked in most of the modification sites and haven't found anything..

Thanks Rod KI0KT

Try your sewing machine. If you don't have one of those, get yourself an old plastic tablecloth, plastic material on one side, very thin cloth-like material on the other side, and find someone, wife, mother, aunt, girlfriend, etc., to make one for you.

That's what my wife did for my Heathkit SB-104A and matching equipment. It was not very difficult, in her words, anyway. She just covered the two sides, the front and the top, leaving the back open because of all the wires and cables plugged in back there. Mostly it was just folding the two corners at the top front and stitching it. You dont really have to make any cuts except for cutting to size. You could almost "stitch" it with a few safety pins.

Anyway, hope that gives you an idea to tide you over until you can find "professional" dust covers. You're right. I remember those things being advertised in QST some years back. Don't see them any more. The radios today can almost be covered with a sheet of paper, i.e., the FT-817.

Good luck,

Turner - WA4MQY

During my time at Icom, I don't remember such a modification being
available. Seems to me the frequency coverage in that vintage radio
was burned into the firmware and not as flexible as today's products.

4961. TRA-4 Rotor Controller Info Needed

Newsgroup: rec.radio.amateur.equipment
Date: 2002-10-27 16:33:18 UTC
From: Ron <news2@remthis.rongross.com>
Message-ID: <izUu9.858$rw1.75224365@newssvr13.news.prodigy.com>
Source record: 37872

I have a TRA-4 rotor (as stamped on the bottom rim of the top housing), not sure of the manufacturer. It has has no controller. It is a 4 wire rotor. It looks just like the one on the top/right of Norms rotor repair page....

http://www.rotorservice.com/

....except it is not a tower mount, rather, a pole mount version.

I am wondering if anyone has the schematic to or any advice on building a simple controller to allow the rotor to be used manually. I have looked at Norms repair site, but don't find any info there, just repair prices.

Thanks for any info one may have....Ron

Morse code requires a certain amount of dedication and patience.
Many people who lack these attributes can't even appreciate anything
to any depth. It has been universally decided by those with little
interest that these attributes are not necessary for the continued
existence of Ham Radio, so the code speed and testing has been
dropped accordingly.

: > There are large classes of people who CAN'T learn
: > code. Autistics can't at all. Asbergers' people usually can't.
:
: > Copying code is, like sight-reading music, a talent that exists because
: > activity between the brain's two hemispheres is organized a certain way.
: > Folks with a different organization can't get good at it, and practice
: > doesn't really help.
:
: I agree that everyone is not wired the same. When my kids were learning the
: code, my daughter picked it up much easier than my son, while my son had an
: easier time with the theory. And for those who have trouble with the code,
: I'm sure there are different degrees of difficulty.
:
: > The problem with these facts, which causes people like you to reject them,
: > is that they reframe the 'code/nocode' debate from being about work ethic,
: > and into being about discrimination. I agree with you that, before maybe
: > 1960, CW was such a large part of hamming that the exclusion of those who
: > couldn't do it well was justified. But, it hasn't been 1960 for a very
: > long time, and you need to stop running down those who are differently
: > abled.
:
: I certainly don't want to bar anyone from ham radio because they have a
: physical condition that makes passing the code test extremely difficult or
: impossible. VE's are required to make accomodations for people with physical

: or other conditions. In some cases, a sending test can be substituted for a
: receiving test. Sometimes the letters can be sent one at a time at whatever
: rate the applicant can respond to. In extreme cases the test can be waived
: altogether if the condition is properly documented.
:
: The FCC's position has been that they want people with disabilities to at
: least make an attempt at learning the code. The 5 wpm level can often be
: achieved (albeit with difficulty) in many cases as you have demonstrated.
:
: I can remember having a CW contact at about 30 wpm with a fellow who was
: both deaf and blind. He copied the code by placing his fingers on the
: speaker cone and feeling the vibrations. Granted, that is a different
: condition than you describe, but remarkable just the same.
:
: However, I believe that most of those complaining the loudest about the code
: do not have such disabilities, but rather just don't wish to expend the
: necessary effort. And I have no doubt that some prospective hams even
: cajoled their doctors into writing bogus notes for them for the purpose of
: evading the code test.
:
: > What the 'code/nocode' debate is actually about is whether the bandplans
: > should continue to be slanted so much in favor of the CW operators,
: > whether the small & shrinking CW community should continue to monopolize
: > 48% of the bandwidth below 25MHz (excluding 30 meters, a special case.)
:
: That 48 percent number is very misleading. If you study the ARRL bandplans,
: you will see large portions of the "CW" bands designated for AMTOR, PACTOR,
: RTTY, beacons, etc. On the 20 meter band for example, the General Class CW
: operator is limited to about 35 kHz (14.025 to 14.060 MHz). On the 40 meter
: band, Canadian phone stations are operating as low as 7.040 MHz. And the
: ARRL has proposed some expansion of the U.S. phone bands.
:
: > Nobody is talking about outlawing CW, just about dropping the fiction
: > that it constituting about half of all hamming.
:
: I hear this agument all the time. "No one is going to stop you from
: operating CW as long as you want to." But remember, CW is a language. And if
: newcomers aren't required to learn it, most will probably choose not to.
: Then incrementally, the CW sub bands will be shrunk until they disappear.
: The No-code lobby would have more crediblility if they DID call for making
: CW illegal.
:
: > If your position is that the elimination of morse as a license requirement
: > will result in its virtual disappearance from the bands, I think that's MY

4966. Icom IC-2100H and sending DTMF

Newsgroup: rec.radio.amateur.equipment
Date: 2002-10-27 19:47:15 UTC
From: jhayes7@hotmail.com
Message-ID: <ddf642ea.0210271147.781d0883@posting.google.com>
Source record: 37877

I'd like to know if it's possible to send DTMF tones with the 2100 as one can with the W32A (just hold the PTT and push the appropriate buttons on the keypad).

The 2100 manual leads me to believe that I can only transmit a DTMF string from a memory; is this true?

Thanks for any information.

No.. Press the DTMF button on the mic, and press the buttons.. Keying the mic is not necessary.

From: denton <denton@oregontrail.net>
Message-ID: <aphn4iqht1@news.apaynet.com>
Source record: 37883

Hi all...
Anyone using a Ten Tec Pegasus haveing rf problems when using ladderline to feed a multi-band antenna?
I have a lead on a used Peggy...the antenna system here is an 80 mtr delta loop used on 80 thru 10 meters fed with 450 ohm ladder line to a Johnson Matchbox in the shack.
My current rigs, an Icom 718 and a Corsair II show no rf problems.
Thanks in advance de Denton WB7TDG

Hi, I literally live in a junkyard. An old illiterate guy lived here
until he passed away a couple of years ago. He was a junk dealer and had
things piled in "thematic" piles. In the pile that seemed to be for old
radio equipment I found some of these odd objects. I enjoy listening to
shortwave, but I don't know much about electronics yet. I don't have
much money and am trying very hard to make a living on eBay. I was
hoping that some of you knowledgeable folks could ID some of these parts
I've found, and let me know if they are worth anything. Pictures of the
parts are at:
http://www.hackse.com/ebay/radioparts/unkrad.html
Thank you for your time.

HI:

I am requesting (any) Ham or Tech that has sucessufully
made the Modifications to move a 42-50 Mhz P200 / MT1000
to 54 mhz.

I am very serius about making these Mods, and wish for anyone
who has made them to perhaps share with me the value and location
of what parts were change.

Here is some photos of the Laser Trim Caps I suspect need to be
change.

Source record: 37890
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.cb

Hi All;

I'm in the process of restoration and 10M-conversion of three tube-type AM CB radios:
The first is a Pierce-Simpson "Guardian-23,", and the second unit is a "Cardon Spitfire", (which is identical to the Robyn T-123, and very similar to the Kris 23). The last is an oddball - a Canadian made "Chisholm GRS-1566"

I'm missing schematics and other technical info for these radios. There is suitable info in Sams CB series CB-35 (Robyn T-123) and in CB-8 for the Guardian 23. Would anyone have either of these Sams books, or any schematics/service info for these rigs? I'll gladly pay for copies of the technical info.

Thanks, and vy 73,

Ed, VA3ES

4989. Anyone make a TNC cable for their Yaesu HT?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-10-28 13:41:19 UTC
From: cprstn54zz@att.net
Message-ID: <3dbd3d4d.196351328@news-server.optonline.net>
Source record: 37800

The one I made won't key PTT and it is all heat-shrink sealed up, so I have to ruin it to start experimenting.

The manual says use a 2 kOhm resistor on the MIC/PTT lead. I had a 2.2 kOhm, so I used that.

I tested all leads of my cable at the TNC end and they all test out OK. When I checked two speaker-mics I had, they showed 700 Ohms and 1.1 kOhms for the MIIC/PTT lead with PTT closed. Maybe the manual meant 1 kOhm? Anone else make one that works?

I have have a icom 821H dual band satellite all mode rig forsale or trade.
Its 2 meter and 440 all mode with the tone board installed.
Comes with original box manual mic power cord.
The light on the right side of radio is out.
The lights for the meter and left side work fine.
This radio has 1 so 239 and one N for ufh.
$750 + shipping u.s only
Would like to trade for.
icom 706 with cr 502 crystal installed.
or 706 mark 2 or mark 2-G
Plus $ how much will depend on witch radio is offered and what comes with
it.
Please e-mail for picture.
I also have a comet duplexer forsale the radio will have to go before i sell
the duplexer since i need it for the radio $40 + shipping. u.s only

4991. Need help with Galaxy V xcvr

See your neighborhood Radio Shack. Any small soldering iron or gun, 60 watts or less, with a sharp pencil tip, will work for this and other general soldering chores. Plus a nice hunk of 60/40 lead/tin with a rosin core.

I've got some Galaxy gear here. The 'Mark' models will say so on the front panel so yours is apparently an original Galaxy V. Tubes in the VFO, right?
I have a manual copy here for the 5, VFO and PS but its 40-odd pages and I have no way to make free copies. I could mail it and you copy and return it or whatever.
Plus I've got two junker rigs (if you need any parts) and three good power supplies and a station console..any of which wouldn't mind a new home.
If your VFO is 'virgin' and hasn't had any mods I need some information from it.
Tnx,
Bill WX4A

In principle, a product of this sort _could_ work quite nicely. I have no information as to whether this particular product works as advertised.

> Why would I want one of these?

Microphones differ in their voice characteristics (frequency response), pickup pattern (e.g. omni vs. cardioid), output signal levels, impedance, requirement for a power supply, and so forth. They also differ physically (handheld vs. stand-supported of various sorts, etc.) and in the sorts of plugs and jacks that they supply or require.

Let's say, for instance, that you happen to have a desktop microphone which has a low-impedance (150 ohm) output, and which has characteristics that you find useful (e.g. a frequency response which emphasizes your voice in a way which helps you cut through pileups). Let's also say that you buy a new rig, which requires the use of higher-impedance microphones (e.g. 600 ohms) and whose factory-supplied microphone is not to your liking.

You can either live with the factory-supplied mike, or buy a new one which is compatible with your rig, or figure out some way to adapt your existing desk microphone to the new rig. The latter is what a product of this sort would do.

For a person with only one rig, it might be easier and cheaper to just buy a new microphone. The more different rigs that you use, and the more microphone types you buy or collect, the more useful a flexible adapter would become. People who collect vintage microphones might find a device of this sort to be a big trouble-saver.

If I were building something like this, I'd probably build it with its own independent microphone preamp stage (with switch-selectable loading and gain, and a balanced input circuit to provide good common-mode hum rejection), a buffered output circuit to sent a suitable-level signal to the rig (again, with selectable gain), and some sort of modular connector capability for both the mike and the rig(s). Multiple inputs and outputs would be a plus, as would a "smart" switching feature which would automatically activate a microphone input whenever the mike's PTT switch was closed.

On the topic of vintage microphones... at www.surplusshed.com you can buy an ElectroVoice dynamic microphone, originally made for the Army

as model M-43/U, for all of $15. The ad says it's an omni, but
references I've found elsewhere on the Net suggest that it's a
cardioid... I think it was used for broadcast applications. XLR
female connector and a standard mike-stand bushing. Unused surplus;
the one I got was still in the original sealed packaging. It's a
low-Z mike (150 ohms); I need to cobble up a way to hook it to my
Kenwood TS-2000.

<snip>

Funny you should say this... The ad indicates it does have all these
features plus it switches cw keyer and speaker audio from radios. Maybe I
should try it.

5003. FT100D AM transmit distortion

Newsgroup: rec.radio.amateur.equipment
Date: 2002-10-29 00:18:09 UTC
From: jburke1296@aol.com
Message-ID: <20021028191809.07628.00001072@mb-mn.aol.com>
Source record: 37814

I have an FT100D that works fine in all modes but AM. Reports on all bands report muffled distortion. I am using the stock mike & I have reduced the modulation down to 25% and I am not using the processor. I seem to recall in the FT100 writeup in QST that they encountered the same problem. My question is has anyone reccomended a fix for this problem or is this a gotcha from Yaesu.

Source record: 37825

Unless you live in an unuaual area all normal FM on vhf and above (not counting some microwave stuff) is narrow band width (5 Khz).

The simplex frequencies will depend on the area you are in. You can usually count on 146.52 and go up in increments of 15 khz from there (.535, .550) . You may also find some in use around 147.585.

The FT-100D just sounds terrible on AM. The best solution is to get
the AM filter for the 100D. It supposedly clears up the distortion.

YOu will get beter resuslts than with the antenna that comes on the HT. You will still hear some stations that you can not contact. Lots are using 50 to 100 watts.

The 5 watts should nto cause too many problems. You probably will get into a couple of catv stations areound chanel 18 . If so it is not your problem but the catv peoples problem for not having enough sheilding on their cable.

YOu do have to call for prices in many cases. Besure to include shipping and handling. Hamfests can be a good place to buy.

Shut up Andy...you can't even solder a mic connector.

Now to comment on the poster.....the 100 has distorted audio in all modes.
Including SSB. This is based on what I have heard on the air.

When using a ssb sorta radio to transmit AM you are running in the linear
mode. Thus the settings are critical. I realise you are being told to set
it for about 25 watts output in AM mode. Try reducing this. I have found
that 15 is more likely the best spot.

Also if that rig has the ability to shift its carrier insert frequency try
moving it around a bit. Without good test gear you will need to rely on on
the air reports. Which may or may not be a good thing.

Hope that helps some.

Dan/W4NTI

The simplex frequencies have some national standards, but will vary
with your area. Often repeater guides will also indicate common
simplex for certain areas as well. A local radio club would also be
helpful.

146.520 is the National Simplex frequency.

For some areas, the hams who work with emergency communications have
set up a different simplex one for their area.

There's a lot of people and repeaters on 2M. Narrow 5 kHz spacing
helps.

Happy trails,

What works for me is if I can hear a repeater full squash,
then I can probably work it with an HT on an external
antenna. Working another station simplex is a different
story. That mostly depends on where the other guy is and
what he's using. It will be a LOT more consistant than a
rubber duck. I don't like working stations in a car on a
duck. It can get irritating for both parties.

>Suppose I use that 5 watt radio inside my condominium.

The only thing I've found is more things interfere with
my radio, than the reverse, especially on 2 meters. PC's
are probably the worst offenders.

>Handheld radios don't seem to have squelch knobs.
>Is the squelch level set through a menu instead?
>Perhaps squelch doesn't matter much when using CTCSS codes?

They all have a squelch somehow. Some are knobs, some are
menu settable. It depends on the radio.

>Finally, what is the best way to shop for a radio?
>Most web sites say "call for price". Do I have to
>call/email every supplier to get the best deal?

Try the pricing at http://www.universal-radio.com/
Pretty good pricing, good selection. If you DO email or
call others about pricing, ask if they will beat the price
you find there. At least it will give you a starting point.

eBay always has a wide variety that changes daily. It's
fun just cruising and seeing what others have to offer
and what the going prices are.

Hello everyone, my wife and I are looking to trade our JVC Mini Digital Video recorder for either HF gear, or VHV/UHF gear. Unit is about 2 years old, well over a grand invested, LOTs of accessories. Can email pics and full details upon request. It's in excellent condition. Let us know what you have to offer. We have tons of references. Thanks for your time.

From the FT-100 FAQ (http://www.k0lee.com/ft100faq.html#am):

AM Settings

Gary Mitchelson, N3JPU, has done some interesting tests with the AM
settings and found some settings that work much better than the
defaults. The parameters that sound the best are: PO set to 25, Mic
gain to 40 to 50 and Carrier Level set to 225 (F51 menu). You can hear
a sample of his testing at: http://mywebpages.comcast.net/n3jpu/

Most owners who have had difficulties with AM audio quality have
reported that the 6k HZ option AM filter (p/n XF117A) is an absolute
necessity for both transmitting and receiving in AM mode.

I hope this helps.

If you're doing AM through your stock SSB filter, that's why it sounds muffled. You need the xf-117a 6-KHz AM filter. The wider filter will also give you much better fidelity on received AM signals.

The reason SSB is so popular nowadays, is it takes up less bandwidth than AM. If you're going to do AM, you need the wider filter to sound good :-)

Hi, Jeffrey...

A lot will depend on where you live. I tried a handheld and outside antenna in Ft. Worth, TX... a "hotbed of RF interference". What I found was it did a decent, not "good," job of letting locals on the repeater hear me. I lived about 20 miles out of town. However, the HT's receiver sensitivity is raised to let it hear well on a short "rubber duck" antenna. With a mag mount on the roof, I was hearing intermod, paging services, commercial radio and all sorts of "bleed-over" **when I was anywhere near the downtown area** that could wipe out even a strong signal from a repeater. If your environment is less RF-rich, it may work great. Ask some of your locals... surely some of them have tried it.

Honestly, what I found, after a couple of months, was that there were enough limitations for me to using an HT mobile, that it was time to buy a real mobile radio... even an older, used one. It WAS worth it.

Later model HTs tend to have menu-adjusted squelch that, believe it or not, works very well on the ones I've tried. I rarely have to manually adjust my TH-F6A.

You can shop around on the internet and you probably won't find $10 difference in prices between the larger dealers. Look for things like prepaid freight... some might have it and some not. Also you might find a special or two, but it's probably not worth spending the money to call a bunch of 'em.

Good luck & 73... Ed, W5EJ

Hmm, I see no reason this would be "dirty". The unit used a crystal controlled oscillator and a high q bandbass filter for it's output stage. As far as for quality of signal if it were used for communications, that would depend on the circuits used to key it in CW, or generate the SSB signal.

I suspect that the buyer would strip out the oscillator circuits and configure this as a straight linear amplifier, driven by his transceiver. As such, it would make a fine clean amplifier. Add some LC circuits and a heavy duty bandswitch, and you have a typical amateur radio linear.

Health hazard??? You must be joking. My Collins 30 S 1 is in the same grade and I dont for a minute fear the RF from that.

Now if I were to get my carcass across the HV Plate power supply.....
that would be a health hazard :-)

Using a mag mount with an HT will work -- many do this successfully. But be aware the HT was designed to work with a rubber duck and you may experience intermod when you use a better antenna and get close to powerful repeaters or even pagers. Mobile radios are far less susceptible to this.

As for hearing stations you can't work --- could be as you are limited to about 5 or 6 watts. And some repeaters are known as alligators -- big mouth, small ears. But usually if you are in a reasonable range of a repeater -- you will probably work them OK.
For repeater range estimation -- See URL
http://www.artscipub.com/simpleton/simp.range.html

For operating an HT inside the home -- I do it all the time with no interference -- your mileage may vary -- if so K-com filters will help with telephones and proper TV filters will help there.
For help with RFI -- see URL:
http://ac6v.com/techref.htm#RFI

Many new rigs have squelch adjustments by menu -- check the manual.

As for best price -- it as you say -- check QST, web sites and shop til you drop.

And finally -- take a look at eham reviews where folks rate their radios -- URL:
http://www.eham.net/reviews/

How are you obtaining the voltage to power the scanner?

If its via the 'cigarette plug' then that is likely the problem.

You are picking up alternator and various other things generated in the car electrical system. Perhaps a wire straight to the battery or you could try a tap off the fuse going to the radio in the car. It may have a bit more shielding/filtering.

If not...go to radio shack and buy a brute force in line filter for 12v system in the car.

Folks
Just acquired a Frog-7 - badged 'Sommerkamp'.
Help! The tone quality of the audio is horrible!!
It sounds like everything is underwater!

The tone is responding to the tone switch and is marginally improved by
using an external speaker (but not much). Volume control is working OK and
there's no audible distortion - just a very narrow audio range.

Can anything be done? All help appreciated

Thanks

Adrian

>If I put a magnet mount 2 meter antenna on the
>roof of my car, and connect it to a 5 watt handheld
>radio, will I get good results?

This should be adequate for working most local repeaters. You'll almost certainly get better range out of the HT than you would with its own rubber-duck antenna.

> Or, will I hear
>a lot of distant stations that my radio won't be
>able to reach?

This might be the case for distant, high-power stations or repeaters, but that'll always be the case. Your range is probably going to depend a lot more on having a reasonably clear line-of-sight to the distant station, than it is to small differences in your power level or antenna type.

>Suppose I use that 5 watt radio inside my condominium.
>Is it likely to cause any interference? If so, what
>devices would be most affected: cordless phones,
>FM radio, or cable TV?

I think you're unlikely to cause significant interference under those conditions, with any of the devices you've mentioned.

I haven't experienced any interference from my 2-meter radios (up to 100 watts FM from a roof antenna when I was experimenting with trying to hit a distant repeater). At 440, I was able to make my solar-powered motion-detector light in the driveway switch on, when I keyed up from my vehicle-mobile rig at 25 watts at a distance of about 10'.

>Handheld radios don't seem to have squelch knobs.
>Is the squelch level set through a menu instead?

Usually, yes.

>Perhaps squelch doesn't matter much when using CTCSS codes?

Squelch matters!

A lot of repeaters don't put tone on their output, so you can't always depend on this. Using tone on simplex is tricky at best (I think it's practical only if you're working with a specific set of people such as an ARES group, at a specific event).

Fortunately, in "portable" operation, you can usually set your squelch level once for a given repeater and not have to change it unless your position changes greatly (e.g. you go into a building which has a lot of computers or other RF-noisy devices operating).

The lack of a separate squelch knob is one of the things which makes an HT less than wonderful for vehicle-mobile operation. Vulnerability to intermod interference is another. As you drive around almost any metro area, you're likely to find an HT being de-squelched repeatedly by intermod interference from paging transmitters, high-power amateur or other transmitters on nearby frequencies, etc. Having to try to fiddle with an HT's menu structure to adjust the squelch is *not* something you want to do while driving!

Mobile rigs tend to have better front-end RF filtering against intermod, and separate squelch knobs... intermod is less of a problem, and you can adjust the squelch without having to take your eyes off of the road.

>Finally, what is the best way to shop for a radio?
>Most web sites say "call for price". Do I have to
>call/email every supplier to get the best deal?

Very probably, yes.

Remember, also, that aftermarket support can count for a lot, and that you're somewhat more likely to get decent support from a vendor who does not regularly offer the rockbottom prices on most equipment. A dealer who offers the best discount prices may not be willing to help out with problems, "DOA" or defective-when-purchased products, etc. and will simply refer you to the manufacturer's repair facility (Google around to read some of the horror stories about slow or bad repair support!). The bigger, established dealers (e.g. AES and HRO among others) may charge slightly higher prices, but they're more likely to be willing to help out with over-the-counter exchanges, returns, and so forth.

I've found, over the years, that "buying cheap can be very expensive".

153.980
157.450
155.340
155.055
39.500
162.400
159.210
453.250

Now if I want to get these frequencies through the use of Regency crystals, I would need (if I am doing my math correctly)...

155.315
153.880
157.350
154.955
39.400
162.300
159.110
453.150

Does that sound correct? If so, might anyone have any of those in Regency crystals they would want to get rid of?

Sincerely,
BTJustice

Forgot something. For 155.340 I would need a 155.240 Regency crystal.

Sorry,
BTJustice

To All

I am looking for a TU-79 tone board for a friend, so I don't have the bottom line for price. The tone board is for a KW 7930/7950 series 2 M radios. The tone board may have had other applications that I am not aware of. Anyone have one of these and what's the asking price?

**Hi George,
I have a Kenwood TS 7950 and a tone board. Simple plug in but it
only gives you a choice of 3 tones. You have to cut the diodes
according to the operating manual and pick the tones you want.
Believe it or not, I have not used the unit since the repeaters I
normally stay on do not have PL.

I notice that one of the three PLs has two diodes cut so it must be
already set for a specific tone. I would have to check the book to
find out but they can be resoldered. Since I am not using it, make
an offer. I have no idea what they are worth. Small unit, measures
about 2 1/2" long X 1" X maybe 1/8" thick and plugs into the 7950.
Has two screw holes that I believe are already in place inside the
transceiver. PS: Don't believe it has any other applications.

***Addendum to my previous message. Your friend will need the
operating manual for the 7930/7950 to determine which diodes to cut
to setup the selected tones. I can reproduce a copy if he does not
have one.

I used to do that... when it would work. Sometimes using UHF crystals
in VHF slots (or vice versa) will come out to a "real" frequency.
Sobtract the 10.7 or 10.8 (or 10.85) , then multiply x 3; then add back
the 10.7 or whatever.

F'r instance railroad freq 160.65 - 10.7 = 149.95; x3 = 449.85; + 10.7
= 460.55

harry

You can play with that for hours... or make a little app to do it for
you in Excel or something

I had to do that for the first six months of operation in my own case. It surprisingly increased my range.... was able to hit repeaters 30+ miles or more away and it definitely increased my simplex operating range.

>
> Suppose I use that 5 watt radio inside my condominium.
> Is it likely to cause any interference? If so, what

I have seen a little on FM and on non-cabled TV from time to time, but this was on old TV's and radios. Not saying you will have that same problem though....

>
> Handheld radios don't seem to have squelch knobs.
> Is the squelch level set through a menu instead?
> Perhaps squelch doesn't matter much when using CTCSS codes?

Some do have a squelch setting and some don't. Some have a button that you can push to hear unsquelched audio for as long as you can push the button. CTCSS tones are nice especially when ya have a repeater that seems to have other repeaters around the state that get's into it from time to time. Our repeater here in Midland, MI 147.000 has competition with the Kalamazoo, and I believe Detroit area repeaters on the same frequency..... running the PL tones on input and output helps some.

>
> Finally, what is the best way to shop for a radio?
> Most web sites say "call for price". Do I have to
> call/email every supplier to get the best deal?

First decide on the model you wish to purchase. This can be a challenge, but decide on the features that seems to fit your needs the most after you have decided on types of usage you think you may have for it.

Yes, you might have to call some of the retailers but some retailers have enough integrity to stick to a price for at least a certain period of the publishing of the ad.... or on a website.

Good Luck,

Hi all.

I finally got my new mobile rig, the Yaesu FT-8900.

Its a great radio though, but wide RX around 10m and 6m would be nice to have.

I did some research with the solder pads next to the processor, but I was unsuccessfull revealing new features or band limits. The modification archive www.mods.dk have the MARS/CAP modification available, which extends the TX on 2m/70cm and opens the 29.700-30.000MHz gap, but nothing else.

Weird thing was, that the radio would not even boot with some jumper configuration.

I have a US-model of the radio, and also would like to modify it to EU-version to keep the TX range in the european bandsplits. UHF for example is now 10MHz too wide, as there is no ham traffic here on 440-450, its allocated for LMR/PMR.

If anyone had better results with the modifications, or know some key combinations to active features, I would like to hear from You. Also if someone has already a european model, I would like to know the jumper settings of Your radio.

Hello:

For anyone out there using a JRC NRD 545 with a PC control program:

Was wondering if you've run into the need to initially preload, or
"pre-condition" the memories in the radio
with any frequency first, before you can download new frequencies from a PC
conctrol program file
to the radio ? (with the new frequencie(s) replacing the one(s) preloaded)

If so, any idea why this is required ?

Thanks,
Bob

See how much trouble you could have saved if you mentioned that?

Are you using the antenna directly on the scanner? If so follow previous posters advice.

The problem is radiated interference from the cars electrical system. You will still need to filter it if you want it gone.

I have old QST Magazines from early 70's, 60's, and possiblely earlier.

Also have a few Amatuer Radio Handbooks (1968, etc)

The Radio Amateurs Journal from early 70's, 60's, and possiblely earlier.

Have a Antenna Relay Unit BC-442 AM manu by Colonial Radio Corp for the Army
(Not sure of working cond.)

IC Active Filter-QF1 - Manu Autek Research (Not sure of working cond.)

Philmore Junior Microphone in Box (Not sure of working cond.)

Also have a bunch of vacuum tubes and electron tubes, pretty sure they do
not work (look blown)

Location: North of Boston, MA

Email me,

Can email pictures if you want to see the stuff

5064. Help with Wavetek 3001 Signal Generator

Newsgroup: rec.radio.amateur.equipment
Date: 2002-10-30 18:54:04 UTC
From: David Black <dblack4@earthlink.net>

Source record: 37775
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

Hi,

I'm in need of assistance in repairing the power supply in my Wavetek 3001 Signal Generator. What I'm looking for is the schematic for the power supply. I have a maintenance/repair manual but the ps schematic does not match the ps in the unit.

My generators ps uses discrete components for voltage regulation and only has 1 voltage adjustment pot. The schematic shows voltage regulators(LM395 & LM317) and 2 adjustment pots.

If you should have the schematic I'm looking for I would appreciate a copy. Thanks

david

> Sincerely,
> BTJustice

Remove your 10.8 MHz IF crystal, find an old Regency or Radio Shack
scanner, remove the 10.7 IF crystal and install it in your Bearcat.
Then use the Regency Crystals marked with the proper frequency. Yes,
it will work, have done it many times.

Some suggestions.

Try two or three snap-on rf chokes on the alternator leads
>
Use a grounding strap between the hood and the body - Is
surprising how this often helps especiallly if two straps are
used - one on each corner near the hinge.

Sometimes it is the electric fuel pump that makes the noise. You
can check this by having the scanner on and turning the car to
on, but not starting it. The fuel pump will usually run for two
or three seconds to built up pressure. IT you hear the noise
during this time then you probally have fuel pump noise. RF
chokes can be used here as well.

Also sometimes the fuel injectors cause noise - check grounds
and make sure engine is well grounded to body and body to frame.
Shielding braid from an old piece of coax cable works well for
this.

If you use an outside antenna, make sure that your are not
routing the antenna wire along side of other wires from the
wiring harness. They often carry digital noise that can bleed
into your antenna.

You didn't say what kind of car or what type of ignitition
system. Each has its own quirks. Check to see if you have good
quality ignition wires and proper type of resistor plugs.

Another trick that sometimes works is to remove the antenna from
the scanner if its a handheld, replace it with a resistor and
"sniff" around the engine compartment with it to try and localize
the noise. Holding it near the noise source will help identify
the source. If your scanner is not a handheld, use a piece of
coax with a resistor shorted across the end as the "sniffer"

Hope this helps - sometimes the noise comes from multiple sources. Wiper motors, fans, pumps, dashboard displays, computers, even fan belts have been known to cause noise. Let us know what worked for you.

I have been DESPERATELY looking for 10.8 IF crystals for my Bearcat III scanner. I need the following listening frequencies...

155.415
153.980
157.450
155.340
155.055
39.500
162.400
159.210
453.250

I suppose 10.7 IF crystals would work in it if I used...

155.315
153.880
157.350
155.240
154.955
39.600
162.300
159.110
453.150

I would either like to trade 1 for 1 with crystals I have now that I cannot use in my area or buy cheaply.

Sincerely,
BTJustice

Hi,

The manual I have for the 3001 has a 723, and a 1458, and one adjustment pot.

It is identified as: DPS 2/DPS2-1 Revision H.

Better?

73,

Chuck, WA3UQV

Source record: 37781

It's going to be from either the ignition wires, the electrical fuel pump or the alternator.
Simple to isolate the fuel pump by pulling the fuse for it and turning the car on.You can isolate the alternator by unplugging the leads for it as well.
I had a noisy fuel pump on a Ford Explorer once and found a Technical Service Bulletin about RF noise created by the fuel pump and had the dealer drop the fuel tank and put in a
new fuel pump per the TSB. See if there already is a TSB for your vehicle by searching the NHTS website
at www.nhtsa.dot.gov

Good luck,
Steve

5072. FS: Frequency Synthesizer for Drake R-4 Series

Newsgroup: rec.radio.amateur.equipment
Date: 2002-10-31 00:32:51 UTC
From: Bob Stein <w6nbi@earthlink.net>
Message-ID: <3DC07A29.1030505@earthlink.net>
Source record: 37784

This frequency synthesizer for the Drake R-4 series receivers was designed and built by me and was published in the August 1972 issue of "ham radio" magazine. The synthesizer provides complete coverage from 500 kHz to 30 MHz. When the Drake receiver is used as the controlling VFO in transceive mode, full operation is possible from 1.5 to 30 MHz, including the WARC bands. I will supply an original issue of the magazine (torn cover), as well as schematics of all the circuits which improved performance but were never published.

Best offer over $275. Buyer pays shipping.

Bob, W6NBI

Drake R-4 Receiver, T-4X Transmitter, MS-4 Speaker and AC-4 Power Supply, all with original manuals. The T-4X has full power output; the finals have had less than 25 hours of use. The R-4 is in perfect operating condition. It comes with several extra crystals, which are not needed if used with the Drake frequency synthesizer. I have at least one of the original shipping boxes.

Best offer over $325. Buyer pays shipping.

It's usually not even necessary to do that on the newer vehicles. When the ignition is turned on without starting the car, the fuel pump runs for 2-3 seconds and then stops.

Looking for junker Hammarlund transmitters and receivers from the 1960-1970 era, the more modern looking gear. Models might include the HQ-180, HQ-170, HQ-100, HQ-110, and HQ-145 series. Also HX and HL series transmitters.

By JUNKER I mean radios usually needing repair and/or servicing or may be, otherwise, in non-working condition and have appropriately LOW prices!

Please email with descriptions and/or pictures.

Cheers,

AL

I have for sale a Motorola Syntor X UHF Mobile 100 watt 16 channel
radio. The model is T74VBJ7D04AK. It comes with all the normal accys.
I believe its range is 450-470 but I am using one in the 440 ham band.
Please email me with any questions. The price is $150 plus shipping.
Thanks, Mike

I just purchased a used HP141T with plug-ins. Although it didn't have manuals, I was able to obtain some military technical manuals, but these seem more suited to maintenance than actual use. There is an operational section, but unclear, at least to me. I'd just like to get stated using the analyzer. Are there any places on the web with tutorials?

Thanks, in advance.

Have the following items for sale or trade:

Kenwood TS-680S HF + 6 Meter Rig - All modes, all bands, full coverage
$475.00

MFJ 1278T (Turbo w/2400 Baud modem) VHF, HF all mode, Packet, Amtor, Rtty,
Cw, Fax and more w/cables no power supply (uses 12v DC).
$75.00

Icom HM-14 Touch tone hand mike w/no connector (works on any rig w/8v
supply, Kenwood, Icom, Yaesu ect.)
$50.00

Kenwood SP-120 matching speaker for 120/130/140/430/440/450/680 etc rigs
$50.00

Radio Shack HXT-202 2 meter handheld w/no so great Icom BP-8 battery (radio
used very little, excellent cond)
$80.00

BC-350 Icom quick desktop charger for BP and Super BP series batteries
$40.00

IC-U12 Commercial UHF handheld in non-working cond. had touch tone pad etc.
(no idea what it does & don't want to waste time finding out)
$15.00

Diamond HomeFree 802.11 wireless cards - One PCMCIA and Two ISA cards,
perfect cond. upgraded to Cisco aironet and don't need these.
$25.00 for ALL three cards!

IBM type 4707 (10"??) VGA monochrome monitor in excellent cond. Great for
tight spaces and communications use (cw, rtty, packet etc.) VGA modes upto
640x480
$50.00

RF Concepts VHF Amplifier model 2-315, rated at 20 in, 150 out and 40 in
170+ watts out, great amp. GasFet preamplifier in excellent cond., used very
little and bought new.
$250.00

Considering trades on some items for the following:

Icom IC-706 MK II G
Alinco DX70TH
or something on that line...

Also looking for a 10 meter mobile like a Magnum 257, RS HTX-10, or one of those clones like those rigs

Shipping for 78258 extra...

5102. Recommendations for "All in One" unit?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-10-31 19:24:13 UTC
From: axinar@one.net
Message-ID: <c45d35a2.0210311124.60de0ab9@posting.google.com>
Source record: 37713

Okay, having unloaded basically ALL of my accumulated stash of radio gear on eBay -- my Yaesu FT-51R and VX-5R, my Sony 2010, even my Yaesu FT-411, plus my old 12V belt-pack lead-acid pack, I've been hunting around to see if I can find something better to cover everything in as few units as possible.

This is proving easier said than done.

Had my eye on the Kenwood TH-F6A, but the reviews are saying that it is even worse on shortwave reception than the VX-5R, and that was nothing to write home about.

Yaesu VX-7R looks like a decent contender of course, particularly with the inclusion of the low power 220 transmit ability, but reviews seem to say that waterproofing the mic and speaker has lead to less-than-ideal audio peformance ... plus there are reports of all sorts of other chaos with this radio.

Kenwood TH-D7A(G) looks kind of interesting ... built in TNC. Is it correct that you just have to hook up this radio to your serial port and you're ready to go? Haven't been on packet in a long, long time. Don't suspect too many are still on the air though. However, there seem to be some "ruggedness" issues in the reviews.

I even looked at something called an Alinco DJ-X2000T just for the scanning side ... have been able to find very little in terms of reviews on this one though.

I've even been looking at the Yaesu FT-817 and FT-897 ... of course I live in an apartment so I'd have to get creative with the antenna situation if I went this route and wanted to do much on RF.

For the power situation I've been looking at one of the units from Store4power.com wich the built-in inverter.

So, basically, I'm just going to open this up to suggestions --

Here's what I'm trying to do ...

Would like a decent HF reciever capable of sideband.

Would like a decent HT capable of at least transmit on 2m and 440.

POSSIBLY would like a portable HF transciever that can operate on a portable battery and a portable antenna setup that can be done in an apartment setting.

Any suggestions appreciated.

Thanks!

Ax

It sounds like you want to talk on the repeaters, listen on hf, and possibly do some hf qrp. I'd just look at an Icom 706 or Yaesu ft-100 (they're both going for about $799 nowadays). You can always crank them down to qrp levels for apartment or battery operation. Listen everywhere. Talk on the repeaters. And possibly augment that with a second box, a dual-band ht, if ya just gotta have a carry-around. The 706/ft-100 would also give you enough power for mobile hf operation -- just add ham sticks and go...

Message-ID: <hanw9.2226$S44.670@news4.srv.hcvlny.cv.net>
Source record: 37725

I have the following items for sale:

1- MFJ 949-e Versa Tuner II - Slight scratches on top, otherwise in excellent condition. Asking $75.00, I ship.

2- Ameco PT-2 preamp. Excellent condition. Asking $50.00, I ship.

3- Yaesu FT-470 HT. Very good physical condition, however there is a problem in that the squelch does not always open on received PL. Also included is a Yaesu NC-29 battery charger and W&W 7.2 volt 1200 mAh battery which seems to hold a charge forever. The charger works great but is missing one of the push button rubber covers. The charger has had the trickle charge mod and, other than the missing push button cover is in great shape. This radio would be excellent for packet. Asking $100, I ship.

Pictures of all and additional information is available upon request.

Thank you....

I am in search of long telescopic whip antenna elements for a portable loaded HF dipole I am making. The largest I have found thus far are 72"

extended, and I need 96-108", about .25" diameter, not more than .50" fattest section, with a threaded or punched base for mounting. I have tried Rat Shack and the usual catalog suppliers (Mouser, Fair Radio, Ocean State, AES) without success. Does anyone know of a mail-order source for such parts?

Any crystal house can make you one for a reasonable price if you tell them the frequency, the loading capacitance, the package and whether you need series or parallel resonance.

International Crystal Manufacturing and JAN Crystals are probably the biggest outfits. Cuemeks Electronics at 888-678-9825 are cheap and can do some odd stuff for less.

5124. Re: Using Regency 10.7 IF Scanner Crystals Instead Of Bearcat 10.8 IF Crystals

Newsgroup: rec.radio.amateur.equipment
Date: 2002-11-01 19:58:13 UTC
From: fmmck@aol.com
Message-ID: <20021101145813.13044.00001296@mb-mb.aol.com>
Source record: 37735

<< Remove your 10.8 MHz IF crystal, find an old Regency or Radio Shack scanner, remove the 10.7 IF crystal and install it in your Bearcat. Then use the Regency Crystals marked with the proper frequency. >>

Jim-

Are you refering to a crystal that converts 10.8 to 455 KHz? I think that should work. The original crystal for 10.8, would be 10.800 +/- 0.455 = 11.255 or 10.345. The new crystal for 10.7 would be 10.700 +/- 0.455 = 11.155 or 10.245.

I'm not sure, but I think Buford's original formula would result in an error, depending on whether he was using high-side injection or low-side injection in the first conversion. For high-side injection, the Regency crystal would need to be marked 100 KHz higher than the desired channel, or 100 KHz lower for low-side injection. The trouble is that you don't always know which is in use unless the crystal frequency is marked in addition to the channel frequency.

Keith...

For what you describe, you would be hard pressed to beat the FT-817!! I owned one and only got rid of it because I bought/built an Elecraft K2 which I like much better. I have not worked with the 897 but would expect it to be equally good. One thing I can tell you with **absolute certainty** is you will NOT find a scanner or HT that is worth a flip on HF. PERIOD!! Yes, some will receive signals on HF, but probably not 2% of what's there. The Yaesus are REAL HF radios in addition to their other capabilities. I have talked to Russia, Europe, Japan... all over the world on an 817. The ONLY thing that will limit you with a radio like that is the antenna. You still need a good, full-size, tuned-to-frequency antenna for best results.

I use an FT-100D in my car. GREAT little radio with the very best noise blanker (optimized for ignition interference) on the market.

That all said... if you plan to OPERATE HF, get a "real" HF radio. As for the "all-in-ones" many people like them because they're less expensive than separate radios, conveniently small and compact, etc. Personally, I don't want to have to cease listening to my local friends on the 2m/70cm repeaters when I get on HF. And if ANY band or feature in an all-in-one goes out and necessitates a trip back to the factory... you're 100% off the air on all bands 'till it comes home. I don't like that, either. I would personally opt for a used HF plus a used U/VHF radio if space permits. But that's just me.

Hope it helps.. Ed, W5EJ

Message-ID: <3dc309d1.24743954@news1.c2i.net>
Source record: 37737

Hi,

I have several pcs in stock of the 6C4C valve from Svetlana. This is the same as 6B4G. The valves are very well built and looks identical to NOS Sylvania. They are made probably somewhere between 1960 and 1980 The price is about $ 41.- each. Picture and data at my web site www.demostenes.no

Regards,

Arnold
DEMOSTENES - N6899 Balestrand, Norway
Tlf. +47 5769 1340 Fax +47 5769 1267
http://www.demostenes.no

Thousands of different valves in stock as well as sockets,transformers,books,caps,resistors and other components. Web site is updated every week. You can order on-line.

5128. Re: Followup: Strange problem with TH-F6a

Seems the battery was the culprit. Battery did same thing in another TH-F6a.
New battery works well. Seems detection circuit is in battery, and was too
"critical"

It sounds as if the reference oscillator for your synthesizer has drifted off frequency. The frequency error should be higher on the higher frequency bands, if this is the case. I picked up an Icom R100 last year for a good price. The reason that the person sold it was because of the tuning error. It is a 10 minute job to set things back on, if you have the right equipment. A "quick and dirty" fix is to tune the unit to a known, steady signal, such as an NOAA weather station to set the reference oscillator. Once you get things close-in, you can then tune to something like a control channel on the 800MHz band for more refined tuning.

Pete KE9OA

I'm replacing some burned components in a Daiwa CN-801H HF SWR meter. One small disk capacitor, marked:

6C
KCK

eludes me as to its value and I don't have an RCL instrument to test its true value. Can any of you smart hobbyists out there help me out with this?

thanks, Rick N6CY

For Sale on Ebay Item # 1394896616
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1394896616

Kenwood TS-520 SSB/CW HF Transceiver in excellent condition. Serial # 521184

This is a great rig that served me well during my HF DXing days. Extremely sensitive receive, really clear. Pulls in weak signals well.

80/40/20/15/10M bands USB, LSB, and CW modes. About 100W output power on all bands.

All solid-state with tube finals. Finals can be powered down when not transmitting to save heater life. Built-in cooling fan.

Well-built and rugged radio, one of Kenwood's finest. Often used in mobile configs.

Can be powered by 120VAC, 240VAC, or 13.8VDC. Includes 120VAC power cord and Service Manual.

Has VOX, NB, AGC, RIT, Mic control, Carrier control, Standby, WWV receive, etc, etc.

A few minor scratches on cabinet, but face is in great condition, all lettering clear and bright.

Installed tubes are working great and comes with these spare new tubes:

2 x 6146A (final)
1 x 6146B (final)
1 x 12BY7A (driver)

Two finals and one driver are required.

Great output and receive recently verified but due to age and nature of this radio, sold "as is". Shipment will be packed with care.

5146. FS: PC 900 high gm triode - cheap

Newsgroup: rec.radio.amateur.equipment

Hello,

PC 900 is a B7G base triode with a heater of 3.9V 0.3A, Va is 135V
Vg -1V Ia=11mA Wa 2.2W Ik=20mA max, u=76 and the gm is 14.5mA/V
A very promising valve to experiment with in low-level stages, both
audio and HF/VHF amplification. It was developed for use in VHF and
UHF television tuners. The low heater voltage makes it very easy to
use in an ordinary 6.3V heater system, just use a dropper resistor of
8.2 ohm 2W and you are very close to 3.9V

I have 400 pcs in stock and I will sell them at only $ 5.00 each or
$ 2.50 each if you buy 100 pcs or more. The valves are NOS, in mint
condition, original boxes and the label is Haltron, but they are
rebranded, and probably made by Philips or Siemens.
Have a look at my website www.demostenes.no and e-mail me if
interested.

Best regards,

Arnold Goks&#65533;yr

DEMOSTENES - N6899 Balestrand, Norway

Due to impending long term travel plans I am having to sell some of my
radio and test equipment. I therefore have for sale my Trionyx TR-1000
frequency counter with its manual. The counter works perfectly and is
in excellent cosmetic condition. It has the following specifications:

range: 10Hz-600MHz
display: 7 large 0.4" LED digit display
gates: 1 sec and 0.1 sec
portable: internal NiCad battery pack
power input: 9-15V AC or DC adapter (wall wart) at 300Ma
dimensions: 13x14x7 cm
weight: 700 grams including NiCads
flexible rubber duck antenna for RF sniffing
BNC inputs
manual

I am asking US$49 for this counter and that includes surface shipping
to any address in North America. Please contact me by direct email if
you are interested.

Message-ID: <n4Zw9.62465$cG.872544@twister.kc.rr.com>
Source record: 37670

The newest version of the Rascal, the NEW mk V with SGC-2020 ADSP transceiver to Rascal mkV cable. The mk V can be interfaced with ANY transceiver by simply buying the correct cable allowing you to use it with any/all of your radios. I've had this unit for less than one week (have invoice) and decided I will not be using the digital modes, e.g., psk-31 etc. Nothing has been opened or undone, it's just as it came to me. My cost was $56.95 shipped. I'll ship it for $44.95 Conus. See at: www.packetradio.com/rascalmkv.htm

P.S. I would also be interested in trading for a Kenwood MC-43S hand mic in excellent condition.

Thanks,
Van K0KAV

From: Keith <kavan@neb.rr.com>
Message-ID: <7V_w9.136373$om2.2276716@twister.rdc-kc.rr.com>
Source record: 37683

The newest version of the Rascal, the NEW mk V with SGC-2020 ADSP
transceiver to Rascal mkV cable and Software. The mk V can be interfaced
with ANY transceiver by simply buying the correct cable allowing you to use
it
with any/all of your radios. I've had this unit for less than one week
(have invoice) and decided I will not be using the digital modes,
e.g., psk-31 etc. Nothing has been opened or undone, it's just as it
came to me. My cost was $56.95 shipped. I'll ship it for $44.95
Conus. See at: www.packetradio.com/rascalmkv.htm

Thanks,
Van K0KAV

Tike,

Even though yours was a loaded question, Rollo certainly did not answer it correctly.

The correct answer is: Yes, the general test contains all the necessary testing to operate within the same bands that an Extra does. Since this is all your asked, it's all I'll answer.

Regards,

Casey KF6OQ

Howdy,

Anyone have any luck with the mods for the IC-R10 which are available on the web?

I've never used surface mount resistors before and I'm afraid I won't have the expertise (or steadiness) to solder them to the board.

Comments? Suggestions?

tnx es 73 de Jack, K9CUN

5179. Looking for source of 2.4 Gig equipment

Newsgroup: rec.radio.amateur.equipment
Date: 2002-11-03 03:47:18 UTC
From: Roger Halstead <rdhalste@tm.net>
Message-ID: <a%0x9.2004$vZ6.1839620@newshog.newsread.com>
Source record: 37690

I'm looking for some 2.4 gig equipment to try both EME, ATV, and digital.

I've not worked on the 2.4 gig band before, so I know very little about it.
The ARRL handbook does little more than aknowledge it exists. With all the
shairing, it's difficult to find what frequencys I can use and what power.

So far the highest I've been has been the 23 CM band.

5187. FS>>PRO-2005 w/ laptop

Newsgroup: rec.radio.amateur.equipment
Date: 2002-11-03 13:40:40 UTC
From: John Schneider <thecop@optonline.net>
Message-ID: <aq393cjsa1@bob.news.rcn.net>
Source record: 37548

This sale was posted some time ago, but the deal fell through. I am posting to the N.G.'s prior to listing on Ebay.

I have for sale a Radio Shack PRO-2005 scanner with the computer control board (Opto Lite 456) installed. This radio also has the discriminator mod. done and an RCA jack has been installed on the rear panel for easy hook-up.

The radio, in my opinion, is a 8.5 out of 10. There are very few normal wear marks on the case and the display is very good considering the age of the radio.

The chrome coloring on the volume and squelch knobs appears a bit worn. The internal power supply has been removed to facilitate room for the Opto board. As a result, a Radio Shack wall wart is included. There is a bit of "play" in the external radio power supply jack, so that it must be moved so as not to make the radio cut out. Once moved, the radio stays powered. With the radio hooked up to the laptop, it becomes a "black-box" scanner and there is no display anyway. This is the only problem with this setup.

The laptop is a Sharp 486 (on boot-up a 586 chip is displayed, but the system info. indicates 486, so that's how I'll advertise the rig) with 500 meg.'s of memory and 16 meg.'s of RAM. It has a nice crisp color display and is running Windows 95. In addition Probe v. 6.0 is installed (Probe running this scanner makes the scanning speed nothing short of amazing, even by today's standards). The pc battery will not hold a charge, but the included power supply works great (batteries for this computer are still readily available from various vendors).

I do not have any of the original documentation with the exception of the Opto board installation instructions. Nor do I have any of the original boxes. The included telescopic whip works great, but again, is not original.

I apologize for such a long post, but I would much prefer the buyer NOT be surprised nor not know what he is purchasing.

The asking price of the radio and laptop is $350.00 + $20.00 shipping. I will accept personal checks or postal money orders. If you wish to pay via PayPal, I must charge an additional $10 to cover their fee.

Pictures are available upon request. Please e-mail direct if you have any questions or need any additional information.

Thanks for your time.

John Schneider

Check fuses. Probably have a power supply problem. Most of the supply componants are on the "AVC"?? board if I remember right. I have a 520 manual somewhere, but not handy at the moment..My manual is not for the "s" model though. You will need a service manual to work on it. You need to check the voltages on that board. "9v, 3.3?? volts, etc" You may have popped a transister on that board, or have another problem. MK

I have 5 Johnson 8640's 900mhz radio's "Ready to Go" on the 900mhz Ham band using the 25mhz Split.. These radios are 15w, 10ch, pl/dpl, and

are capable of scanning while on the hook.. These radios are NOT capable

of talking simplex, only to a repeater in the 902/927 range. The radios come programmed, but can be re-programmed with existing RSS..

Each radio comes with a Mic, mounting Bracket, power cord, tuned & programmed to your freq.'s..

Each radio is $50 plus shipping USPS or all 5 for $250 with free shipping..

Also available are :
3db mag. mount ant's $10
1 8640 service manual $10
extra 8640 CPU's (Firmware)(to convert other 8640/4's you might own) $10
8655 CPU's (Firmware)(to convert 8655's to the ham band) $10

From: Robert Wilson <wa4puj@peoplepc.com>
Message-ID: <usb8ktdvak4u74@corp.supernews.com>
Source record: 37574

I made a weekend hamfest purchase of an MFJ 432 Voice Keyer that had no documentation with it. I found a text Instruction Manul online but I'd like a schematic. If anyone has one they could copy and mail or scan and email, please let me know. I'll be willing to compensate for this!

I see from an Internet search that these Keyers are subject to some problems but I'm hoping that with adequate info, I can make mine work.

Thanks

Bob - WA4PUJ

Palomar noise bridge. Used to tune antennas by listening for maximum noise in the receiver. This unit is very small and easy to carry in the tool bag or box. Powered by a 9 volt battery.
This unit is currently sold by Palomar. Check their catalog for details.

Used once and returned to the box. I will safely ship this to you in its original box.

Asking only $40.00. Plus shipping via USPS Priority Mail.

Rich, W6VX in Sherman Oaks CA

For Sale: A VERY nice Heathkit HW-100 WITH HP-23 power supply. Comes with power supply to xcvr power cord, TWO hand mics (one the original Heath, the other a Turner that looks like a Heath mic...) I purchased a NEW W7FG Vintage Manual for the transmitter. (But not for the power supply.) The manual set me back about $40...but I'll include the manual FREE with the purchase of the rig. I bought and installed two brand new 6146 finals for it AND a new 6CL6 driver and neutralized. I'll toss in a pair of spare 6146's and 6CL6 into the deal.

No dents, no rust, original paint and only a couple of minor scratches. Original knobs and paint. A VERY nice rig for the collector or for a first rig.

$295 plus $14.95 towards shipping and insurance. (The xcvr isn't all that heavy...but the power supply is.) If you are short on cash, we can run the tranaction through my little ham/swl business using your Visa or Mastercard.

5219. AEA CK-2 Contester Keyer

Newsgroup: rec.radio.amateur.equipment
Date: 2002-11-04 01:49:13 UTC
From: Terry Ashland <t_ashland@yahoo.com>
Message-ID: <aq4jmksjm1@ins22.netins.net>
Source record: 37580

Hi All! I purchased an AEA CK-2 Contest keyer recently and it works great except for the keypad. Unfortunately the 1 and 3 keys do not function. The problem is, the one key is important because you can program in your beacon message, set up serial numbers, etc. I contacted Timewave to see if they might have parts, but they had none. I would really like to get this thing working. Does anyone have any idea what the problem might be? The keys feel fine, but I have no audio feedback when I press these keys like I get when I press any of the other keys. The keypad is a 12 keypad (0-9, *, #). Anyone have a dead CK-2 keyer for parts?
Thanks and 73,
Terry, WK0F

I have a Learadio model RH-4 Junior Unihand Reel
with mounting brackets... I believe this was used
on the Stinson L-5... It is in excellent condition...
It currently does not have the wire, but can put
some on the reel...

I need an RCA AVA-120 reel, which was used on the
Aeronca L3Bs and The Piper L4s... Would like to
make a swap... Or am willing to but an AVA-120,
if anyone has one...

Thanks

```
The only people who worry about CB'ers with amps
are self-righteous ham radio operators who think that
their pathetic hobby is the centre of the universe and
they have some kind of a duty to catch "radio criminals".
(and yet if you goto a hamfest or e-bay lookin for an
amp, 9 times out of 10 there's a ham op behind the
table selling it who will gladly look the other way for a
wad of cash and a thank you. Bada-Bing! (just tellin
the truth and they can't stand it)

From: Richard J <nospam@nospam.mah.se>
Message-ID: <aq5phngti1@news.lth.se>
Source record: 37586

Hi group -

where -INSIDE EU- can I find decently priced NiCad replacement packs for the BP-7 battery for an old Icom handheld?
It's the 3 inch high casing I have (13.2V/600mAh or so, not the 1200mAh variant).
Tips appreciated. Web searches turn up a lot of US companies, but US is a no-go with the shipping, VAT and customs on top of price.

Cheers & TNX for your time

I remember that one!

As I recall, the original manuals were not that helpful if you were unfamiliar with basic S/A use. I had an Elmer when I worked in the lab.

Have you tried HP's web site directly?

I've noticed that a lot of equipment manufacturers have become much less anal-retentive about documentation in recent years.

5236. REPORT: For Sale: MINT Radio Shack HTX-252 Two Meter

Newsgroup: rec.radio.amateur.equipment
Date: 2002-11-04 16:19:54 UTC
From: wa8mea@hotmail.com
Message-ID: <8a260fb2.0211040819.9a8d1dc@posting.google.com>
Source record: 37597
Cross-posted to: rec.radio.swap,rec.radio.amateur.swap,rec.radio.amateur.equipment,alt.ham-radio.marketplace

The guy who wanted this has evidently backed out of his agreement to purchase. I haven't heard hide nor hair from him in over ten days. So.....we will put it back out there. However, this time I think instead of waiting for a money order in the mail, it's best we just put the transaction through my ham/swl antenna business using a Visa or Mastercard. This will protect BOTH of us. (Plus...it will get the rig to you quicker.)

FOR SALE: Radio Shack HTX-252 two meter FM rig. MINT condition. Only used for a few months. Never mobile. Used it here at the base for a back-up during severe weather. So not many hours of operation on it. 25 watts high power...10 watts low. Rcvr goes up into the PSB and NOAA weather portions. (I use to listen to our sheriff on it.)

Original manual, box, DC cord and stock hand mic.

$95 and I'll pay for shipping and insurance.

First e-mail gets it!

I've heard lots of bad reports about the quality and reliability of the
FT100. I've heard none with the 706 series except for the poor vhf rx on the
original 706 (there is a simple mod for this).

Get the '706.....

My personal opinion...

FOR 100D: If you plan to use it mobile, the 100D has a vastly superior noise blanker (superior to ANYTHING I found, not just the 706), optimized for ignition noise. If not, they're both good radios.

FOR 706: The 706's controls are a little larger and maybe easier to use.

AGAINST BOTH: I would hate having to quit listening to the local repeater(s) any time I wanted to operate HF... AND... losing ALL comm capability if either my HF or V/UHF radio had to go back for service. I always use separate HF and V/UHF radios. I own a 100D and use it only for HF mobile.

I have a FT-100 and really like it. I don't use it mobile though, more as a shack accessory. From other hams I have talked to and from ARRL test measurements the FT-100 clearly has the better receiver. It has an incredible receiver for such a small radio. The noise blanker is also top notch and unlike the Icom it has DSP bandwith control (at least the first two 706's did not have this). The transmit audio is also outstanding with hand mike. There is no doubt though that Icom has had a better reliabilty record at least compared to early FT-100. I find the fan noise a bit annoying on the FT-100 when you transmit though - of course a shack is a lot quieter than a car, I am not sure how the Icom is as far as fan noise. Also I am not sure how robust the antenna pigtails on the FT-100 will be for the long run. Good luck. ---- Steve KK9ZZ

A few things to consider with the 706 that I found to be better for Me was the fact that the 706 has better drive , It is much easier to use at night while driving because the display is big and easy to read , Even though I must admit that the 100 does have a far better receiver but the 706 still hears very well and I think one small thing that turned Me off with the 100 in the mobile is the fact that the mic plugs in to the body of the radio and not the detachable face . I have the 706 mounted under My back seat of the pickup and the face on the dash and I can take the face off the mount in 1 second, put it in My pocket with the mic and I'm gone. and it reattaches just as quick.

Due to long term travel plans I am having to sell some of my radio and test equipment. I therefore have for sale my Trionyx TR-1000 frequency counter with its manual. The counter works perfectly and is in excellent cosmetic condition. It has the following specifications:

range: 10Hz-600MHz
display: 7 large 0.4" LED digit display
gates: 1 sec and 0.1 sec
portable: internal NiCad battery pack
power input: 9-15V AC or DC adapter (wall wart) at 300Ma
dimensions: 13x14x7 cm
weight: 700 grams including NiCads
flexible rubber duck antenna for RF sniffing
BNC inputs
manual

I am asking US$49 for this counter and that includes surface shipping to any address in North America. Please contact me by direct email if you are interested.

The FT-100 wins on features, price and receive sensitivity but be aware there are some mods that are easy and sometimes need to be done, see the ft100 group on yahoo groups and read the FAQs. If there is a reliability issue, I don't know as I have a 2 yr. old ft-100d with no known repairs and no mods. Get the FT-100d, it has all the latest features, if you use AM you will need the $80-120 filter I've been told.

Wait a couple of months and watch for a new offering from Kenwood. It is
only my opinion, but I believe KW has a small HF rig about to come to market
to replace the TS50.
Good luck - I chose the FT100 - Really enjoy it too. Liked the ATAS100 idea
for mobile and portable. I have made a simple portable mount and ground
plane for the ATAS and can quickly lay out and be operating in just minutes.
Bought the FT100 and ATAS100 used. No problems, just fun.

I have an FT-100D and love it except for one small gripe. On
VHF, the scan rate (channels per second) is pretty slow. Only a
few channels per second and there doesn't seem to be any way to
speed it up.

I really had to stretch to find a gripe, didn't I? :-)

Before I picked up the FT-100D, I did a comparasion of features, read
reviews and asked opinions on the net. My results were that the
FT-100D had more negative aspects (such as the so-called "SWR" mod and
mike mod that some say NEED to be done, no alpha-numeric display and
no computer programming), but it also had more positives than the
706MkIIG (such as more memory channels, wider RX, better NB, lower
price and more standard features). I'm a 100% Yaesu ham, not because
I think that only Yaesu makes good products, but because I research
before a new purchase and I seem to keep finding Yaesu's products the
best. My first Yaesu was an FT-1500 2m FM, then the VX-5R, then the
100D, and now the FT-8900.

Go to groups.yahoo.com and check out the FT-100 grounds there. I'm
sure you'll find some good informationt here.

Hello, I have a 6 Position Tower Mounted Coax Relay made by Top Ten
Devices. I have two and I am selling one. It handles 1500 watts to
30 MHZ. Go to http://www.qth.com/topten/twrsixwy.htm
for full specs and a picture. Please email me with any questions.
I will ship for $100.
Thanks, Mike N0XD

Source record: 37645

Hi all,
I have a Icom 706MK2G, I really like the radio, but the quick spin finger hole in the VFO knob rattles when I go down the road, I travel a lot and usually just pull the knob off so that I don't have to listen to the rattle, I have looked at the back of the knob to see if there is a way to take it apart to see if I can put a thin piece of felt behind it to tighten it up to correct the problem. Any ideas on how to do this? Or what have others done to correct this, I can't believe that I am the only one with this problem.

5285. Goldline - or classic ?? which one would be better suited?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-11-06 06:00:06 UTC
From: zach@benders.net
Message-ID: <7bc3548.0211052200.5b7fceb2@posting.google.com>
Source record: 37646

Hi

I am planning the purchase of an icom 746 pro or a Kenwd TS 2000. My question is that I am also thinking, of purchasing a Goldline or the Classic mic with the radio.

I know that different mics serve different voice modes, more efficiently then others. Would the goldline be a better choice for an all around rag chew mic, using AM, SSB, and FM? Or would the classic be better suited for AM or SSB In general?

I understand the goldline gets pretty good reviews, but I don't know that much about the classics performance? Anyone have one or both of these mics, and could give some insight?

I am at also wondering, who makes a good brand, and or model of footswitch to key the radio?

Thanks for the help
Zach K7LTF

Ah, but there's more to it than that. There are other versions of Morse Code besides the International version. Apart from the largely defunct American Morse Code, I'm talking about the Japanese and Chinese versions. I by no means understand either language, but I know a little about their structure and their versions of CW. Chinese has thousands of characters, each equivalent to a word, and these are sent in International Morse as such, but as 5-digit numbers! This takes so long to learn that it used to take 5 years full time to become a ship's radio operator in China. I say used to, because nobody uses CW at sea anymore.

Japan uses a limited set of these Chinese characters (1,950 only!), plus three different 'syllabaries', each having 22 characters, called that because each character represents a whole syllable. Which syllabary is used to spell a particular word depends mainly, I understand, on the type of thing the word means. To send Japanese in CW, each word has to be first tansliterated into the katakana syllabary, even if it is one that is written as a single Chinese character, and then there are 22 combinations of dots and dashes that represent the katakana characters. Since each dot-dash combination represents a syllable, rather than a letter, it would be hard for us even to write it down. But to take a CW test for a ham licence, they have to learn International Morse Code, which is not well

adapted to sending Japanese. Guess which way they will vote next year!

As for other languages that have alphabets, but not the Roman alphabet, they mostly do go straight from their own characters to the dot-dash combinations for the nearest Roman equivalent, but I think they have some extra letters in some cases, as do many countries that do use the Roman alphabet, who have accented letters that give dot-dash combinations that don't exist in English.

The pro CW testing camp like to make a lot out of CW being international, but it's not the whole story.

Mark,

I have had them both, the 706 MKIIG and now the FT100D. Both are great little radios, but be prepaired to have multiple menus for each button, and HOW do they get so much functions in such little packages??

While spending many hours operating both here are a few of the things that I noticed..

The 706 has 100 memory channels, FT100D has 300.
The 706 has a better remote console hookup (single cable) the FT100D has to have 3 cables run (mike,speaker, and console)
The FT100D has a little better receiver and better noise blanker than the 706.
The 706 has more audio output than the FT100.
The console on the FT100 is smaller in size than the 706 (fits in consoles better)
The FT100 has two fans on the rear that kick in on the first transmittion, and because being two sometimes there is a harmonic between the two fans, the 706 has one internal fan.
The FT100 is more sensive to high SWR than 706. (neither one like more than 2:1)
The FT100 will receive on 220 mhz where the 706 can't.
The AmCom Autotuner for screwdrivers will only work in automatic with the 706 and not the FT100 (incase you are considering a screwdriver antenna.)

Both are fine radios, but don't count on the internal DSPs from either radio... Go buy a ClearSpeech speaker from AmCom, it works and WORKs better than either radio.

All this being said, I am now in the process of going to a TS2000 for a mobile, for the extra filters and features that are in the Kenwood, but not because of any trouble from either one..

Good luck and I know you will enjoy either one..

Hi, Zach...

In my opinion, the ideal audio system is the Heil Gold Line with one of W2IYH's 8-band equalizers.

Each radio is a little different, as is each person's voice. The Gold Line is a great, full-response microphone. On my 756PRO, it's the first thing I've used that has let me run pure VOX... all the time... without ever a false key-up or any hassle from the anti-vox, etc. And it doesn't seem to matter how loud I have the receiver volume set. It has been a joy to use. However, when I added the EQ, and got it adjusted to my voice, everyone said the EQ was a very worthwhile improvement. The PRO's built-in audio adjustments just couldn't come close to doing the same things.

Sorry, no experience with AM on modern radios.

Heil also makes an excellent foot switch. I own one but the VOX works so well with my Gold Line, I nevr use the foot sw.

Good Luck... Ed

Quite so, and I can immediately tell you four such "letters":
The German CH is represented by ---- (four dashes)
The Scandinavian characters AE by .-.- OE by ---. and AA by .--.-

I'm just starting out in small-rig QRP and have two dumb questions.

1. How do you connect a longwire antenna to a tuner that only has a coax connector for output, as many lightweight QRP tuners seem to do?

2. How do you tune up the antenna without an SWR meter, as most QRP rigs and tuners don't have one?

Thanks in advance for your patience .

rkhen@softhome.net says...
>
>I'm just starting out in small-rig QRP and have two dumb questions.

Nope... NOT dumb questions at all!

>1. How do you connect a longwire antenna to a tuner that only has a
>coax connector for output, as many lightweight QRP tuners seem to do?

Solder the end of the wire to a standard banana plug, which will plug
right into the SO-239 receptacle. Or, solder the wire to the pin of
a PL-259 plug (making sure to insulate the wire so that if it should
touch the shell of the connector, it won't short out). The banana
plug is the easiest way and it works well.

>2. How do you tune up the antenna without an SWR meter, as most QRP
>rigs and tuners don't have one?

You really do need some sort of VSWR indicator. It's not hard to
build one (refer to any of the late W1FB's QRP books, or to most
ARRL Handbooks). You can also use a cheapie CB-type VSWR meter.
You'd be surprised at how accurate they really are at HF. Many
good QRP-type tuners DO have a VSWR meter built in, by the way.

Unfortunately you will have to get a different tuner. For the antenna, you could build some type of matching circuit that would allow you to use coax, perhaps.

I just acquired a Simpson Model 269 VOM. Beautiful old meter, although I am not clear why I might need it :-)

It had two batteries for resistance measurements. One is a common D cell. The other battery slot has a 22.5v battery that is the same size as a common 9v battery, except that there is a connector on each end. This battery is dead. The slot holding this battery looks like it was made for a larger battery. Anyone know what battery should be used?

Thanks,

Bill Ogden

My 260 has a 1.5 v and 9V battery; a 22.5v battery like you describe was used
in old photo equipment - try a photo shop.

Check the SG switch position on the back of the unit.

Excuse me??? All the SG (Screen Grid) switch does is remove voltage from the screen grid of the final tubes. He is saying he has no voltage other than what lights the pilot lights of the radio.

It has been many years but I would look at the regulator board. The radio uses both High VOltage and low voltage. The HV is a standard transformer deal. And I think the 12v / 5 v or whatever it used is done with a seperate regulator card.

Sorry, thats all I remember about that fine ole rig.

Just what everybody needs to feed a radio with 300-3000Hz (or less)
bandwidth.

I agree whole heartedly. I had the 706 in the car and I couldn't
work a thing cause the N.B. was totally useless. Replaced it with the
FT-100 and work the world. I hear the weak ones now real easily and
it is a pleasure to use. The FT-100 does take a bit to get used to.
Best to install it in the house first to understand all the functions,
then install it in the mobile.

I would like to find a nice 2 meter/440 dual band mobile that is in good condition and is sturdy for mobile use. It need not have dual receivers or cross band repeat capability but I do want a good sturdy rig.

If you have something along these lines for sale please let me know your asking price... otherwise I will probably buy an Icom 207 new next week.

Thanks

FS - Two 6 element TB6EM Telrex Triband beams.
One antenna FB. Both 15 meter traps are bad on second antenna, otherwise
second antenna is FB
Have instruction manual. Detroit area.

What if the other station is using Japanese Morse to send katakana
characters to you? Or didn't you read my post before replying?

5327. Kenwood F7E Handheld advice, please

Newsgroup: rec.radio.amateur.equipment
Date: 2002-11-07 07:29:45 UTC
From: olly <o.morgan@brutele.be>
Message-ID: <aqd4r5kvi1@news.brutele.be>
Source record: 37539

Hi,

I've had a Kenwood F7E for a few months. It's working fine on the 2m band
which is mainly what I needed it for.
However reception is difficult on the 88-105 MHz band, I can only listen to
a small number of the comercial radios that are available.

I assume this is an Antenna problem? Can anyone recommend a solution to
this?
Thanks

Olly Morgan

Anyone using their Kenwood TS850 with a V/UHF transverter? I'd like to know how you supress the RF out from the 850's antenna jack during TX. I have odne the IF OUT mod to drive the transverter, but Kenwood suggests a choke method, which I don't entirely trust. Wondering what the general population is doing.

Please respond to ve3tmt@yahoo.ca

Thanks,

Max

5331. Screwdriver Antenna Decision

That makes sense. My latest AES catalog says the Classic is available with the hc4 or hc5 elements, or the Icom iC element. The Goldline is available with the hc4 or hc5 elements.

There are also "vintage" setups available for either microphone, but the original poster says he's thinking of a new Icom or Kenwood, so this wouldn't be applicable to him.

That's right. I believe I bought my GL with the GL and "DX" elements. After a lot of experimenting... settings of both the IC-756PRO's internal EQ and the W2IHY external 8-band EQ... I find the GL element is the only one I ever use.

And (this won't thrill most tinkerers) after some initial experimentation during the first month, I never change the EQ settings. I got them "right" over a year ago, then tried some changes on various stations... they always sent me back to the initial settings. I tried switching the EQ in and out... they always liked it in. I tried the two different elements and they always pointed me back to the GL full-range element. The GL and W2IHY EQ has been a great system at least for me.

BTW... I did use this system also on a Collins S-Line and KWM-2 when I had them. Worked fine there, too, though the settings were different. It made my EV-664 sound like a muffled tin-can and string. Also vastly superior to a D-104 on the Collins stuff.

The normal manner is to send in English. In case you don't know English is the language of choice in the communications world. In otherwords no one is going to be sending in Japanese in the real world of international commo.

Thus Q/Z signals are universal.

You don't have to tune around HF much to hear Spanish, French, German,
etc. Let me see, your argument is that Morse is an international language
because everyone speaks English? I must be missing something here!

Message-ID: <Xns92BFBC83EB61Bnobodynowhere@68.6.19.6>
Source record: 37464
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

Thanks to all who responded to my question. I must have received 50 replies. The concensus seems to be they're both decent radios.

Altho I'm leaning slightly toward the 706, I still haven't decided for sure...it'll likely come down to the best deal.

Thanks & 73... Mark AA7TA

Hi,

I have a F9FT 5 el 6 Mtr beam that I'm trying to find some replacement parts. Does anyone know of a distributer of the Tonna F9FT antennas in the states. I have email their store over seas several times, but have received no answers. I would like to get this antenna back in the air.

I can be reached via email, just remove the extra spaces.

Walt, KA2NJF

: >>
: >> 73 de N3KIP
: What if the other station is using Japanese Morse to send katakana
: characters to you? Or didn't you read my post before replying?

Then you reply with Q or Z abbreviations to tell him to reply in kind.
Most have learned enough CW and English to be able converse
in a highly abbreviated exchange (although entire newspapers
used to be sent via Morse before teleprinters). In any case,
another station wouldn't be sending Katakana(sp?) to ME for
any reason. Yet numerous QSL cards line my shack from hams
that I would have little hope of making sense of on Phone.

Consider this: Thousands of hams "used to" contact one another
with CW all around the world without knowing each other's native
tongue before ignorance became fashionable. Indeed civilization
seems to have largely pre-dated the Internet by centuries.

Electric Fuel pump is the most notorious... When you first turn the
key on (engine off) the pump will run for a few seconds then turn off.
You should be able to hear if this is it.

The fix usually involves dropping the tank and hash filtering the
fuel pump motor at the source, and most any mechanic won't have
any idea what you are trying to do. If you intend to do it yourself,
make sure the women and children are well out of earshot for the
weekend.

So it is the "Q" and "Z" signals that are the "universal" language,
not CW. The "Q" and "Z" signals could also be used on any other of the
newer modes making them as universal as CW.

5363. FS: HV Diode modules for large HF amp

Newsgroup: rec.radio.amateur.equipment
Date: 2002-11-08 14:38:51 UTC
From: GaryH <garyh@bellsouth.net>
Message-ID: <mYPy9.4866$ds6.550@news.bellsouth.net>
Source record: 37474

I have 4 diode blocks for a HV power supply for a large
HF amp. I don't have the rating but believe they are
10 KV modules based on the size. I took them out of
a Large amp that I restored to stock diode configuration that
used three 3-500z tubes and a 3500 volt plus power supply.

I suspect they are 1 Amp rated. They are 3 3/4" long, 1" deep
and at the highest point, 2" high with screw terminal on each end
and polarity marking on the bottom. They are ideal for a homebrew
project or upgrade the diode bridge on an existing amp. I can
send you a picture if you are interested. These are quite expensive
if purchased from RF parts etc but all I am asking is a reasonable
offer for the 4 modules.

I have been posting such items on Ebay but have been asked to list
items on newsgroup first. If no reasonable offers are made I will
place them on Ebay. Check my ebay feedback for proof that I
only do up fron deals. Ebay id is garyh@bellsouth.net.

Thanks

Gary K4MT

5364. WTB Standard C-5900

FS: Complete Collins S-Line, all Round Emblem. Collins 75S-3C (with CW mech. fileter), 312B-4 wattmeter phone-patch console, 32S-3 transmitter, 516F-2 (in cabinet) and 30L-1 linear amplifier. The transmitter, receiver, and power supply have all been sent to Bud Whitney (Collins specialist) last year to be brought back to factory specs. The power supply was rebuilt completely to solid state and Bud's new specs (AC isolation relay, new filters, new choke, etc.). This S-line is currently on line and can be heard on Wednesday nights on the Boatanchor Net on 3870 khz. I have owned it for 20 plus years and is very nice (excellent) in physical appearance (knobs and dials all look nice). It also includes original manuals. $4200 takes all. Call for details at (979) 693-1461 eves and weekends. Thanks, Mike.

Hello,
just a suggestion from my side of the water... sand a fax to Tonna in Rheims, France and ask Franck Tonna, F5SP for the spare parts you need. He is very happy to service all customera around the world. I know it from my own needs in the past. It is hard to find a dealer who carry spare parts. Just note it on a copy of manual, send it by mail to Franck and I am sure he will response.
Greetings
Hanno, DG8JZ

Dick-

That Standard radio was a $900 item when it came out, and I always wanted one too. Have you seen the new Yaesu FT-8900? It has 6m, 2m, and 70cm, and 10m FM too. Yaesu bought Standard a few years back, and I have been told the 8900 has similarities to the Standard 5900. It sells for about US$470 new. I have been very happy with mine so far-I sold my Icom 2m/70cm rig, and my Alinco 6m will be next. 73-

Not with tabs.......been thru several searches on several battery supplier's
and Radio Shack's sites.

I have CR2016 cells here.......just need tabs to mount it behind the
faceplate where the original position is.

I don't have room for a cell holder. (which would be sweet).

Thanks for the reply

5382. Help ID this key

Newsgroup: rec.radio.amateur.equipment
Date: 2002-11-09 00:53:50 UTC
From: Toscano <toscano2@ix.netcom.com>
Message-ID: <aqhcehsu1@slb4.atl.mindspring.net>
Source record: 37482

Received this a few years ago as part of a lot of military equipment. Now I am a ham and have a different perspective on this previously-useless item...

All parts appear to be flat-finished metal except for possibly wooden knob on keyer and black plastic "housing" for contacts. Baseplate measures about 2 x 4 inches, has for holes for mounting. Bottom is stamped with reddish-colored "US" with an anchor (I am assuming this designated USN). Top has white markign embedded in it: CMI-26003A. This is the only distincting marking except for the "US" on the bottom.
Any help in IDing this appreciated.

Source record: 37398

I could also use the programming cable only. Both sell for $39 new, I will be happy to pay a fair price.
I can also use a vx-5 battery if you happen to have one.

Or if you like i have some things to trade, I have:

1. 50 of hi quality LMR-400 coax. Very low loss, comsidered by many to be the best. Ask around.

2. Radio shack base antennas, ground plane wide band recieve. these are rather tall at 6'but work fantastic.

3. Johnson Police model car radio speakers. Very solid and sound better than motorolas. 5"x5" I have 2. work great on a base or in the auto even w/ windows open.

4. Maha rapid charger for any model HT batteries nimh or nicad. conditions them as well.(wont do lithium batts)
model crx-333

Thanks in advance,
N0JAM

This is a Navy "Flame-Proof" key. The CMI signifies it was
manufactured by Moulded Insulation Company. The same design was also
made by several other companies.

Google found several hits for CMI-26003A, including some nice photos.

On phone, they are often used incorrectly as some who are phone ops only
didn't study the usage of Q signals in depth. One example is that some
think QTH refers only to your home rather than location. I.e. they do not
understand that one can refer to one's home QTH, work QTH, or that QTH
without a modifier simply refers to the current operating location.

resistor replacement and since I have a lot of new parts laying
around I
was wondering...especially with resistors when it comes to
replacing the big
ones (in size and wattage that is) does it matter if I use
ceramic or any
other kind as long as the value is the same and wattage the same
or higher?

Thanks for the read

Gil

Most often it will not matter - however - it depends on what the
resistor is "doing" in the circuit. Many of the higher power
resistors are of the wire wound varienty and exhibit inductance.
In resonate or RF circuitry they could be a disaster if used when
a carbon or non-inductive resistor is specified. Likewise many
of the carbon film resistors are made by wrapping a film of
carbon film around a core and these may also show inductances.
I learned this the hard way by blowing several of them up in the
cavity of a 432 MHz transmitter by using radio shack 2 watt
carbon film resistors when the schematic called for non-inductive
types. Also check the voltage ratings - they are all not the
same.
In a VFO, use only exact replacments unless you don't mind having
having your dial somewhere other than where your actually tuned.
Generally, I would not replace a resistor unless there is
something wrong with it.

Due to long term travel plans I am having to sell some of my radio and test equipment. I therefore have for sale my Trionyx TR-1000 frequency counter with its manual. The counter works perfectly and is in excellent cosmetic condition. It has the following specifications:

range: 10Hz-600MHz
display: 7 large 0.4" LED digit display
gates: 1 sec and 0.1 sec
portable: internal NiCad battery pack
power input: 9-15V AC or DC adapter (wall wart) at 300Ma
dimensions: 13x14x7 cm
weight: 700 grams including NiCads
flexible rubber duck antenna for RF sniffing
BNC inputs
manual

I am asking US$49 for this counter and that includes surface shipping to any address in North America. Please contact me by direct email if you are interested.

REALISTIC PRO-2040 SCANNER - Canadian Version
With Descriminator tap Mod, RCA type plug added to rear of unit to connect DATA SLICER which I'm also selling
Excellent scanner, I've decoded ACARS, FLEX, POCSAG paging, MDT, MOBITEX, etc with the data slicer and my PC
I will even include the software. This scanner can receive cell phone transmissions also. Original box, manual,
telescopic antenna and power adapter included. -$115.00

REALISTIC DX-392 Shortwave with Cassette Recoder!! With Mute and Beep Mod!, Manual, excellent condition, NO BLOWN FETS! - On Ebay Now.
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=800394541&rd=1

GRUNDIG YACHT BOY 400PE
With Mute and Fine Tune Mod!!!, Manual, Original box, carrying case, Wall Adapter, long-wire external antenna,
Hardly used! -$105.00

BELTEK 23 CHANNEL AM TRANSCEIVER
This one's an oldie, looks like a mid seventies transceiver, couldn't find anything on the web about it. It measures about
12x10x4 in an all metal cabinet, it has a 120v ac as well as connections for 12v mobile. This is a solid state transceiver
and it works. -$15.00

I'm located in SW Ontario, shipping to anywhere in North America is about 8-12 dollars for these items.

Regards.

: > I always have used Q signals on phone. I fail to understand why some
: > people (such as the ARRL) deprecate that practice, which I am convinced is
: > a very good one.
: >
:
: On phone, they are often used incorrectly as some who are phone ops only
: didn't study the usage of Q signals in depth. One example is that some
: think QTH refers only to your home rather than location. I.e. they do not
: understand that one can refer to one's home QTH, work QTH, or that QTH
: without a modifier simply refers to the current operating location.
:
Indeed a heavy accent can make CW a lot faster than resorting to phonetics
again and again to try to get anything meaningful accross. And yes, Q sigs
can be sent over other digital modes as well. I prefer CW and RTTY
because the exchange can be done much faster than Phone. CW has the
edge for punch.

I don't care what anyone who doesn't know has to say about it. I used to
"hate" math and wonder what it was good for until I just stopped hating it
and learned it. Impatience and Hatred of the unknown are -NOT-
conducive virtues.

5410. FS: 400 watt VHF/UHF Linear Amp..

Newsgroup: rec.radio.amateur.equipment
Date: 2002-11-10 00:21:00 UTC
From: ga_boneyard <ga_boneyard@hotmail.com>
Message-ID: <MDhz9.661835$vq2.4672033@news1.east.cox.net>
Source record: 37421
Cross-posted to: alt.ham-radio.marketplace,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.swap

Put a big signal on 2M, 220 Mhz or 432 Mhz..

AM-6155/GRT-22 Linear power amp, 225-400MHz, 50W out (AM rating -- conservative) 10W in, Eimac X651Z/8930 final, extensive metering, rack mount 7" high, 80 lbs, ITT (model 3212), Part of AN/GRT-22. FAA Surplus. 110 VAC supply.

This Amp uses Emiac X651Z/8930 in silver-plated cavity-drawer; 175-turn TUNE counter dial. Main chassis has solid-state power supply and buffer amp/mulitplier; panel meter monitors voltages. Requires 105/120/210/240 VAC 50-400 Hz and +20 V req 60 ma. +20 V keyed; 7x19x18.5, 80 lbs shipping weight.

The HV Supply from AM-6155 is Loaded with GREAT parts to include a 1752V at 270ma transformer, 8HY 300ma choke, 100K ohm 95 watt resistor, 2x5mfd 3KVDC capacitor, & rectifier circuits card.

One ham has used a 4CX400A (available from Svetlana)to raise the output power to 450 Watts. Others have reported that you can run the 8930 (electrically identical to 4CX250R/7850W) at about 400 watts on 432 Mhz...

A quick Google search on "AM-6155" produced many hits of conversion information.. Check it out.

Used - Excellant Condition (NOT TESTED -- because it is not converted, yet!) $295.00 plus shipping from zip 31088.

Email if you have any questions.

73,

Larry Keith, KQ4BY

5411. Thanks to AC6V

Too frequently those of us who use free web resources don't thank the people responsible for them. I purchased a piece of used equipment that came without the manual.

Where to get a manual? Went to AC6V's site, went to the index, clicked on manuals, and within 5 minutes I had one ordered.

THANK YOU, SIR.

Source record: 37423
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.swap

I am not too far from Ken and have another such Telrex. It is on the ground, assembled, and on saw-horses. The rear two elements do not have traps. They are 20 meter and 15 meter reflectors. Those two elements broke in the middle (in a LOT of wind). I have the pieces. If you buy Ken's antennas, consider buying my antenna too. You could then have two working antennas and a lot of high quality parts. (Or three antennas, one without 15 meters)
The beam is a real good performer. I worked a lot of DX with it.

Source record: 37440

Would like to get in touch with the Ham that bought a Hallicrafters S-85 Receiver from me at an Ontario, CA, swap meet about 10 years ago or so. It had a Heathkit Q Multiplier that went with it and it had been adapted with a phono plug on the rear of the chassis for the connector.

5430. HELP with TX-455

Newsgroup: rec.radio.amateur.equipment

Message-ID: <aqlbug$hmq2@imsp212.netvigator.com>
Source record: 37441

I have got TX-455 second hand tower in Hong Kong.

It happened that the pulley had been removed during the transportation and after it was disassembled for cleaning.

It the present moment we are having some doubts how to assemble it back...

Could somebody please e-mail any layouts of the pulley or some pictures ?

The problem is that we are not sure how to install sprinkles in pulley's frame to let it go one way and be blocked itself by the weight of the section...

Hi Folks,

Does anyone out there have any information on the ICOM U-101 ? This is a 12 channel, programable, UHF mobile radio and I would like to be able to reprogram some of the channels. Apparently the device used to carry out the programming is an EX704 so any info on this would also be greatly appreciated.

5442. FA: Wireless Set#19 MKII, Exc/Mint, complete installation less only the key

Newsgroup: rec.radio.amateur.equipment
Date: 2002-11-10 19:28:36 UTC
From: Mark@His.Desk
Message-ID: <uoctsug7194dfmu8n7nkg866rpdd40nnm9@4ax.com>
Source record: 37353

Fellow Boat Anchor Enthusiasts,

I've just put up a complete (less only the key) WS#19 set on
EBay. The direct url is

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=734264334

The description as it appears on EBay (less the pictures) appears
below. This set was bought surplus by the original owner in 1946
and partially unpacked. Then it sat for nearly six decades in a
favorable environment (indoors, Colorado). Nearly everything is in
mint condition.

The auction ends at about 10AM PST Sun 17 Nov.

--Mark

==========

Here is a Wireless #19 Mark II radio set, missing only
the key. Included are the transceiver, dynamotor supply,
variometer, mounting base, three control boxes, HF and
UHF antenna bases and whip sections, five headset/mike
sets, canvas cover and satchel signals bag, all
interconnect cabling, and miscellaneous hardware.

Major items have matching serial numbers (1205). This
is the Sherman Tank installation, and was the last U.S.
contract built, but never delivered. A complete inventory
of all items appears below.

I have NOT operated the set, nor do intend to. The reason
is that I know fans of the older gear can be very particular
about the methods used to first fire it up after almost 60
years of inactivity! I'm representing it as complete
(except for the key), apparently unused. Most items have
the original I.D. tags attached.

Shipping is EXTRA, over and above the winning bid. I will
be carefully packing it and shipping by UPS (or whatever
carrier works best) in several packages. Figure on about 150
pounds total NET from Colorado Springs, CO. Insurance, if
desired, is the responsibility of the buyer. Payment terms
are cashier's/bank check or money order.

I'll be available via email for the duration of the auction to
field any questions you may have, supply additional pix,
clarification, etc.

Thanks!

COMPLETE INVENTORY of WS#19 Mark II, Serial #1205:

Condition of all items is excellent+ to mint EXCEPT where
noted. Items not in excellent+ to mint condition are
preceded by a "***", with further explanation.

Wireless Set #19 MKII #1205, ZA 10178, CZR 12440-PHILA-44, PC 92049C

Supply Unit #1 #1205, ZA 3108, Canvas Strap type, PC 75608C

1 - My understanding of QTH is location. What is the argument here? I
can't say that I've noticed much incorrect use of Q codes by phone ops. I
don't get it. Anyone can read the definitions of the Q codes.

2 - If you bothered to check, just by looking up my name you could easily
tell that I passed my Extra when the code speed was still 20 wpm. All I
said was I only use 'phone.

My point was only that I don't buy into the 'Morse as an international
language' theory. Just yesterday I was listening to a QSO in Spanish, and
was able to pull out the callsigns, cities, names, etc, and I didn't even
do any Spanish classes in school. They were using international phonetics
and Q signals.

New, it ran $4000 to $5000. That's why.

Just because Kenwood has figured out how to make an upscale 706 for $2000
doesn't make the 950 any less a rig.

Hello All. For those looking at the Icom IC T2H, and/or Icom IC-V8 2m HTs. Beware of ebay sellers trying to sell these radios for inflated prices! AES and HRO sell these radios for $99.95, and right now you get a FREE nicad pack. These are good radios, just a head up for the buyer to beware of ripof artists!

I have to agree. It's not the sellers' fault, it's overanxious or uninformed buyers who pay more than they should. Don't blame the sellers... they only set the initial price, not the final price.

Get EchoLink - licensed hams can use it to patch your PC into systems around the world, not only to listen but to chat. EchoLink + soundcard + mic lets me make contacts from the US on 2m repeaters in Australia, Chile, Alaska and anywhere else they happen to have a patch.

E-Bay pet peeves, situations experienced for me to learn from buying and selling as well as suggestions for both buyer and seller. And it really has nothing to do with E-Bay "directly".

1. Most people lately it seems, think E-BAY is a "secure" way to buy - sell. E-Bay can not provide 100% guarantee someone won't be ripped off. I say this because at one time prior to E-Bay's popularity, I was able to sell items pretty quick on newsgroups. Now it seems MANY have problems doing that, not only me. I have sold many items on E-Bay for far more than what I was wanting or asking in newsgroups. The down side, I had to wait for the auction to end and await payment.... I prefer selling a lot faster. I'm not knocking E-Bay as it did get me more...but more is not always the answer. Not for me. I like to clear the stuff out, not have to "wait".

2. It kills me when people bid on an item, then bitch about it. Be it received in a defective manner of some sort or too much or whatever. EXCUSE ME... NO ONE HOLDS A GUN TO YOUR HEAD TO MAKE YOU BID.....IF you don't like the chances, DON'T BID! How hard is that to understand??????

3. ANY buyer and seller too, should know an approximate value of an item up for bids. Some sellers DO price items far too high at the onset... then - and I know this to be true from watching many, THEY GET NO BIDS. However, fierce competition on some items I've seen also has driven the price of an item over it's "new" or current market price. But there again... if the price is over your head or you feel it isn't what you feel it's worth - DON"T BID....

4. When bidding on an item, you should have an idea of it's worth new, used, needing repairs.. Then ask yourself the following questions. Can you afford to risk it if in need of some sort of repairs? Can you afford it whatever it is getting to in price? How bad do you want it? How bad do you need it? Is the sellers profile representing a decent person to deal with? Are there any other items similar up for bids equal to or better that may save you some money?

5. One other thing that gets me, some try to screw you in the terms. You say payment in 10 days. Some I've had to remind to send it. YOU say Money Orders only, they send you a damned check. You say no shipping out of USA, you get someone from another country bidding. It's amazing....Yes, I could give them bad feedback and relist, but I try to be nice. But it just irks me. TERMS ARE TERMS. Or, is it no one can read or has enough common sense anymore?

Luckily for me, 99.9 % of my customers have been nice. It's only been a couple I've had to deal with.......Even if only in questions sent to me on the side asking me to forego the terms.

BUYERS! DO YOUR HOMEWORK... it'll save you a lot of grief. It may not be 100% fool proof, but sure beats shooting from the hip in dealing.

Fortunately for me, I've had no negatives yet, due largely to the fact of being as honest as I can... If it doesn't work I SAY SO.... I give as much detail as I can. The only thing I don't list is that I plain don't know. But even with that, it is amazing how many people do not understand AS IS. Even a local walk in sale went sour - once.. A couple bought a USED computer off me, played with it here for 1 hour before buying. They took it home, 2 weeks later, it fried, though I think THEY helped it as they loved to experiment with computer innards. They wanted a refund. They were told when they bought it, it is AS IS.... They got pissed at me!!!!!!!

There was an ass who bid on some stuff of mine, and like 4 others at same time. He stiffed each of us. We all left negative feedback and I'm sure he was booted from E-Bay.. I know "I" complained. They had a (0) profile and shades. I learned right then and there not to trust all buyers. Unfortunately for newcomers, I will NOT sell to any with a ZERO and SHADES. I'll bump them. I check out the potential bid winners profiles as well, to see if I may anticipate any problems.

Mailing: #1. I shipped out a package Priority mail. It was "supposed to be" 2 days. It took 2 weeks and 2 days. I was able to prove I shipped by sending an E-Mail picture of the receipt. #2. A package coming to me, took over 30 days. The guy had sent it, but didn't have a way to send me proof. Needless to say, until it arrived, I was getting antsy about the deal.... The shipping caused undue frustration. #3 On the last deal, the guy said he sent me a Postal MO on 5/30..... I never got it in a reasonable time. I told him I didn't get it, to trace it after 30 days. Well, the PO wanted more to trace it than it was worth. The guy was starting to say things as though I had cashed it and was hiding it. Words such as "we'll see who's name is on it, when it comes back":. Well, 32 days later, I did get the MO in the mail. True to his word, he bought it on 5/30. The postmark, 2 days before "I" got it. I e-mailed him a photo of the envelope showing the postmark. His package shipped within 24 hours.

MY POINT... BE PREPARED for anything to go wrong in a deal be it E-Bay or any other online deal...It is a 2 way street.. E-BAY or whatever does not and CAN NOT guarantee a successful deal. You are only kidding yourself if you think otherwise......

5457. Ham stores in Miami, USA?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-11-11 04:22:07 UTC
From: Tapio Sokura <oh2kku@iki.fi>
Message-ID: <aqnb9f$15mah$1@midnight.cs.hut.fi>
Source record: 37367

I'm going to Miami, (FL, USA) for a few days next month and thought about doing some ham shopping. I've never been to Miami before and I don't have a clue on ham shops in the area. I know two chains, HRO and AESHAM, and neither has stores in Miami (Orlando is too far away).

So I'm open for suggestions, personal experiences on places where to go and what to avoid are also welcome. I'll be waiting for replies either via this newsgroup or email.

Thanks for giving the heads up. While it is true that it is not the seller's fault, it is good to inform newbees who don't know any better. How about if we take it a step further, and tell people that it is not the killer's fault, when they kill an innocent person who realize that they were going into a bad neighborhood, because they were new to the city?
That doesn't cut it. The reason that I stopped buying from eBay, is because of the proliferation of junk that is being sold, described with endearing terms such as "nice" "mint condition", etc. My choice; other folk's mileage may vary.
On another note.....I have found quite a few honest people on eBay selling good test equipment, but in the last couple of years, it seems that even most of the good test equipment has already been sold.

Pete

5459. Problems with Yeasu MD-100 and ICOM IC-745

Newsgroup: rec.radio.amateur.equipment
Date: 2002-11-11 08:56:30 UTC
From: S57MHA - Alex <mr.alex@email.si>
Message-ID: <chKz9.371$tQ1.45400@news.siol.net>
Source record: 37370

Hello there.

I got used Yeasu MD100 desk mike and it has worked great on Icom IC-736. At home I have Icom IC-745 and I get very bad audio from this mic. I have tried it on another IC-745 and the result was the same. I have played with wires and cut the power from the radio (cca. 8V) in this case the audio is fine but modulation was very quiet and filters on the bottom of the mike don't work.

Has anyone had the same problem or know how to correct the problem?

Any info is welcome and appreciated.

I think its true for anything you buy at auction (or anywhere else for that matter) - do your homework first. One of the potential benefits to the seller at an auction is that people get caught up in the moment, bidding and making quick (uninformed) decisions so you wind up getting more for your item than it is actually worth.

5461. Wanted: one Drake 4-Line knob

Newsgroup: rec.radio.amateur.equipment
Date: 2002-11-11 14:13:52 UTC

Hi!

Don't know about Miami anymore, but there are two stores in Ft. Lauderdale:

Mike's Electronics - Just off Commercial Blvd. East of I-95 about 2 blocks
north on NW 10th on the left.

Eli's Amateur Radio - Just off State Road 84 at SW 9th.

Hope this helps!

These days, I think there are many areas which do not have any walk-in
ham specialty stores.

Between the difficulties of any specialty store in an age of
brick-and-mortar mega-retailers skimming of sales of high volume
products, and the presence of so many mail/phone/Web retailers
specializing in ham radio gear, its actually surprising to have any
walk-in ham stores.

There have been fundamental changes in specialty retailing, not all of
them benefiting customers.

There's always Radio Shack, if you have the time to explain to them
what they are selling you. ;-)

If I am guessing correctly, you are visiting from Europe, and looking
for equipment hard to find (or very pricey) back home. If you know
what you want, you could mail/Web order from HRO or AES and have it
sent to the address you are staying at in Miami.

Happy trails,

The T2H "Sport" model is in the $99 range, normally without batteries. The "non-sport" model is more expensive -- I paid $139 at AES. The V-8 lists at $169 in the AES catalog -- they may have it on special, but I doubt if it's going for $99.

Basically, it pays to shop around.

Have a happy...

I don't know much about Eli's, but I have been very happy with Mikes. Eli's has Yaesu, Mike's has Icom. I know Mike's is closed on Sundays and Saturday afternoons.

Mike is friendly and helpful, unlike AES.

Jeff

I can't give you a definate answer, but it sounds like the same
problem the FT-100D has with that microphone. There is an impedence
mismatch, which won't allow the microphone to work. If you go to
http://groups.yahoo.com/group/FT100 and do a search for "MD-100"
and/or "MD100", you'll find a bunch of messages refering to this
topic.

Apache Owners and rebuilders:

The following Original Heathkit TX-1 Apache parts are currently available:

Audio preamp transformers, $5.00
Chassis control hardware, $8.00
Drum and related assembly, $8.00
Driver band switch, $5.00
Final band switch, $9.00
Final loading condenser, $8.00
Final tuning condenser, $9.00
Front panel complete (glass cracked but easily replaced), $17.00
HV plate transformer, $29.00
HV power supply choke, $ 27.00
Meter switch, $5.00
Meter, $ 8.00
Meter mount with pilot light sockets, $2.00
One pair of good 6146A tubes (tested good), $18.00
Set of the "satinized" knobs (not the chrome plated ones) (1 medium sized is damaged, all others good), $16.00
VFO assembly (less tubes), $8.00
Undamaged cabinet (needs refinishing), $21.00 [Fits Mohawk and other receivers.]
Various pots, switches and other controls, $2.00 ea
6146 tube sockets, $2.00 ea
Final plate choke, $6.00
Driver plate choke, $4.00

Inquire about any minor parts you do not see above.

Email your needs and zip code. Specify Heathkit part number, if you have it.

Above prices do not include shipping. NO out of country shipping is available.

Cheers,

AL

The ICOM radio uses a mic that requires the voltage from the radio to power it. The MD100 does not need that voltage and willnot work properly with the ICOM.

A slight clarification: In the past, a "carbon resistor" meant a carbon
composition resistor, the whole contents of the resistor was the actual
resistive element, and these parts would handle high power spikes and were
essentially non-inductive. These days a "carbon resistor" almost always

means a carbon film resistor, where the resistive element is just the film on the core, and these parts cannot handle high power spikes and have more inductance.

I can believe it as far as the acoustics being the only difference
between the classic and the gold line. I can make a large change in
sound just in the manner I close or open my side and back ports on my
mike. "Audio technica un-direct dynamic" If I want more bass, I open
back ports, etc. Normally, I run my back and side ports totally
closed. My voice has enough bass as it is...Myself, if I were to buy a
heil mike, it would probably be a gold line. They sound pretty good
for rag chewing. They sound "great" on most icoms. Should be good for
a 746. I know a gold line sounds good on a 706mk2g...Beware though,
that you will probably need the "icom" version of the mike, or the
preamp that they sell for icoms. Most icoms need a good bit of drive
compared to other rigs. I have to use a preamp on my 706g, or I only
get about 1/2 drive using my element alone. The HC-5 is mellower
sounding than the HC-4, which is a DX'ers mike.

One of the 1N34 diodes in my MFJ antenna tuner got zapped. Radio Shack has a nice new display for diodes, resistors, capacitors, etc. but the substitution charts are not in yet! Does anyone know the RS substitute for the 1N34? All of their diodes have the nomenclature 1N4004, etc. Any help appreciated.

Source record: 37396

Just look at the description. If it says germanium you can use it. If it says silicon then you can not use it for a sub. The 1N400x series are silicon and will not work in your application.

I looked through the RS online catalog, and they no longer seem to carry any signal diodes at all. If they still carry a crystal set kit, you MAY be able to find one that way. Otherwise, you could order from Allied or MCM Electronics. Unfortunately, most of the mail order electronics outfits have minimum orders. This is fine, if you can find enough other goodies you want for your collection. I may have a 1N34/1N60 that I could send you.

Take care, and stay well.

```
:
: My point was only that I don't buy into the 'Morse as an international
: language' theory. Just yesterday I was listening to a QSO in Spanish, and
: was able to pull out the callsigns, cities, names, etc, and I didn't even
: do any Spanish classes in school. They were using international phonetics
: and Q signals.
:
: 73 de N3KIP
```

How about; "Internationally recognized symbolic communications exchange facilitator". But where does that leave American Sign "Language". What is a language by your definition?
If you can't call International Morse a Language, what is it?
Well... It's a code, but it's usage goes beyond language.
But then, we can't blame the language for a difficulty in comprehension. You claim that you don't buy into;
"...'Morse as an international : language' theory.", then proceed to PROVE the theory while negating your main point.
If we look into the Webster's definition of language, it even includes Programming languages. It is certainly possible to be understood using International Morse by a large community.
Nowhere is it stated that a language can't incorporate other languages nor adopt elements of other languages.

I too think this is a universal problem. People look more at the price tag and buy from the big company than buy from a store where you can feel the equipment before buying, talk with the knowledgeable store owner and have to pay a little more. And some go talk to the small store owner and then order from the mega retailer.

> If I am guessing correctly, you are visiting from Europe, and looking
> for equipment hard to find (or very pricey) back home. If you know
> what you want, you could mail/Web order from HRO or AES and have it
> sent to the address you are staying at in Miami.

Yes, this is one option I'm considering. The prices on your side of the pond seem to be almost half the prices here, so the temptation to bring something back is a big one. Of course possible warranty repairs and rig modification for the European band allocations are things to consider, but if all goes well the saving of over 1000 euros for a typical HF rig is a lot of money.

But at the moment I'm just thinking of my options and haven't really decided on what I want. TS-2000 is something I've been looking at as a 50 MHz & up guy who thinks it's nice to work some HF too every now and then (I currently have an FT-847).

It should still work. You can buy an updated EPROM (with new features)
from MFJ. TAPR has EPROMS which are similar but without a mailbox (and
images for previous versions so you can burn your own).

Unfortunately that is the market you are competing against so it will affect potential buyer's perspective. The buyer doesn't care what you paid. He'll compare it to the current new models. Good luck.

You are NOT buying from eBay. You are going to an auction and bidding on items offered by individual sellers. Some are honest and some are not. Some are knowledgeable and some are not. Any auction has these problems. The solution is to know the worth of the used item and don't get caught up in a bidding war.

Source record: 37317

Let me rephrase things; the reason that I stopped buying, using eBay as a middle entity. Does that sound better? Anyway, nothing I ever bought through that auction was through a "bidding frenzy". Some of the stuff was as represented, but other stuff was misrepresented. It was inoperable equipment that was represented in good working order. I don't mind a "handyman's special", if the item is represented that way, but I need to know that up front.
On another note.....a friend of mine won an auction for a microscope. He paid out 3000 dollars, and never received the item. He did file a complaint with eBay, and eBay did nothing about it. Eventually, the FBI got involved, but they never caught the fellow. I turned out that supposedly, somebody stole this person's eBay ID, and ripped off many people.
A big problem; you don't know who you are dealing with, even if the person has good feedback. What good is it, if people can steal ID's and eBay either doesn't have the wherewithall or they don't care enough to do anything about it.
No thanks; I like to deal with people face to face.....been burned too many times on eBay.

Pete

Hey gang....I see there are a several ADI 147's on Ebay and
reading the description they both have the same problems
(display fades out etc) and I was wondering if this is a common
problem with these, and also is it an easy fix (connections)
or something worse? Anyone have any experiences with
this radio?

When you get to Florida, you may want to check and see if there is a state sales tax. (Here in Texas, the state sales tax is 8.25%) If there is a state tax, you can eliminate the tax by buying by mail from a ham dealer who has no business presence in Florida. Just get on the internet and shop around, and look for the best price, and make a few phone calls.

E-BAY has NOTHING to do with the honesty or sincerity of the seller. They merely offer a service. Like Your newspaper does when they print a FOR SALE AD for YOU. YOU (the seller) put the ad there, not the paper (E-Bay in this instance). I don't understand WHY that is so hard for some to figure out... IF YOU CAN'T AFFORD TO LOSE, DON'T BID (BUY).....NO ONE IS FORCING YOU TOO. THERE IS NO GUN TO YOUR HEAD..... There are unscrupulous buyers too. I pointed that out in my last post on this issue. Myself and about 4 other people got screwed out of about $800 worth of items up for bids. A guy bid and outbid to top others only to NOT pay for them. WE all had to relist, and to some of us, it isn't the fee - they are credited to you by E-Bay if proper steps are taken. It is the TIME. I don't have TIME to play stupid games.

IF those who THINK they are/were so easily taken ARE, I have a few billion stars I'd like to sell the deeds to.....$1000.00 cash each.... Get them while they're hot....

Well, I have a problem with my ADI 146, which uses the same display (I
think) as the 147.
The problem is that the connector pins on the display seem to oxide.
Now, I haven't fixed mine, just removed it and inserted it again.
It would seem appropriate to use some sort of cleaner (tuner cleaner did not
work) like the guys use on old tube rigs.
I am open to this if someone can tell me what to use. I think it is called
deoxide or something similar to that.

You might try noalox which is availiable at electrical supply houses and possibly Lowes or Home Depot, but as this is basically the same problem as the Kenwood TM-241 radio had your best bet is to hardwire the two boards with a short length of multi-conductor cable. Bob N4BK

Ah the mining is going to be in Cornwall, which is 150 miles from me. I guess our local news is a bit too local!. It hasn't been on the national news either here.

Thanks for the info.

I consider these ecowackos terrorists. Remember those forest fires a few
months back out west? Why was that? Because those green wackos wouldn't
let anyone clean out the underbrush. And if ANY sort of clearing was to be
done to help break up fires they took em to court.

Got no use for them at all.

Dan/W4NTI

From: Gary <garytaylor605@yahoo.com>
Message-ID: <FgaA9.884$Ta6.84893@newsread2.prod.itd.earthlink.net>
Source record: 37339

I have two Pro-46 scanners with the same problem. They have very poor reception, especially in the 800MHz range. Does anyone know if RS will still repair this model? Is there somewhere else I can get them repaired?

Any help would be appreciated.

Thanks,
Gary

In article <tbstsukd6h5d2dpsrgqkubf8aff1nqtr0u@4ax.com>, none@nonya.com says...
>
>Hello All. For those looking at the Icom IC T2H, and/or Icom IC-V8
>2m HTs. Beware of ebay sellers trying to sell these radios for
>inflated prices! AES and HRO sell these radios for $99.95, and right
>now you get a FREE nicad pack. These are good radios, just a head up
>for the buyer to beware of ripof artists!

I understand your concern but it is an auction after all. Think of it as a regular auction where people gather together and bid in person. The auctioneer describes the merchandise and it's usually available for viewing prior to the bidding. I've never been to an auction where the seller gives a value to the auctioned item other than a minimum bid amount. The whole idea of an auction is to sell to the highest bidder and to drive the price up as high as bidders are willing to go. It is the bidders responsibility to know what they are bidding on and what it is worth.

Again, I understand your concern and your heart is certainly in the right place. Maybe the answer is that ebay or other auction services aren't the right place for newbies to be acquiring equipment. Ideally, a newbie could find an experienced ham to come along side and provide some wisdom when it comes to buying gear. I realize this isn't possible in all situations though.

Unfortunately, there will always be some who a too naive to know they are getting in over their heads.

>work) like the guys use on old tube rigs.
>I am open to this if someone can tell me what to use. I think it is called
>deoxide or something similar to that.

You're probably referring to De-Ox-It, a product from CAIG Labs. It's
a cleaner, oxide remover, and contact-surface protector... the
successor to the older Cramolin products. It's good stuff to have
around... I've used it for years on stereo equipment connectors,
flashlights, etc.

You can buy it in an aerosol form, or in an applicator "pen". Here in
the Silicon Valley, Fry's carries it. It's also available from many
of the big mail-order electronics and stereo-supply distributors.

I have a VX5R, the unit is about 1 yr old. Its overall condition is very good. Keypad and numbers in great shape. It has one slight problem, the SMA connector in the radio keeps working loose. The antenna stays on, but the antenna moves around even when its screwed onto the radio. Other than that, it works great, on TX & RX.
It has the freeband mod done and works great.
First $175.00 takes it. Plus $5.00 Priority Mail shipping.
Insurance is extra.
Please email RW613@lycos.com

5539. FS: Heatkit HD-1250

Your never know he may get lucky. There has been plenty of other ham &
non-ham, stuff going for twice a much as its worth, especially when you get
3 or 4 bidders that get carried away. I've seen Yaesu VX5s and FT817s going
for more than the new price.

Mind he is asking a lot, especially when he sounds like he knows nothing
about the TS430S, a one line description (he dont even say if it works), no
picture, zero feedback, and the very high reserve price. I guess he's new to
Ebay..

Ain't it the truth! Last weekend I bought 2 brand new 10/100 PCI NICs with
Wake-On-LAN (with the WOL cable!) at Fry's for $1.99 each! No rebate
needed, though there was a limit of 2. Now THERE'S something worth $5!

10Base-T cards? I thought there was a disposal fee required for each one
like your old tires.

Hi Frank,
You are talking about De-Oxit, from Caig. Another good
product from them is Pro Gold. They are around 12 dollars and 17 dollars a
can, respectively. When the HP techs would check out the test equipment at
Motorola, they would use De-Oxit to clean the switches and controls.

He had dealt with the person that had this ID in the past, to the point of actually driving out to Naperville, Illinois and visiting this person. He had good past dealings with this person, but apparently, some fellow in Europe had stolen his ID. The best thing that eBay could have done would be to kill that ID, but who knows.....it seems that the real owner of that ID is still using it for his eBay sales.

Hank:

Most ham HF transceivers have substantial attenuation when tuned to
any frequency below 1600Khz. Apparently this is to protect the receiver
front end from possible strong local signals on the BCB.

I guess this is proved on the Yaesu FT817.

This is the quoted AM sensitivity from Yaesu:-

100 kHz-500 kHz not quoted
500 kHz-1.8 MHz 32 µV
1.8 MHz-28 MHz 2 µV

Although an FT817 tunes down to 100kHz its sensitivity rapidly rolls of at
about 600kHz. I can only just hear 'Radio 4', which is a very strong Long
Wave station round here on 198 kHz.

The same seams apply to most modern ham transceivers that I have used.

I bought a Kenwood 733 Mobile years ago, and I remember it had a problem with the microphone PTT button going out. I had search before on deja and I found an article that had the appropriate part number from Digikey or someone in the article. I cannot seem to find it now, would anyone know of what the replacement part might be, or if someone could help me find it in a catalog. I'd like to get the dust off of it and start getting back into it, since i'm in a different area.

Any help would be appreciated..

From: Charles Hugg <chashugg@earthlink.net>
Message-ID: <iduA9.2568$Bh1.253499@newsread1.prod.itd.earthlink.net>
Source record: 37284

I have for sale a CTE International Solid State Mobile HF Power Amplifier, Model 757. It has a switch for AM/FM and SSB/CW and a switch for Class AB or Class C. I have used it on 40, 20, 17, and 10 meters. I get 100 watts output with 5 watts input. However, this amp has some problems. I get reports of distortion and noise on the signal. This would be a good project for a technical person, which I am not. I don't have the manual. You can see an amp similar to this one on the CTE WebPage at:
http://www.alan-uk.com/amps/amp_2.htm#s07009
The Model 777 looks almost identical to the Model 757, but the 777 runs more power.
I am asking $55 plus shipping from 79602. Thanks, Charlie Hugg, K5MBX

Hi Guys,

I am looking for an article in Ham Radio Magazine, March 1968.
The article is "Modifing the Yaesu FT-310 for 30 Meters"
I would be interested in the issue or a copy of the article.

Thank you very much,

WA4MNT

On a good evening, which is far from being every night, I can hear Radio 4 on 198 kHz with an 18 foot whip on my R-5000, HF-150, TS-450 and TS-570; a long wire is even better - it is not comfortable armchair copy, but it is often readable. Some other longwave stations even further away are much easier catches. I'm much further away that you are at 45N 75W. When I visit the East Coast of North America the signals are noticeably stronger and I can even listen to it on my DX-398 with a few feet of wire thrown into a tree.

A friend of mine who spent some time on an island in the Gulf of St. Lawrence last summer was able to hear it, and many other European LW stations, around the clock with a wire lying on the beach.

The FT817 must be really rolled off.

Dave

It must be, which is why Yaesu dont quote a sensitivity below 500kHz. Below 200kHz the 817 is almost silent, virtually no background noise. I guess its sensitivity at 200 kHz or so is probably 1 VOLT!

Radio 4 round here is quite strong, I can hear it quite loud on a crystal set with 1 meter of wire as an antenna.

In Southern California, it hasn't come to that yet. There's still plenty of older, ISA-bus based computers in operation.... However, I admit that the $5.00 price is a bit old - as of the last time I bought any. They may have fallen to $1.00 each by now, but aren't completely worthless. Most NE2000 and other cards are worthless, but for some reason, the 3COM's are preferred.

Hey Folks... Say, any hams on the newsgroup that also sail??
I am not into it, but a friend querried me on the subject of receiving
weather Fax while
sailing. I told him I no little about it, but would look into it.
How is it done, and what kind of equipment is required?
I told him it was either wide-band FM aroun 136 Mhz direct off a satellite,
or
land based wefax info off the hf bands.
Can anyone set me straight on the subject?
I sure could use some enlightenment.
Regards....Dave KD2E

I have 4 of these Microphones for sale. New, they have never been used but I do
not have the boxes for them. Will sell them for $75ea. This Web Site has the information on these Microphones:

http://www.shure.com/microphones/models/522.asp

If interested Email me at k5ofy@arrl.net

---

522 Desktop Microphone, Cardioid Dynamic, High or Low Impedance, Noise Cancelling, Push-to-Talk Switch $143.52 New.

522 Desktop Microphone, Cardioid Dynamic, Tailored Response, 40 Hz to 10 kHz

The Model 522 is a dynamic base station microphone designed especially for radio communications, paging, and dispatching systems. Its cardioid (unidirectional) pickup pattern suppresses unwanted background noise -- the type of noise generated by other dispatchers working nearby, by ventilating equipment, or by office machines in the same area. It also eliminates or reduces feedback in public address paging applications.

Features:
Dual impedance(19 to 300 ohms or High)
Impedance change switch for convenient change-over
Finger-tip control bar (locking or non-locking action) to actuate
microphone circuit and an external relay or control circuit
Long-life switch to satisfy rigorous requirements of communications and
paging systems
Sturdy, high impact ARMO-DUR® base and microphone case
Adjustable microphone height
Dependability -- under all operating conditions

5601. 4CX250 Mod for FT101?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-11-14 08:05:01 UTC
From: Dave Bullock <DaveB@ihr.mrc.ac.uk>
Message-ID: <3DD3592D.3040007@ihr.mrc.ac.uk>
Source record: 37211

Homebrewers, here's a good question.....

The FT-101 "probably the most modified Ham bands radio ever"
or so the saying goes.
The 6JS6C probably the most sought after tube for this radio!
I have seen lots of modification info to convert to 6146B's etc
but I would have thought that another of the radio classics..... the
4CX150 or (250) would have been a more suitabe choice.

Readily available, (10-a-penny) at junk sales, even ones that are tired
of UHF would probably work on DC ......sorry HF)!
Unbreakable, (in this application) only being asked to produce 100W they
can dissipate 250W!
Junking all thet parallel wiring would probably remove the need for
neutralisation too!

As the new owner of an FT-101 in need of O/P bottles, do any of you know
what is the problem, converting the set to a single 4CX250?
(There must be something I missed)!

Thanks ...Dave

Canyon,
I have the complete set of Ham Radio on CDs and do not see an
article with this title in any issue. Also, I don't think we had 30
meters back in 1968. Did you mean QST or perhaps 73 and a different
year?

The screen voltage is critical in AB1, AB2 configuration. They are easly
overdriven and prone to flat topping.

I base this on experience (mostly bad) with them at 144mhz years ago.

5621. HF recieving antenna recommendations for Kenwood TH-F6A

Newsgroup: rec.radio.amateur.equipment
Date: 2002-11-14 20:28:19 UTC
From: axinar@one.net
Message-ID: <c45d35a2.0211141228.6db3c6f7@posting.google.com>
Source record: 37231

Say ... does anyone have any suggestions for a recieving antenna for the Kenwood TH-F6A?

Despite the various reviews, the reciever is not all that bad ... I have had pretty decent results on HF recieve with the Miracle Whip antenna.

In fact I often get better signal strength (not to mention quality) with the TH-F6A / Miracle Whip stack than I get with the Sony 2010 with it's built-in Whip.

Of course that right angle connector on the Miracle Whip was built for a Yaesu FT-817 and, all in all, the PHYSICAL configuration is an accident waiting to happen (there is so much leverage from the antenna that one false move and the RADIO may go flying across the room) ... then there's the issue of the adapter at that angle.

Anyone have any recommendations on good recieve antennas for the TH-F6A?

Thanks!

Ax

5622. ALERT!! Never donate your old gear because.....

Like every other non profit organization in this country for cars, houses, radio gear & who knows what other stuff, it gets lost or never ever does any good to the few that need help or gear.
They get sold on Ebay, QTH.com, Eham, etc!
Money goes in the pocket of the scan-running non profit org.
Here is how you can help>>
Sell it your self then actually find a youngster in your own area could could use the money for newer gear or just give the youngsters the gear instead of selling.
Why make some sweet talking scam artist collect enough money to buy new cars, etc!
Ask me how I know?
I donated a bunch of gear, only to see WB2JKJ from Radio Club of JHS 22, sell it on QRZ.com, Eham & QTH.com.
When I asked him, I never got any reply, Duh!
I could have done that!!!!!!!!!!
Be Smart, Don't donate ZIPPO!
Brian

Original factory installed filters used the nuts to keep the filter in place during assembly. I seem to remember the FL-52A was an original equipment factory installed filter and it is likely attached using the nuts on the bottom of the filter. This means you will need to lift the main unit to remove the filter.

The FL-52A came with nuts that were on the mounting studs. As an aftermarket filter, the user was supposed to remove the nuts, slip the FL-52A into the clip and throw away the nuts. Some however did lift the main unit and install the nuts to hold the filter in place. I wonder if you might have done that if you installed the filter ?

Hi Murray!

The original TS-700A did not have that capability as it was designed before the "new" repeater sub-band on 144-145 MHz. There was a kit I recall that allowed the shift in that portion of the band. I think it was called an RSK-700 or something like that. It had some components that would allow the shift.

Hope this helps.

Will Rogers

I have been considering a TH-F6A but backed off for the moment after reading a couple of European user reviews that the sensitivity on the 225-400MHz aviation band is almost non-existant. I tend to listen there quite a bit so it is a significant matter to me - I am curious if it is just the European version since the band structure differs so it might be just that version.

As to the HF antenna. I faced a similar problem with my DX-398 where connecting an external antenna directly looked like it might end up causing physical damage. I decided to make a short co-ax patch cord with RG-174 and a BNC connector on the end - this gave me a system with no stress on the receiver and allowed me to connect to various antennas. Actually I made two of them, one about a foot long and one about 10 feet long which allowed me to connect to an outdoor antenna when away from home. I complemented this with a minibox with a BNC connector and two insulated binding posts at opposite ends. This has permitted me to put up a simple dipole, or, with a short length of wire with a large bulldog clip on one end, to set up a simple random wire and ground the other side. One last touch was to install a screw eye on the minbox opposite

the BNC connector so I could hang the box/centre insulator from some convenient object.

Don't know if the idea is useful to you but it has worked very well for me and I'll use it with the TH-F6A, or whatever competitor I end up with. Might even try it with a portable HF transceiver if I get around to purchasing one.

Unfortunately, the TS-450 is discontinued, and I doubt you'll find any sellers (AES, HRO) of accessories specifically made for that radio unless they also fit the newer radios as well.

The service manual lists several options and accessories, such as an external power supply with loudspeaker, a TXCO reference oscillator, a DC power cord, an external speaker, a voice synthesizer, six IF filters, and a tone encoder board. I can copy the appropriate pages and mail them to you if your address is correct on qrz.com. Let us know.

In certain situations, the high IF filters reduce strong overloading signals better than the low IF filters. I have a couple of each in my radio. The low IF filters seem to have a much more noticeable effect when turned on singly.

Hi Murray,
Unless his rig had the upgrade kit installed, it won't
work in repeater mode below 146MHz. There was an upgrade kit available,
consisting of a small PC board, and a couple of offset crystals. I did that
to a 700 that I had several years ago. Right now, I have a TS700SP; this
model comes out of the box with the offset mode across the whole tuning
range.

I know that QST es others charges much less to non-profit orgs then regular businesses.
Of course they have to sell the donations or have a Warehouse to store it all.
My question is wat does he do with the money besides spend it on ads & cars.
Money for upkeep? What upkeep? he uses the NYC school systems electricity & room for the station.
Matter of fact, before yopu can put a commercial ad in QST, they want to see the item or service before allowing such.
Why not check his organization out? Because they might lose revenue!
What to see his ads on ebay? Try a search for joeee1621@aol.com or wb2jkj@aol.com or ccccqqqqq@aol.com, he'll pop up for all to see whats donated.
It might amaze you.
Keep up the word!

5641. Cheap or self made Aerial for a TV/Radio card

Newsgroup: rec.radio.amateur.equipment

Hello

I have a Hauppage WinTV Go! card which is kind of great (I say kind of because I have a real TV in the study so I don't really have a use for a TV card at all, but that's bundles for you) and I want to put the Radio capabilities of it to good use.

So, does anyone know where I can buy a cheap FM aerial for it (I mean less that £10) or advise how I can make one up?

It doesn't have to be great quality since it won't be long before I get my hi-fi up and running anyway thus making the card and aerial redundant anyway...

All advice gratefully received.

JJ (UK)

I imagine it changes every day, and the less you pay, the less you can expect in the way of service if there's a problem. Try the web sites for AES, HRO, Burghardt, and for lowest price, possibly Texas Towers.

(The extra $10 you save from some lowballer may not be worth it, if you have problems.)

Near as I can tell the reciever is fine ... on par with my Sony 2010
... at least on HF ...

2m and 440 it is quite comprable to any other HT I have ever had.

The problem seems to be with the ANTENNA on HF ... you have to hook up
something more "serious". The Miracle Whip does the job but it's a
physical
accident waiting to happen.

I've just had a look at the spec for a WinTV Go card and it says it does not
receive FM. See:

http://www.microdirect.co.uk/default2.asp

and look under video cards then look at the information on the WinTV Go
card.

I'm gearing up to purchase a replacement base HF rig (had to sell my TS950SDX a few years back)and was looking at the TS870S.

The 870 does not appear on the Kenwood Amateur Radio Products page anymore and I was wondering if Kenwood was in the works with a new 870 replacement rig and if so has anybony heard any news.

I'd hate to think Kenwood would only have the TS2000 as it's mainstay base HF rig (I really don't like it all.).

When I called Kenwood in California they won't say eitherway.

Thanks,

Steve (W1SMC)

I wish I had the money or the need to buy it, anyone reading this.....

I own an 821H with the UT844 for tone scan, what a great rig,
it can be modified to crossband repeat and has great sensitivity
along with great spurious signal rejection, a hard balance.

I have for sale an as new FT-817 all mode portable transceiver. This radio is a QRP 5 watt HF/50/144 and 430MHz multimode transceiver. I bough this radio and all of the included options new in August of this year. I am a non smoker. This equipment has only been powered up for no more than 1 hour. I have all of the boxes, paperwork with warranty cards and all standard included accessories including the hand microphone. All equipment is absolutely flawless and has only been set up in the family room of my home. I would like to sell this as a system package. The package I am offering consists of the following:

Yaesu Ft-817 serial # 1K440086
W4RT 1 Touch Tune Option. This enables you to auto tune with the LDG Z11 while you are in the SSB mode.
Collins 2.5 KHz SSB Mechanical Filter
Astron RS5A Power Supply with 3 socket cigarette plug module installed
LDG Z11 Automatic Antenna Tuner. Covers 1.8-30 MHz
Joey Outbacker Antenna. This antenna covers HF/VHF range from 80 thru 2M, including 30, 17 and 12 meter
Alpha Delta Micro Mount for the Joey
Maha FNB-72 1700mAh NiMH Battery
W4RT 817 Mini Pack-It Reference Manual 2nd Edition
Laminated color 8 &#65533; X 11 Quick Reference Chart for operation of the FT-817
Yaesu NC-72B Battery Charger
12 ft Mini 8U Coax Jumper with silver PL-259's to go from the LDG Z11 Tuner to the Joey Antenna
1ft Mini 8U Coax Jumper with silver PL-259's to go from the LDG Z11 Tuner to the FT-817

If you are seriously interested I can take digital pictures of part or all equipment as requested.
I have over $1,400 invested in this system
I am asking $1,000 shipped CONUS ground UPS to your door.

I've had a 870 which I think is a very good radio. I have replaced it
with a TS-2000. I think the TS-2000 has a better DSP implementation
than the 870. The 870 I think has better hi-fi audio, if thats what
you're after. The 2K is very close however with received bandwidth from
0 to 5000 hz compared to the 870 0-6000 hz.

The TS-2000 also has many other capabilities over and above the 870.
VHF all modes, UHF all modes, 1.2 g. all modes (optional).

A super radio. 870 a super radio too.

dj

Yes, many of them are.

Use the search engine on the RS site, and try the model both with and
without a dash (HT123 and HT-123).

5666. Re: ALERT!! Never donate your old gear because.....

Newsgroup: rec.radio.amateur.equipment
Date: 2002-11-16 00:42:35 UTC
From: "Joe S." <joe@schlatter.org>
Message-ID: <ar447k0213s@enews2.newsguy.com>
Source record: 37127

This is not exactly in response to your post -- but -- I retired from the Army in 1995 and in 1996 became the executive director of a non-profit working to repair and build houses for very low income families in central Appalachia -- 20 or so counties of S WV, SW VA, NE TN, and SE KY. I left the job in late 2000, but, in the meantime I got a real education in how non-profits operate.

Most non-profit organizations are solid. They pay low salaries, demand enormous amounts of work and dedication, and tend to burn people out. And they can always use volunteers and donations.

The business of donating used vehicles to non-profits, however, is not exactly what it appears to be. Most of the non-profits I know of that solicit used cars sell them. And what really rips me is that many of them use an agent to sell the car -- you donate your used car to a non-profit; a representative of the non-profit, who is really working for the agent, picks up the car and gives you a receipt for your tax purposes; the agent then sells the used car, keeps a portion, and gives some to the non-profit. And most of those that I know about give more to the agent than to the non-profit.

Now, if any of you folks out there, especially who live in or near the area I described, have a vehicle, especially a used 4-wheel-drive pickup, a standard pickup, or a big ol' van that you want to donate, visit the web site of the Appalachia Service Project: www.asphome.org

If you donate a vehicle to them, they will use it -- for construction work, for staff vehicles, or for spare parts to keep the rest of the fleet running. When the vehicle is completely worn out, they'll sell it for scrap. Every single vehicle in the 120-plus fleet is donated, except for the 18-wheeler tractor that we had to buy a few years ago. ASP does good work and is a solid organization.

Hello, I have a mint Kenwood TS790A 144/440 All Mode Satellite Radio for sale. This radio has a problem. The S meter light and the SUB display is is out. The main display works fine on 144 or 440 and the receiver works great and the transmitter has full output on both bands. I am putting a $500 price on this shipped for someone that has the time to fix it. It comes with manual, mic and power cord and you can't tell it from a new one physicaly. Please email me with any questions or a request for a picture. Thanks, Mike N0XD mfunaro@worldnet.att.net

This is a great deal for somebody needing a good 2/440 (and optional 1.2 gig) all mode rig, the sub display fix is likely only two easily replaced "grain of wheat" lamps, likewise for the "S" meter light. $2.00 worth of parts and about 5 minutes to fix.

(The sub-band display is a backlit lcd display that will go dark if the bulbs burn out - the main band display is fluorescent - a whole different animal).

OK. I copied the appropriate pages from my service manual and will send them out either Saturday or Monday depending on when it stops raining out here.

Very nice rig. Unfortunately they don't have much resale value in today's market, and it's hard to find something that works as well and has all the features. As much as I'd like a 756PRO or equivalent, I'm stuck with the TS450 for a while.

Where is it available? I just got an HRO catalog last week and it and Icom's web site still say the unit is not for sale, nor can it be offered for sale, until FCC approval is received, which I assume has not happened.

And what's the selling price? It's gonna have to compete with the Yaesu 8900 if they plan to sell any of them.

5687. Kenwood tm-261a 2m mobile memories query

Newsgroup: rec.radio.amateur.equipment
Date: 2002-11-16 19:09:48 UTC
From: 0junk4me@bellsouth.net
Message-ID: <0KwB9.12682$dr6.5290@news.bellsouth.net>
Source record: 37149

HI folks,

Just bought my xyl one of these rigs at a hamfest a couple of weeks ago. Brand new in the box this time. Been perusing the manual carefully but can't see what it is we're missing.

THe problem: wE can seem to program a memory but it doesn't seem to save the ctcss tone encode information. THe book doesn't actually tell us what we're missing here.

Another question. since one must set the ctcss tone through its menu a is one able to program more than one ctcss encode tone in memories? WIth as many memories as this rig has it's sure going to be a bear to ahve to go into this menu while moving down the road when needing to switch tones.

AT the moment just moving the vfo around among repeaters in the area which all seem to use the same tone, but would sure like to make use of the memory channels <grin>.

Anyone with a clue as to what we're both missing?

Thanks and 73

Tone frequency and CTCSS frequency and status (enabled/disabled) is stored into memory when you store the freq into a channel.

besure you have the T and the CTCSS indicators on the LCD when you store the freq into memory.

And also be aware that you cant use CTCSS until you install the optional TSU8 CTCSS board.

the Tone encode is built in, not the decode.

The table on page 24 of the manual, clearly shows what information is stored in memory when you store a channel.

and it works! (unless there is somethig wrong with it) -- so play with it until you get it right.

cheers

MAKE ONE out of300 ohm twinlead.Strip insulation off ont end to reveal paired conductors....solder 'em together.....go about 3-4 feet down and do it again to the other end.

Half way between the ends on your 3-4 ' twin-lead, open up the insulation on ONE of the conductors, split it and solder the exposed conductors to a lead in wire made of (guess what?) 300 ohm twin lead. Staple the twin lead to the wall and hook up the lead-in to yer set

Yodar in orlando

Just trying to encode ctcss, not decode. WAs pretty sure I had the t
and ctcss lit, but hoping it's not because I don't have the decode
board. Have no reason for it.

My xyl has to do the reading, old blind man can't see the print in the
manual, but will have her check out that table on page 24.

Yes, HRO has them -- got them in earlier in the week. The mounting
bracket for the head is incredibly cheezy. Your choice of green or
amber backlighing on the display. An interesting feature is the
ability to change the first IF. No block diagram in the manual.
Unlike the Y8900, the programming software is available for the 2720
now (HRO also has it). www.eham.com has some reviews, but so far, no
word on mods and extended tx coverage.

No alpha tags either --- I don't like that -- got used to them.

And the memories keep 2meter/70cm in one lot -- no band changes. Different,
think i'll like that better, easier to put towns in a bank, regardless of
band.

remote it with a standard rj-6 mic with a rj-11 (8pin) -- mic control can
do everything including volume up.down.

rx is wide open, but i want to open up the tx before mounting in truck.

go buy one -- if you don't mind the no alpha -- seems to be a top notch
radio.

I like the dual controls -- left right volume/squelch/tune -- no fussing
around with selecting "main" etc.
like two radios in one -- you do have to select which you are going to xmit
on though.

first radio i have owned that tunes the 220 meg band.

overall pretty nice.

After you have set the tone in the menu programming. and exited the menu.
Press the T (for tone) on every channel you want set. button. I needed to be
shown that by the slesman at the candy store 2 weeks after I bought the
radios.

Morse is simply a way of encoding the signal for transmission just like ascii, baudot, or PSK31. It is not a "language". If it were then any two people who knew Morse could efficiently communicate but you can't. In many cases you can copy the characters but you don't understand the words they spell. Hams often can get the idea of the content because things like call signs and operational signals are relatively standard - not because Morse is a universal language. The same is true for ascii, baudot, and PSK31.

The subject pretty much says it all. The radio is in VERY good condition (pic.'s available on request) as is the owners manual, although it has some marks on it.

I must add that I have not powered this up so I cannot attest to how well it works (unless the way it looks is any indication).

I REALLY don't want to put this on Ebay, so first come first serve!

$125.00 + shipping (OBO)

Thanks for the comments. I don't have enough items in my Kenwood HT to even use the alpha tags. That rig has 80 memory channels that are used for both VHF and UHF - it's up to the owner to decide which ones will be VHF (I chose 1 thru 40) and UHF (41 thru 80).

My Standard C5608DA has separate controls for each band - it's basically two radios with one control head. Has a horrible time with intermod from the local pagers. I read one review on eHam that mentioned lots of VHF intermod. I did try out a Yaesu 8900 and it had absolutely no intermod and seemed to fit a lot of places in my vehicles.

One bad thing about the 8900 is that you must be level with, or "above" the axis of the front panel to view the LCDs, otherwise they disappear. This precludes mounting the control head overhead, or vertical on the transmission hump.

Does the 2720 give you both amber and green, or do you select it when you buy the particular model? The 8900 is a very readable amber, when you can see it, and ALL the digits are the same size. It does do alpha-numeric tags. One downside to the 8900 is that it only gives you 28-29.7 and 50-54 MHz receive below 108 MHz. Why they couldn't have left it open from 28 thru 500 is beyond me, but that's Yaesu for you.

You can choose either amber or green in one of the setup menus (the
folks at HRO hadn't seen that yet -- I borrowed the book and worked my
way through the demo they'd just set up).

The 2720 display is quite nice -- I can read it without my reading
glasses, and it's readable from below the display. I have the control
heads for the 706 and the 8100 overhead on the ceiling console on my
grand cherokee. I even checked the 2720 display with my polarized
sunglasses -- it's readable. Yaesu on the 8100 set the polarization of
the LCD so that it's almost completely dark when viewed through my
sunglasses.

If Yaesu had opened up 42-49 MHz (or someone publishes a mod that opens
it up for RX) I'd get the 8900, in spite of the fact I already have 10
and 6 covered with the 706.

GRUNDIG YACHT BOY 400PE
With Mute and Fine Tune Mod!!!, Manual, Original box, carrying case, Wall Adapter, long-wire external antenna,
Hardly used! -$105.00

BELTEK 23 CHANNEL AM TRANSCEIVER
This one's an oldie, looks like a mid seventies transceiver, couldn't find anything on the web about it. It measures about
12x10x4 in an all metal cabinet, it has a 120v ac as well as connections for 12v mobile. This is a solid state transceiver
and it works. -$15.00

I'm located in SW Ontario, shipping to anywhere in North America is about 8-12 dollars for these items.

Regards.

5732. Fixing Old Heathkit HW101

Newsgroup: rec.radio.amateur.equipment

Hi Group,
I just got back on the air after over thirty years, I have aquired a Heath HW 101 and need some help fixing the VOX. All other features seem ok, When I tap the mike the relays click, but do not latch (hold) If I speak into the mike I can hear my voice slightly in the speaker and the relay coils vibrate too.I have tried the adjustments with no changes noted. Tubes are ok. I do have the manual. Grateful for any ideas. If there is a better newsgroup for this, please advise.

Anyone have one of these radios and have a tone that comes up when you hit the ptt to transmit?When you press to talk it send out some tone like a DTMF tone and I can't figure how to shut it off.I have called HRO and no one knows what I am talking about.They tell me to do a full reset and that should take care of it.IT Don't.
Right out of box as soon as you put in a frequency it does it.It stays in with as many frequencys you load.I can go to any channel and key up and you would know who it is if you are aware of it.Any help is welcomed.

I had an 8900 here for a day or two, it is the internet button causing
that. Look in the book for the location of the internet button and
toggle it off, It should be somwhere right on the front panel.

5751. Kenwood TS-140S problem

Newsgroup: rec.radio.amateur.equipment
Date: 2002-11-18 15:37:30 UTC
From: rod_pruner@yahoo.com
Message-ID: <90411613.0211180737.72b05195@posting.google.com>
Source record: 37013

After over 10 years of flawless operation,
my TS-140S has developed a problem.

The symptoms are this:
1.) Very low receive signal level. Must turn AF and RF gain
to full on position to hear even background noise. S-meter
does not register a signal even on ones that can be heard at the
low level. CW side tone and audible mode indications are normal volume.

2.) TX will not key in any mode: SSB, CW, AM or FM. No response
from the PTT button on mic (in LSB, USB or AM/FM), SEND/RECEIVE
button on front panel or in CW mode using a key.

Inspected inside covers for loose connectors, found none.
Nothing smells burnt or over heated. No visable signs of damage.

Any help/suggestions are appreciated.

TNX es 73's,
Rod, KN3ZOG

"For amateur radio use only" Yea right, wink wink, nudge nudge!

Also notice in the location it says "ASK SELLER NOT SUPPORTED"
And he also has a "hidden" feedback. I wouldn't buy anything from
this guy! Unless you like spending your hard earned money on junk
from someone who won't take emailed questions and wants to hide
his real feedbacks, for reasons known only to him.

Do you doubt that the FCC prohibits the use of this amp
on class D CB radios?

Why don't you file a complaint with ebay on all these "finds"
and do some real good! I've seen several of the "10 Meter Ham"
radios pulled in the last few days, by people sending in complaints.

Hi Dick
You have the DTMF Paging turned on. Go to the menu and turn it off. It's in the manual.
All modern Yaesu units have this feature, look under DTMF Paging Code.
If the word PAGE appears on your screen? Make it go off. 73 Chris VE3NGW/W4 Florida

Incorrect. At slow speeds what you say is basically true. You copy the letters, then look at it either on the paper or in your minds eye and determine what was sent.

At speeds over about 35 wpm you copy in groups. You do not copy only the characters. The faster you go the less 'translation' is required. At speeds over 50 wpm you copy words and sentences. At this point it becomes the language we are refering to.

Dan/W4NTI

Morse Code is not a language, it is an encoding system for the alphabet,
numerals, punctuation, etc.

The LANGUAGE is (or at least was) called RADIOESE.

Lou, how does one achieve a higher rating than "0" unless they make a purchase? The new people on ebay have to start with buying or selling from someone, just like "U" did when you where new. I like giving a person the benefit of the doubt, the majority of people who buy and sell on ANY auction site are honest and just want to either make their sale or purchase.

Lou wrote:

> E-Bay pet peeves, situations experienced for me to learn from buying and

Why don't I file a complaint with eBay? You mean I can do that? I have
searched and searched the eBay site for a contact e-mail -- where is it?

Message-ID: <utj53psaaphl71@corp.supernews.com>
Source record: 37030

At higher speeds even though you copy complete words or even sentences, your understanding is still based upon the language (English, etc) that you speak therefore Morse is itself still a way of encoding rather than a language. Someone who does not understand a word of English would have an impossible time trying to communicate with you via Morse. As I said before, hams can often get enough communications across to count it as a contact only because the call signs, Q signals, etc. are rather universal among radio operators - not because Morse is a "universal language". If Morse were such a language, two people could communicate with 100% understanding without either of them knowing a single word of any other language.

> At speeds over 50 wpm you copy words and sentences.

Yup, and those "words" or "sentences" are English, German, French or some other language. Without some other language, Morse contains no meaning at all therefore it cannot be a language in and of itself. It is only a way of encoding some language.

So far I like the radio and its performance.It does surprise me that you can
get a nice package for less than a Tri band.I can't wait to get the ADMS
software as soon as it comes out.

On the Icom H-16 there was a diode on the early versions that needed to be cut and a small jumper on the later versions that needed to be pulled off. Both were on the logic board which is on the backside of the front panel. You might look for either of those.

Since Icom private labeled the 70-154b and 70-254b for Midland, they were built to Midland's specs including use of an outboard programming box to program. I worked for a Midland shop when those replaced the Shinwa radios Midland was selling. I also know the radio to radio cloning is disabled. I think there is either a transistor or capacitor missing for that feature.

By the way Icom may not touch them as that was a Icom, Inc and Midland deal. Icom America, Inc was never involved with that deal. When I worked for Icom America we used to refer callers to Midland for product support on those transceivers.

Hello,

I have one of these very nice vintage power triodes in stock. RS 31g
was made by Telefunken and have some similarities with the RS 237
which is not far from 211.
The heater on RS 31g is 10V 4.8A, anode dissipation is 65W and max
anode voltage is 1600V. The valve is NOS and in its original box. The
price is NOK 910.- or about $ 120.- You can find a picture and more
data, and you can even order it from my web site: www.demostenes.no
Just search for RS 31g.

Regards,

Arnold Goks�yr
DEMOSTENES - N6899 Balestrand, Norway
Tlf. +47 5769 1340 Fax +47 5769 1267
http://www.demostenes.no

Thousands of different valves in stock as well as
sockets,transformers,books,caps,resistors and
other components. Web site is updated every week.
You can order on-line.

>
> Dan/W4NTI

Dunno, I gotta side with Bob on this one. It's still just a method of
encoding the english language no matter what the speed. Same as rtty,
etc. You just become a more efficient "machine" over time as far as
copy. I still copy many individual letters even over 50 wpm. Actually,
most all of them. If I didn't , I would have too many errors. I get at
what you mean about it seeming more like a language at faster speeds,
but I thinks thats probably more from actually being a bit closer to
spoken speech speeds instead of being so slow you can't get anything
said in less than 49 min. I myself used to think I copied more in
"groups" of words rather than letters at high speeds, and I'm sure I
do on many common words. But after thinking about it, I think I really
just copy farther behind, the faster I go. I'm still listening to most
every letter. On deals such as field day, it's mandatory. Almost every
thing I copy has to be kept, and be correct. No slacking off on that
deal...:(FD is the only contest I work, and it keeps me in shape as
far as CW once a year..I'll start out at one speed at the beginning,
and be 15 wpm faster by the end. It's quite a workout, cuz you have to
copy solid. All my qso's here at the house, are rag chewing. And being
I always match speeds, most are under 30 wpm. Not really fast enough
to "exercise" me as far as cw. Some use keyboards, and go real fast.
"60+ wpm" I can't keep up with those guys using the bencher paddle I
use without getting sloppy. And my typing is slower than I can send
with the bencher...:/ MK

Hi,

Copy the auction number and then click on rules safely at bottom of page.
Then you got to navigate several drop down menu boxes to create the
complaint to ebay. Once you do this you can do it again for other items fast.

It should be put in the listing offenses section.

Many times I send on in and the items stay on auction, even if the seller is
a power seller, I guess they can't stop all of them.

hi joe,

ebay stopped acknowledging my complaints, at first they would pull the
auction
and later they told me to contact the fcc using two email addresses for the
lab
they sent me. waste of time.

FCC should kick their butts with a hefty fine. But that will never happen.

300 watts out with only 4 watts in..... FREE LUNCH ??

Joe
First thing you do is copy down the item number for the auction, because you will need it.

Next go to the very bottom of the webpage for the item and find the link "SafeHarbor (Rules & Safety)" and click on it.

On the right hand side of the page will be the header What is SafeHarber? and below it will be the link "Items that may not be allowed for sale" click on that link.

On the next page find the first link "Contact Rules & Safety" and click it.

It leads you to the Rules & Safety Support form page where you will enter the info for the item your complaining about, for a radio or power booster use 1 Questionable Content on ebay > 2 Prohibited or Questionable Items > 3 Scanners and Electronic Equipment, then press the "continue" button.

The next page is the Rules & Safety Support: Instant Help page, near the bottom are two buttons use the one labeled "Contact Support"

If your not signed in you'll get the sign in page. After you sign in with your username and password it leads you to the Rules & Safety Support: Send Message page this is where you put in the item number and a short message of why you think the item should not be sold on ebay. Press the "Send to Support" button and your done.

They have it set up as a maze to keep people from finding it. But once you do find it and use it, stuff just happens to vanish off of the ebay site. That's the items that when you click the link to see you get an "invalid item" page for.

I hope this helps anyone who wants to get rid of the crap that keeps getting passed off as "Amateur Radio Equipment"!

From: Steve Massey <N6TT@adelphia.net>
Message-ID: <s9vC9.63541$CJ5.13407651@news3.news.adelphia.net>
Source record: 37058

I bought this Ameritron AL1500 new about 3 years ago, it has the Qsk5 and 10 mtr mod done by the factory. It has low hours as I used it for chasing DX - I was running it on 220 volts, will run 2kw at about 60 watts of drive, it works on WARC bands. Id rate it a 9 but I don't see a scratch on it. I have the original manual but not the boxes. Id like to trade for a Icom 756 Pro or 1000 or ? - I had a straight across trade for a Pro that fell through when he found the tuner wasn't working correctly. If interested I can be reached at N6TT@hotmail.com
I live in the LA area, if shipped it will have to go in three boxes...

5798. TVI question

Newsgroup: rec.radio.amateur.equipment
Date: 2002-11-19 20:14:27 UTC
From: gil <gilpi@mindspring.com>
Message-ID: <are5ci$c6u$1@slb2.atl.mindspring.net>
Source record: 37059

I have an Icom 725 and a set of Drake twins running no more than 40 watts and I seem to get some light TVI even with cable TV. Now when I switch to my Icom 718 (same antenna) there is no interferience at all even past 50 watts. I know there are ways of reducing TVI...better coax, good ground etc. but my question is... why dont I get that kind of TVI with the 718?

Thanks in advance

Gil

Maybe the other gear has stronger harmonic radiation, or perhaps not
shielded as well. Is your tv located in another room? Which bands do
you get the tvi on? I think I had a like situation with a FT1000 which
seemed to have a little more tvi and I kind of thought the FT1000 had a
little less harmonic suppression on ten meters than the other rig I
used.

perform some more tests and report your findings.

I have no manual for the 140 but my first guess would be that you have lost one of the low (5 or 9) volt regulators or a filter Cap in one of these supplies.

Check all voltages and good luck.

I suspect you may have a parasitic suppressor on the finals that is
going bad on the Drake transmitter.

Dale
Thanks for the response. My problem is on 40m. which I use for CW, and its not a big problem but I can see some interferience on the TV everytime I key up except with the 718, just wondering if it had to do with newer rigs having less harmonic radiation?

Gil:

I'd be looking at how each rig is powered, and I'm not familiar with the 725. But your power supply for the Drake gear and the 718 is surely different. You may have RF getting into the AC circuits with the Drake and 725 but not the 718. Cable TV will not be immune to that source of interference.

All you need to add to it is the item number of the auction. Start with
Questionable Content... Prohibited Items...Scanners and Electronics
Equipment. Be warned that some of the auctions you might report will be
cancelled; others won't.

5809. Alinco 620T reports???

Newsgroup: rec.radio.amateur.equipment
Date: 2002-11-20 01:27:29 UTC
From: steve@waits.net
Message-ID: <f327e120.0211191727.4075901c@posting.google.com>
Source record: 37070

Anyone using this radio yet? What's your opinion of it?

Is it full duplex? (I don't think it is)

V/V, U/U work OK?

What about cross-band repeat?

What about software and cable (or cable pinouts) availability?

Audio reports?

I'm in the market for a mobile and, well, the Icom 2720 would be
perfect other than the inexcusable lack of alpha tags. The Alinco,
feature-wise, looks like a decent choice.

Thanks,
Steve

That's even less international. A deaf American using ASL can't even be
understood by a deaf English person!

> What is a language by your definition?
> If you can't call International Morse a Language, what is it?
> Well... It's a code, but it's usage goes beyond language.

<snip>

I didn't prove the theory - I was talking about a --phone-- QSO in
Spanish, in case I didn't make that sufficiently clear. My point is that
you don't have to be using CW for Q signals and other standard procedural
signals to work just fine.

>Dan/W4NTI

No its still 40 db for frequencies below 30 MHz and 60 for frequencies
30 to 225 MHz

(d) The mean power of any spurious emission from a station transmitter
or external RF power amplifier transmitting on a frequency below 30
MHz must not exceed 50 mW and must be at least 40 dB below the mean
power of the fundamental emission. For a transmitter of mean power
less than 5 W, the attenuation must be at least 30 dB. A transmitter
built before April 15, 1977, or first marketed before January 1, 1978,
is exempt from this requirement.

(e) The mean power of any spurious emission from a station transmitter
or external RF power amplifier transmitting on a frequency between
30-225 MHz must be at least 60 dB below the mean power of the
fundamental. For a transmitter having a mean power of 25 W or less,
the mean power of any spurious emission supplied to the antenna
transmission line must not exceed 25 ï¿½W and must be at least 40 dB
below the mean power of the fundamental emission, but need not be
reduced below the power of 10 ï¿½W. A transmitter built before April 15,
1977, or first marketed before January 1, 1978, is exempt from this
requirement.

Might be some RF is coming down the power cable on the 725. Generally
wrapping a few turns around a toroid will solve the issue. I expect he
is seeing some sort of TV receiver overload rather than a spurious
emission.

Beware that those meters likely need a expensive calibrated shunt
resistor to display the correct current. By themselves they are just mV
meters.

5821. Help FT-897 External Conections

Newsgroup: rec.radio.amateur.equipment
Date: 2002-11-20 16:49:48 UTC
From: CJ <cjr@visi.com>
Message-ID: <3DDBBD2C.ADCA9E5@visi.com>
Source record: 37082

According to the manual, pages 10 and 18, the ACC connector, a 3.5 mm stereo jack provides an open collector output on the ring terminal which goes to ground on transmit. However.....

1. On page 18 the ring terminal is labled TXREQ.

2. On the schematic, the two lines are identified as TXREQ and E-ALC. But just to keep things interesting, TXREQ is shown as being the tip terminal.

3. The ACC ring terminal has about +4.8 volts on it (looks like logic high) and grounding it puts the transceiver into transmit mode.

The schematic does show an open collector connection to pin 2 of the CAT/LINEAR connector. This looks like the place to control an external amplifier or transverter.

I did try to connect a transverter key line to the ring terminal of the ACC connector (~+12v, 40 ma). It keyed up and stayed that way. Looks like I was lucky that I didn't destroy something. Guess the 1k resistor in series with the line saved the day.

Anybody out there know whether what I think I have found is true? That the manual is seriously wrong and that I must use the CAT/LINEAR connector to control an external device?

Thanks in advance for replies.

Not too many companies are making 2m SSB rigs anymore. Aside from the
ICOM base very $$$, you would be better off to get something like an
Icom 706 or Yaesu FT100 all band all mode radio. Then when you get
your HF priviledges, if you don't already have them, you will still be
able to use the same radio. Also the FT817 QRP rig is great for
portability. I have made many contacts on HF SSB, but not much 2m SSB
activity in my area.

Anyone have

1. A repair manual possibly for sale?
2. Hints on the cause of following symptoms:

a) Automatic Tuner doesn't work
b) Display shows all dots when first turned on. Sometimes after warm up, it goes away and a frequency is shown, sometimes not even then.

The owner of this rig had it stored away as he had moved about 2 years ago. recently took it out to use and found those symptoms. He doesn't have access to newsgroups, so I'm posting for him. TIA for the help. Please reply directly if possible. I don't always get to read the newsgroups.

5837. Replacement for GE SR III

Newsgroup: rec.radio.amateur.equipment
Date: 2002-11-21 04:17:29 UTC
From: kennethleegilbert@hotmail.com
Message-ID: <aaaf3dd9.0211202017.522ccbbe@posting.google.com>
Source record: 36948

Hi,
I recently moved into a mobile home in Bellingham, WA (maybe 90 miles north of Seattle) and the electrical interference on my GE SR III is awful for Seattle am talk radio. Reception is not a problem if no other electrical item is in use. But, for example, my compact fluorescent bulbs create a loud buzz if the radio is in the same room, the microwave buzz is incredible even if the radio is at the other end of the mobile, and even spinning my Lifecycle (it has an led display from a 9v battery!?) in the same room makes the radio buzz some. Bellingham stations are buzz-free but I prefer listening to the Seattle stations. I've searched google groups for solutions but buying "a 1970's am-only car radio" (and rigging 12 volt power inside?) does not appeal. Surely there is a $100 or $150 home radio that has the answer? The mobile home is 1980 without metal siding or roof; no aluminum wiring if it matters. Brand and model please. TIA,
Ken

Noise is a problem in fringe areas.. but it sounds like you may not have a good earth ground in the mobile home. You might try running a ground wire outside the home, and sink a 6 - 10' copper clad iron rod in soft ground, and attach the wire to that, and attach the other end to the ground connection on your SRIII.. you'd be surprised how much difference that can make.. adding a 30' wire run outdoors from the AM antenna lug on the SRIII can further improve that... the wire needn't be strung in the air to be effective, but it helps.

5850. Kenwood TS820 Technical Question

Newsgroup: rec.radio.amateur.equipment
Date: 2002-11-21 08:33:12 UTC
From: Benjamin Naber <naberb@QuixNet.net>
Message-ID: <3ddc97ac$1_2@news.teranews.com>
Source record: 36961

Hello All,

Appreciate you reading this just by the title. Some of you are in hopes of helping someone out. I got a chance for ya'll.

I have a Kenwood TS-820 (obviously from the title...) and there seems to be a problem with the plate current. While tuning the trasmitter, the manual calls to dip the plate current after you peaked the the ALC via the DRIVE control. The problem is, when I switch the meter to the IP setting like the manual calls for, the needle doesn't move at all when I adjust the PLATE control to dip the plate current. At first I thought it was the main 6046 (or were they 6064?) tubes because they look like the metal grid inside them was wrinkling up. But that wasn't the answer.

Another thing to mention is that the power output, even to a 50ohm dummy load, reached only about 30 watts and maybe once peaked to 40watts. I don't think it's supposed to be that low when it should be a 100watt output when properly tuned.

Any ideas on this, I'd really appreciate to hear from ya.

Thanks and 73

Unfortunately not a lot, apart from replacement of the whole screen module.

Has the screen had any knocks to it. The screen on the IC756 is very similar to laptop PC screens. And laptop screens can be quite prone to this 'line' problem, especially if they have been dropped etc.

The screen itself is a sealed module, with embedded controller chips, mounted directly onto a flexible PCB around the edges of the screen. I have stripped a couple of old laptop screens in the past, they are not user repairable.

Most 2 meter activity is FM-oriented and goes through repeaters.

If you operate 2 meter SSB mobile, you won't have many people to talk to, most of the time.

Having said that, the only 2 meter rigs I know of that operate ssb are the Icom 706, Yaesu ft-100 and and Kenwood ts-2000. These rigs also operate in all modes, including am, fm, ssb and cw, and operate on all bands, 160 m through 440 mhz. Don't know of any ssb-only rigs for 2 meters.

You also posted a question about 220 mhz operation. There aren't many people on 220 mhz.

You'd be best off getting a dual-band fm-only rig for 2 meters and 440 mhz. Then you'd have people to talk to! Icom, Yaesu, Kenwood and Alinco all make good dual-banders.

NOW AVAILABLE ** New Program STUMATCH.exe"

This program assists with the design of stub-line transformers used for such purposes as matching the feedpoint impedance of radio antennas to the Zo impedance of the transmission line from the transmitter. The program is applicable to both balanced-pair and coaxial lines. These and similar types of transmission line transformers have traditionally been designed with the aid of Smith Charts. The superiority of this program in respect of time, operating simplicity, accuracy and user appreciation is clearly seen.

Download STUMATCH from website below.

Source record: 36974

Hummmmm
Perhaps when you are tunning up the 820 you have it in tune position which holds the output power down to probably the range you are talking about. I also wonder what band you were trying? on 160 meters the dip is very broad but still there. also I wonder what the plate current (IP) is when loading up. when the 6146 tubes start to go bad the plate current usually starts to go up to above 250-300 MA. If this rig is new to you I might add that if you have a plug in the CW jack then you must have the key down to tune up.

these are good solid rigs so I wish you well.

I have a Dowkey Relay model number 60-262842 with the external contacts. I haven't used it in years.
One of the 110v terminals came loose and it was fixed with a short piece of wire
soldered to it and then some epoxy put around it. It worked fine..
I will ship it priority mail for $30. Can send a pic if interested
Thanks and 73's
Tim

Unfortunately, Icom won't admit to a defective batch of LCD
screens in early production # IC756's. It's going to cost you
about $325.00 + shipping to have them install a new one.
You can always computer interface your rig and bypass the defective
screen as an option.
Good Luck / Barry N1QWA

5889. Icom 746Pro - bugs worked out yet??

Newsgroup: rec.radio.amateur.equipment
Date: 2002-11-23 03:22:33 UTC
From: Steven L Umbach <n9rou@nsattbi.com>
Message-ID: <ZvCD9.115085$QZ.18722@sccrnsc02>
Source record: 36899

What is the word on the IC 746Pro?? I am thinking of buying one, but am concerned about a number of problems users reviewing it at Eham http://www.eham.net/reviews/detail/1951 are having. Just about everyone loves the receiver and dsp, but are having various problems. I would like to get a full dsp rig to have along with my FT1000MP (which I have NO desire to part with). I understand that the 746Pro has virtually the same dsp "engine" as the 756ProII. ARRL lab test show that the receiver performance is virtually identical for the two rigs. I see the major dealers are now selling it for $1549 including a PS-125 powers supply. I could probably sell the PS-125 for around $200 and end up getting the 746Pro for $1349 - which is a real nice decrease from $1899. Has anyone heard if they have fixed any "bugs" ? Why the big price decrease? Do you think they are trying to clear out old inventory for a "better" lot or just slow sales due to bad economy? Any special serial number range to avoid or look for? Does anyone know how long the special deal price/promo will be on for? I think it might be at least until Christmas and if I do buy I probably will wait till about then. Thanks for any advice. --- Steve KK9ZZ

5890. Re: WARNING!! Your CB transceiver is not safe using certian amplifiers

Why would someone actually BELIEVE that a SOFTWARE trojan horse (virus) can be intalled in a ANALOG piece of equipment???

I am an Electronics Technican and the only actual concern for a CB, is that the manufacturer can (and likely will) FILTER the CB freqs applied to the Linear Amp, making it not useful.

If you want real power ! Get your Amateur Radio License ! It is EASY and you have MUCH MORE POWER and 1000% better equipment to use.
Up to 1500 watts of LEGAL transmit power ! Actually TALK to people, not listen to static and rude abnoxious people !!!

If you have questions about Amateur Radio licensing, e-mail me direct and I will help you all I can.

A recent post to this NG spoke of Radio Shack selling out their HTX-200 2m HT's for $50. I really wanted to take advantage of such a great deal from Radio Shack, but their online website did not list this radio. Pete graciously offered to purchase one for me, and allow me to purchase it from him at cost. He was not even going to charge me shipping. Of course, I insisted that he not have any out of pocket expenses, and am sending him a money order for the full amount. He's one of the good ones, for sure. He trusted me to pay for the radio, meanwhile having mailed it to me for my approval. I received it yesterday, and I love the radio. I just wanted to post this to show my appreciation for his help and trust in a time when both are in very short supply. Thanks Pete. May God bless you and yours. I hope someday to be able to return the favor.

5896. Re: Icom 746Pro - bugs worked out yet??

I can only say that I've had a PRO for a couple of years now and have not experienced any of the problems or failures that some reviewers on e-ham are talking about. I expect people who experience a failure or problem take the time to post and those who have a good experience are a "silent majority".

The PRO-II has a couple of "obscure" advantages if you are working some of the newer digital modes. It has an extra set of 3 standard filter selections for the digital modes so you don't have to use one or more of your SSB filters. It has the ability to select a digital mode (USB-D or LSB-D) via the CI-V interface (this was overlooked in the PRO). It also has a selectable filter shape factor for the CW ops that don't care for the very sharp DSP skirts.

Where can I buy a few of these amps? I want to give a few to some of
the local PITA CB'ers in the area. Merry Christmas. Poof! <G>

CBers beleive just about anything. In one instance, a CBer asked me how to make his rig run really HOT. I told him to take out all the crystals, place them in a metal pan, then put them in the kitchen oven and bake them at 500 degrees for two hours. Never heard from him again...

Those are two completely different brands of TNC's You will need to contact Timewave/AEA to get an "upgrade" the 232.
You will not be able to do "G-tor" mode, since that is a Kantronics only mode.

These are readily available.

One gentleman has been selling them on eBay, but can be found at
Caltronics, a California parts distributors.

http://www.caltronix.com/catalog/cat89.htm (near bottom of page)

Part number 50-131 (which is .625 in diameter)
I "think" the Drake knob was this size

They also have a 50-132 with is .750 in diameter

Hi,

I'm looking for some more information on the T1000 amplifier manufactured
by Trans world electronics around 1980 in Escondido California.
Anyone out there familiar with this amp ? I'd like to get in touch with
T1000-owners. I'd like to know what kind of transistors are being used in
the power modules...

Please mail me -> on7du@hotmail.com

Johan.

I think the IC45 is just a beefed up version of the IC25. The IC25 does not have a backup battery. As I recall there were 3 power wires running into the rig. One was for a switched lead, one was to maintain constant power for memory retention and the other was ground.

20 days since last list

GE Portables

GE MPA VHF System 146 - 170 Aegis digital encryption. Nice radio
9.0 condition. 160 channel Alphanumeric display. With antenna
and battery. Great ham or public safety radio. $300.00

GE MPA VHF Select 16 channel Alpha numeric Display. I have this programmed
on Public Safety. This is a nice radio for fire or Police.

Will do G star for unit ID. $175.00

GE MPA Scan UHF 450 - 470. 192 channel scan. Alphanumeric display.

Has a good battery and new antenna. I am using this radio on ham and
scanning public safety. 8.5 condition $225.00

GE MTL VHF 16 channel scan. Poor mans MPA. No display. Great heavy duty
public safety radio. About a 7.5 condition. $150.00

GE MPD select model 470.- 488 MHz. 48 channel Alpha-Numeric display.
With battery and antenna. 7-7.5 $75.00

GE MPD Scan Voice Guard. VHF 150-170, 48 channel alphanumeric

display. Scan and Voice Guard encryption capable. 4 button Keypad.

With battery and antenna. $130.00

GE PCS UHF 440 - 470 8 channel with battery and antenna. Looks
Good. $80.00

GE PCS VHF 150 - 170 8 channel with battery and antenna. Looks
Good. $80.00

GE PLS VHF 16 channel. These average an 8 - 8.5 condition. 150 -170
but I have programmed these in the ham band with no trouble. These
have battery, and antenna. $75.00 each

GE MPS VHF 12 channel. 8.5 condition. New antennas and used batteries
Standard charger. $60.00 each have 2.

GE MPS UHF 12 channel 8.5 condition. With battery, antenna, and
standard charger. $60.00 each have 3.

GE Monogram UHF 10 channel portables. 3 radios 2 new batteries and 1
good battery. With 1 dual slot charger. $165.00 all 3 radios.

GE Mobiles

GE Ranger 150 N9HH0A110A 150 - 170 110 watt drawer unit only.
This will work with the control heads and cables I have below.
$75.00

GE MVS UHF 440 -470 128 channels. Scans and works good.
Looks great and is programmed on the ham bands.$165.00

GE MVS VHF 150- 170 MHz. 2 channel with mic. 8.5 condition $80.00

GE MCS UHF 440 - 470 4 channel 10 watt mobile separate speaker is
also the control head. With mic. $75.00

GE MLS Low Band 16 channel scan. 42-50 split. New mic. Should
Program to 6 meter ham. 60 watt $150.00

GE PSX se VHF 2 channel radio with all mount, mic, power cable,

and hang-up box. $75.00

GE Mastr II UHF 75 watt with pre-amp. No Icoms drawer only.
MC65KKG88B $90.00 each only 1 left

GE Mastr II Lowband 42-50 slit 110 watt. MC74KCN33A
With 1 set of Icoms $25.00 each I have many.

GE Mastr Pro Low band 110 watt 42 50 split. MT74TCS33
With 2 sets of Icoms. FREE. You pay shipping and packing. I
have many.

Master Exec II Lowband 30-36 split, 100 watt, CG and NB. With Icoms

And most accessories. $30.00

GE Mastr exec II VHF Mobile extender (repeater like Pac rt) for Mastr
II or Delta. $20.00 each

GE Mastr exec II VHF Mobile extender for GE Ranger (only Exec II that
I have seen marked Ericsson) $65.00

GE S990 head 128 channel scan. Not tested. $60.00

GE S550 head 16 channel looks good but not tested. $35.00

GE S700 head and complete Motorcycle cable set for Delta or Ranger.
16 channel model has short cable and some handle bar mounts. Mic
included but no speaker. $50.00

GE S825 Scan head. With Mic and bracket. Alpha numeric head

For Delta or Ranger. 16 channel Ranger can have 224 channels with

this head 32 channel radio can have 448 channels. This head can

control siren and PA system. You can also use this head to program

Deltas and Rangers. $165.00 See below cables for this head.

GE Accessories

GE Duplexer Mod DB4075 P/N 19C307166P2. tx453.xxx rx458.xxx
With cables. 4 cavity. $175.00

GE Duplexer Mod P1 P/N 19C307166P1 tx453.xxx rx458.xxx
With cables. 4cavity. $175.00

Mastr II control cable. $8.00 each

Mastr II head for mobile repeater operation. $1.00 each
Minimum 5 at this price.

Mastr II Mic. $5.00 3 for $10.00

Mastr II 8 channel tone boards. $5.00

Mastr Exec II VHF receive section. $20.00

Mastr Exec II VHF Exciter. $18.00

Mobile Repeater cable for Mastr II. $10.00

Mobile Repeater cable for Delta or Ranger. $20.00. I have seen
programming cables made from these.

GE white Versatones, 103.5, 162.2, 173.8, 179.9, 186.2, and 203.5.
$4.00 each. I have a large amount of 203.5,186.2, 179.9, 173.8, and
162.2. If you buy 10 = $3.00 each. Buy 15 =$2.50 each. Buy 50 = $1.50
each. These are the only frequencies I have.

GE Mastr II Icoms. EC = $5.00 each, 5C = $10.00 each. Picked up 3
sets of UHF 2C Icoms $30.00 per set of 1tx and 1rx Icom. I have Low

Band Icoms.

GE Delta cables. These are the downloading type used with the S820
heads. And all other heads $40.00 each

Delta mounting plates. $10.00 each

Ranger mounting plate. $15.00

GE Mastr II mounting plates $15.00 each

Power plugs for S500, S550, C500 etc heads. Good pulls $5.00

GE S-550 / 500 and others mounting brackets. $5.00 each

GE MPA standard charger, 110 volt. $25.00

GE MPA standard 5 position rack charger, 110 volt. $40.00

GE PCS Universal charger. With wall transformer $20.00 each

GE MPS 6 position rack charger, Rapid 3 hour charger

110 volt. Also works with MPR and MPX. $35.00

GE MPI desk charger with wall transformer. $10.00

GE MPI Rack charger, 8 position. 25.00

GE MPI Mobile battery charger, Rare. $20.00

GE Battery discharge analyzer. For MPA, MPD batteries. Attaches to a rapid rack charger with a DB 15 cable and uses a MPD body to attach a battery to. Has LED readout in display area of MPD body to tell discharge rate. Another rare GE goodie. $45.00

GE shoulder strap like new, attaches where belt clip is. $15.00

GE Belt clips. $10.00 each

GE Voter. Has 9 total rec. cards and 2 TX cards. With extender card and power supply / speaker. $200.00

Home made S825 programming cable. Works great but I just bought a

Factory GE cable so I do not need this now. $20.00

Other Radios and Accessories

Motorola X9000 UHF 100 watt. Has 64 channel head non-DTMF. With

cable, Speaker, and mic. Ready to program and use. $275.00

Motorola HT50 VHF 2 channel 150 - 170 belt clip holder battery and Charger. $75.00

Motorola Maxtrac VHF 40 watt 16 channel scan. 5 pin. With Mic. $225.00

Motorola Radius / Maxtrac VHF 25 watt 16 channel scan. 16 pin port. With mic. $200.00

Yaesu FTH 2070 Dual band commercial radio. 32 channel scan,

Alphanumeric display. Has battery (seems to hold a charge), Antenna,

And Rapid charger. Condition 8.5. $275.00

Uniden SPS 802TS 800 LTR portable. With charger. $75.00 Pair.

EF Johnson Challenger 5852 portables. VHF I think. With charger and batteries but the batteries are dead. Radios make squelch noise when powered up. As is $40.00 pair.

Marconi UHF portable. 16 channel scan with NOS battery. Made by Midland. $65.00

Midland 70-336B VHF Mobile radio. 8 channel scan. with mic.$65.00

Motorola GP300 VHF 2 channel. on ham band. Has battery OK condition and charger. $150.00

Motorola Mitrek VHF high 110 watt drawer only. $40.00

Motorola MT500 VHF nice shape. Crystals removed but I have 1 set of crystals for each radio. Also have a working battery and charger for each. I have 4 of these. $50.00 all

Voter from IMTS phone system. 2 rec. and 2 TX cards. $40.00

Maxon Rapid Rack charger for 0510/0520 radios. Think they will work with the sp2000 as well.$35.00

Cushman CE3 Service monitor. Has model 330 Broad band mixer / watt meter

Duplexer tester plug-in. Also has 201 scope plug-in. Some of the numeral lamps are out but you can see the numbers with a light. Works well and makes a good starter service monitor. $300.00

Consignment section

This area is for a few friends who like those other radios you know "Motorola" They are good people and I will pass along any trades you may wish to make.

Motorola single rapid chargers for HT600, MT1000, P200. $25.00 each

Motorola HT1000 UHF Intrinsically safe Re-cased looks new. 16 channel scan with charger. $425.00

Motorola Saber II UHF 48 channel scan. With battery and antenna. 9 condition $300.00

EF Johnson Challenger UHF 80 watt trunk mount, 99 channel Alpha-Numeric head. $225.00

Want List not FS
Extra parts for GE suitcase programmers Data modules, Printers, cables, proms, Anything you have extra. I need some UHF 450 - 470 scan MPD radios. How many do you have and what do you want for them? Johnson scorpion program cable. Looking for an FT90 for the wife's car.

I would like to play with a VX-150 if anyone has 1 to trade.

Terms
All prices are plus shipping from 40201. All items are used unless noted and only have a no DOA warranty if I say it works. If I say not tested your on your own. If I think it may be bad I will not list it. I take cash, Postal Money Orders, Paypal, and checks but I hold them for up to two weeks to clear before I ship. If you have a question E-mail me. Contact me off list at. Gundoc@insightbb.com

Can anyone advise what is the latest version of the KCT-T?

I have a V2.43A, what is difference between that version and latest version?

Does the version indicate hardware differences or can you simply upgrade the software (drivers?)

Also has anyone explored a "client - server" configuration: I would like to run LOGSAT on my main computer and communicate via LAN to a dedicated remote computer out at the antenna containing the KCT-T.

Is the tuner feature effective with AO-40 S band downlink? I have an IC970A with UX-98 and UX-97.

Thanks.

You're right Dino. I knew there was an IC45 (I used to own one years ago). I know there was a "high power" version of the IC25 out at one time but cannot remember the model number of it. I was thinking the IC45 was the HP version but you are right, it is just the UHF version of the IC25.

However, the power plug on the IC45 and IC25 are configured with two hots and a ground.

>manual doesn't show where it is, and I can't spot it by taking the covers off.

The IC-25/45 radios didn't have a backup battery like more modern
radios. The memory in them draws too much current to be practical for
a lithium coin cell. That's why they have a 2nd power line for
unswitched power to keep the memory alive.

There was an optional nicad battery pack for them that, according to
Icom, was basically for carrying it between the house and the car
while keeping the memory alive. Definitely not for long-term memory
retention.

I need to find a reasonable price on a AC line filter rated at 20 Amps.
The ones that I have found are rated for 12-15 Amps and anything
above that costs several hundred dollars.
Also has anyone used the Astron switching power supplies and
does the EMI filtering work effectively in the HF bands?

Source record: 36936

Bob, are you talking about the 756PRO or 746PRO? I think the original poster was asking about the 746.

I also just bought a 746PRO and I'm a little nervous about the problems I've heard with it.. The two common ones I've heard is the tuning knob binding up and cracking the faceplate (since the bolt underneath apparently gets "screwed out"..) and the other is the TX drive ic going out..

I bought my 746PRO in November, and it had a "02" by the model number on the UPC label, (ICOM's website also mentioned this when I registered it); so I wonder if it's not a 2nd revision.

I know ICOM is pretty good when it comes to factory defects like this, but I'd rather not play the warranty time-race or gamble with downtime... Does anyone know any more about this?? (And does ICOM offer any kind of extended service plan? Doubt it..)

Thanks..

-Chris / KC2DZE

Are you looking for a line filter module or a finished switchbox
that has filtering?

Best bet for one of the sealed filter modules is the next hamfest.
Haven't seen a pre-built filter rated at 20 amps. After all, most
home circuits are rated at 15 amps.

I've built 3 or 4 filtered switchboxes over the years for home PC
use. Use one filter on the main input, another one for each switched
output, and MOVs for each switched output, after the switch.
Switches and outlets come from the local hardware store. Total cost
is fairly low, and if you're lucky you can scrounge up the multi-
section AC line filters.

>> Anyone out there familiar with this amp ? I'd like to get in touch with
>> T1000-owners. I'd like to know what kind of transistors are being used in
>> the power modules...
It's not as simple as that.

TWE were taken over by:

http://www.dtsi.com/

This company make predominantly for the military.

The T1000 was a mains powered version of their Metron T500M/MA1000. The T500 was for the commercial HF market while the MA1000 was the amateur radio model. In essence the same but 'hams like numbers'!

I have two of the beautiful mobiles each with 8 transistors.

I do not have my manual to hand. However I think you'll find in answer to Johans question that the output devices are the same as the Motorola MRF421's which are i believe 80 or 100w pep devices

The amp is good for around 600w pep.

Hi Group,

Does anyone know where I might obtain an ICOM EX704 programmer at a reasonable price? I'm told there may be PC software which will do the same job so that would be agood alternative if anyone has a copy they would like to sell.
It is for use initially with a U101 12 channel UHF mobile.

Thanks in advance,

John, G8OZH

Anyone had their HTX-404 in for repairs to fix the PLL unlock (ER-2)?
Mine just did this last night with no warning....I'm concerned how
much it's going to cost to repair and if it's worth it.

Also, how long did it take once you sent it in? And did you bring it
to the local RatShack or send it in directly?

Thanks.

73,

Paul WD9GCO

5948. Motorola M1225 questions

Newsgroup: rec.radio.amateur.equipment
Date: 2002-11-24 17:42:41 UTC
From: CABBYE <cabbye@cox-internet.com>
Message-ID: <3DE10F91.EB6E62D1@cox-internet.com>
Source record: 36859

Just got a previously loved Motorola M1225. However, no manual was included. What is
the key (marked with a "Z") just below the channel control for ? Even if someone has a
"quick" overview of the operation, that would be MOST APPRECIATED !!

Is the software available for the M1225 or do I have to go to a motorola dealer? (RIB and
cable are not a problem)

Thankfully, the radio is programmed with the channels that I want, but the YoYo that
programmed it did not give me ANY features such as Scan or High-Low power and no
DPL/PL. (Maybe he did and I just do not know which combination of buttons do what)
The only thing that I've discovered is > B button changes the back ground light from red to
green and the "Z" button makes a tone but seems to do little else. A and C do nothing that
I can detect other than button A turning squelch on/off . (power is 35W and will not change...I put it on a Bird watt meter) The rest of the controls seem to be the obvious stuff > on/off - volume and the channel changing
rocker.

One last indulgence of your time, can anyone suggest an affordable yet good performance
base station antenna for 450-470 Mhz ? I would like to keep it under $200.00

In advance, Thank You for your time!
Kindest and warmest Holiday Wishes to All !

The " 02 " is a version number not a revision. These were indicators
of where in the world the unit was ment to be sold.

For example an " 01 " might be a Japanese version, an " 03 " might be
European version, " 05 " might be SE Asia etc.

For Sale: MINT MFJ-9406 six meter SSB transceiver. This little rig is a blast! Hate to part with it, but I've got a new Yaesu FT-847 that has six meters. FANTASTIC transmit audio! I worked the world with this and a little 3 element yagi. 12 watts PEP. Purchased and installed CW module.

Comes with manual, original box, stock hand mic and DC power cord.

$169 and I'll pay for the shipping and insurance by U.S. Priority Mail. If you're short on cash this holiday season, we can run your "plastic" through my little ham/swl business. (This will get the rig to you faster, too!)

Winter sporadic E season coming up, meteor showers, aurora...ALL modes of operating DX on 6 meters.

First e-mail gets it!

>>
>
> I'd try two 9V in series.

That's what I did in mine. I suppose the 22.5 volt battery is
usable until it drops to something like 15-16 volts or so -- then
the "zero" setting pot will be at its limit. It works with 2 9V
batteries in series -- you'll just have to replace'm more often.
It's been 2 years now and my 2 9Volt'ers are still Doing The Job.

I have the same problem with my HTX-202. Its most likely the lithium battery that is gone low. I think you can still order the battery. I haven't replaced mine yet and don't know how hard a job it is to get to the battery. If you do it yourself, please let me know how to get to the battery. You can order the battery from Radio Shack. 73 de Fred.

actually mine is a base version. Very heavy thing. It has 4 power modules,
but no transistor type can be found in the manual.. Only the final types
are missing. It only says 'RF transistor'. Can i still contact the company
by the other name ?

The following items are for sale as a package (preferably to someone who can pick them up in the Boston area):

ICOM 750 (Japanese version of the 751) with original microphone, 250hz CW filter, 6khz AM filter, manual, Service Manual, new ROM and battery, original box, excellent condition.
Astron RS35M 12 Volt Supply. Excellent condition.
ICOM 260A all mode two meter rig with mike and manual. Very good condition.
Mirage 100 W. 2 meter Amplifier with preamp. Excellent condition.
Datong RF Speech processor. Excellent condition.
Pentium 133 computer with Windows 98. Excellent condition.
Viking phone patch. Excellent condition.

Take everything for $600. (Miscellaneous extras, including service equipment, power supplies, spare parts, several years of QSTs, triband vertical antenna, will be thrown in.) If interested, contact me by email.

Hi, all:

I am interested in buying a SW receiver kit so that I can build a radio for my son and give it to him for Christmas- trouble is, I've never built anything like a radio before, neither have I soldered (although I just bought some scrap circuit boards, a soldering iron, and some capacitors and resistors so that I can learn how). I learn quickly and am motivated to get this thing done by Christmas, however.

What I'd like to get from you fine people are some recommendations on good kits for beginners. I have checked out a few kits, mostly ones offered by Ramsey, but I didn't get a good sense of how difficult these would be for a beginner to build. If anyone has any other suggestions on brands or places to buy such kits, let me know. I really love stuff of the sort that Ten-Tec and Elecraft offer, but I am afraid that those projects would be too complicated for one such as me... but maybe not after I've built something a little more geared toward a beginner. Thanks in advance for your suggestions.

73,

Jackie

I don't know how old your son is, but rather than building it for him, why don't the two of you build it together. I remember a long time ago, my dad and I built my Knight Kit Star Roamer receiver. I still remember it very well, even though it was 1966 or so. Dad is gone, but I still have the memories of he and I building that set.

My guess is a ten tec kit would be easier to build than a Ramsey kit, and it would be more likely to work.

I also like Steve's suggestion you build it together, or better yet, have him build it with your help.

Hi Jackie,

Although I've never had any experience of this company - try "Walford
Electronics" - they're based at:

http://www.users.globalnet.co.uk/~walfor/

and is run by a guy called Tim Walford, its literally a one-man
operation! - however, if you do a Google search, there seems to be plenty
of people out there who have bought and built his kits ! - One kit was
reviewed in Practical Wireless, a UK publication...

There's plenty of kits on the site for all varying degrees of experience

I built a Ramsey 2M RX, years ago (before I was even licenced!) - and I
found it a little tough going, admittedly I'm not an expert constructor,
but it was my first kit (other than the Radio Shack/Tandy ones) - I made
the mistake of tackling it in one go - admittedly though I made only 2
minor mistakes, and it still works today !

Let me know how it goes :)

While looking at the kit also look to see what kind of test equipment you might need to set it up. Some can be set with a simple VOM and some kits will need more.

I buit a couple of small things when I was about your son's age. Taught myself how to solder and several other things just by doing it.

Go to the Ten Tec web site and look at the receiver kits. They look about as simple as you're going to find for something that works and pulls in signals. One advantage to buying from Ten Tec, if you have a problem, they are very good about service and advice.

I've built many kits over the years, and the main thing is that the instructions be written in a clear manner. If you can follow directions, one can build a kit.

Personally, I'd let your kid build it, with your assistance, of course :-)

Have fun...

He's 13, he loves math and science, and he is very interested in electronics, but he's also a bit intimidated by all those little parts- he told me this after we'd been to a local hamfest and he got to see what was inside a Ten-Tec radio whose case had been removed. I have to admit that it got me interested in how these things go together too. About the only thing I know about electronics myself is how to identify some basic parts such as resistors, capacitors, inductors, IC's and so on. I guess that's not a bad start, but I still don't know the theory behind why you put this part here, and that part there, on a circuit board... but there is lots of great material to be found on this via the Internet, however. I also have a couple friends who're EEs, so maybe I could get them to mentor me.

My son's auntie is buying him a beginner's electronics set for Christmas. I think this will encourage him to learn electronics without it overwhelming him to start out.

Since I read your post, I have given some thought to just buying the kit and giving that to him for Christmas, and then telling him that we can build it together. That way I won't be all stressed out trying to build the thing in < 1 month too. Thanks for the idea, it's a good one. I remember my dad bought me a crystal radio set when I was about 10, and he showed me how to put it together. No soldering, quite easy, and COOL, I had my own AM radio. That was a thrill, now that I recall.

Do you have any suggestions for kits that I could buy? Remember, I'm an utter beginner, but I learn quickly and am quite bright. At least I am after I've had that first morning cuppa joe...

Thank you for your suggestion, Mark. I have heard nothing but good things
about Ten-Tec in general. I am thinking about purchasing one of their
(already-put-together) transceivers for myself, once I upgrade to General.

I had a nice conversation with the Ten-Tec reps at the Hamfest last month.
Nice folks, very informative and approachable...

Hello.. I've got an IC-746pro and I've heard that there have been some problems with the tx drive IC going out?? Mine hasn't had this problem yet, but I was just going to take a look into it - does anyone know the part number?? (and, what kind of packaging.. Is it SMT?) Also, has this only been a problem with the 746PRO, or the regular 746 also?

Thanks,

Chris/KC2DZE

Ten Tec has some kits for those who are just getting started in kit
building.
Try the kit selector web page at Ten Tec: http://www.tentec.com/Tkits.htm
it has all their kits from the simple to the expert levels. This might give
you
a better idea on what you can do. I have built the Ten Tec 705 desk mic
kit and really enjoyed the project.

5975. WTB: Empty, good condx ICOM equipment boxes

Newsgroup: rec.radio.amateur.equipment
Date: 2002-11-25 02:15:23 UTC
From: "Joe S." <joe@schlatter.org>
Message-ID: <ars1100a3m@enews3.newsguy.com>
Source record: 36886

I need the original cardboard boxes in which several pieces of ICOM gear were packed and sold.

Boxes must be in good shape, not torn, water-damaged, mouse-eaten, etc. and I really do need them to have the original Styrofoam inserts. If the boxes came with carrying handles and the loop-the-loop string closure, those must be present and in good shape, too.

This is a list of what I need.

IC-735 box; need TWO boxes

AT-150 antenna tuner; need TWO boxes

PS-55 power supply; need TWO boxes

SP-3 external speaker; need THREE boxes

PS-20 power supply w/speaker; need ONE box

And before anyone points out the obvious:

1. Yes, I know this is a wacky request -- you see, I drink a bit.

2. Yes, I now I'm dreaming. Then, again, if you look at the stuff for sale on eBay, it's no telling what will show up.

Rick -

The original 70-1000 doesn't require "software", it has the program burned
into an eeprom.

If you have a 70-1000-C programmer it will only do the Z-273 memory boards.

E-mail me direct if you need further

Communications Specialists (or Specialties) has several. Look in any AES or
HRO catalog or their web sites. Cost about $30 and up.

I think I may have a mint unit, like new. I would care to ship out of
USA though.

(I saw the other comments about the Knight Star Roamer - that's
exactly how I got into radio back in the late 1960s.)

I'd take a close look at the Ten-Tec units.

I built their 1320 20-meter QRP radio two years ago - I think it's well
within the capabilities of a beginner. I've also built their
direct-conversion "pick your band" kit - I forget the model number -
it's even easier to build. Ten-Tec believes in "modular" construction -
you build part of the kit, then test it to ensure it works before
advancing to the next step. It's a real confidence builder, not to
mention making it easier to fix it if you make a mistake!

The key is learning how to solder. Before even opening a kit, I'd go to
Radio Shack and buy an experimenters' circuit board and an assortment of
components. It doesn't matter what kind of components, all you're going
to do is practice soldering the components to the board. Once you (and
your son) get to the point where you can reliably make clean solder
connections, you can break open the kit & start building.

Good luck!

>
>73's de Jeff, WK3U.

You should see 3 wires on the power cord pigtail coming from the
radio.

The wire attached to the pointed end of the connector is positive.
The wire attached to the flat end of the connector is negative
(ground) .
The third wire which is right next to the negative wire is memory
back-up.

Place between 9 to 12 volts positive between that wire and negative,
your memories should be backed up. If you have a current meter put it
in series with the positive voltage you apply to the third wire and
you should be able to read the current draw required to back -up the
memories. then you should be able to calculate a appropriate battery
size for back-up.

Icom's back - up was a BU-1 and it was not a long lived back up
device.

Hello:

One boring evening in 1965, as a boy of 15, I read a book on
transistors. Next day I spent all my pocket money and bought my first
OC71 and 2SB56. That day and today, I am stuck with electrical
engineering.

My suggestion:

Alongwith A VERY SIMPLE and CHEAP radio kit, I would recommend the
following:

1. A soldering kit
2. Some pieces of coppered ciruit board
3. Assorted multi purpose Bipolar transistors eg LF AF RF audio Power
Switching etc.this shouke a dozen or so in all or may be 20
4. A range of quarter watt resistors
5. Assorted capacitors
6. A few Ics such as 555

7. LEDs
8. A simple Analog/digital multimeter
9 One small speaker
10. Two books for begineers with titles such as 999 miracles using 741
, Three-transistor radio circuits, funny lighting circuits, ciruits
that play tricks etc etc.
11. Enamled wire SWG18,24,36,48
12.Twenty dollars extra as petty cash
Thanks
Dilber

From: Lou <tech@dp.net>
Message-ID: <artdtr$2ggo$1@news.dp.net>
Source record: 36800

The ER 2 Display is subject to PLL voltage and tuning conditions with possible failed components and/or an IC. The battery is not mentioned as a possible cure for this symptom.

"ER 1" is correctable by the changing of the battery! But before you even replace the battery, there is a step to try. Turn unit on while holding the function button and "D" . This clears the memory. ER 1 is the RAM error message. IF the button cure doesn't work and the battery isn't bad, then it is said to be a bad diode or bad solder joints.

The above - while not verbatim - is out of the repair manual.

If you aren't equipped to do SMT work, you can pretty much forget trying to do ER 2 repairs.

Hi, Folks-

I certified for Tech Plus Code recently and have started getting my ham shack together. I'm starting small (and cheap), and purchased a Radio Shack HTX-10 10m xcvr and 10-amp power supply. With this, I'm putting up a simple horizontal dipole to handle the 25w output. I've got a couple of questions and would greatly appreciate any enlightenment you more experienced hams could provide.
1. Has anyone used an HTX-10 and, if so, what do you think of it?
2. I'm looking for a proper SWR meter and/or antenna tuner. Radio Shack has these in stock, but they're priced much less ($20-30) than anything I can find in the Ham Radio Outlet catalog. I've read that cheaper units such as these are useless. I've also read that many units are not true antenna tuners, but merely block reflected power so it won't compromise the solid state xcvr. Any suggestions on a simple, decent unit for a low-end, low-power rig such as mine?

Thanks!
Keith Simon

While it is not too much beter , you might look at some of the MFJ tuners
with the built in wattmete/swr meter.

All socalled tuners mounted at the radio end of the coax do nothing but fake
out the transmitter so it is looking into the impedance load it was designed
for. YOu loose about 5 to 10 percent of your output power in the tuner.
If you can remote mount the tuner at the antenna you have a good tuner.

I do use the mfj 948 tuner on an Icom 706 . When I got it (new) I had to go
in it and tighten some loose screws. The watt meter was not too accurate
and I did a calibration with my Bird meter. Don't get one with the built in
dummy load as they cost more and if the transmitter you use it with is solid
state you can't adjust the transmitter anyway like you can with most tube
rigs.

Well, after opening it up, the battery is soldered in fairly well. The
tab is soldered to the rf shield, which isn't necessarily a problem,
but the wire is soldered UNDER the rf shield, which is itself soldered
to the pcb and another shield piece in several places. This is not a
good thing. I'm not sure I want to try and desolder/resolder the rf
shield since the clearances are very tight and with my luck, I'd short
out a crucial IC in doing so. I'm guessing it's better left to a RS
tech, since if he screws it up, it's his fault.

Jackie,

I highly recommend the Ten Tec Model 1254 SW Receiver kit for $195.00.

This is a very nice super het rig that you can both enjoy for YEARS
and although it is a bit more circuitry than their direct conversion
rigs, this is a very nice super het receiver. The sensitivity is
light years better than the direct conversion rigs. It also makes a
nice ham reciever as well.

>by the other name ?
Now that I think of it I do believe the base amp used 28v devices.

Yes, I think their technical department can still help you with part
identification and possible sourcing though you'd be better off at
someone like RF Parts.com if you get the number.

Good luck.

Keith
If your making your own dipole just cut it at about 104 inches
on each leg and that should get you in the ballpark on the T+
area of 10. I made mine out of scrap cat 5 computer networking
cable. My first contact on it was from IN to HI not bad for
a "free" antenna. I'm still using one for 6 meters, and I'm keeping
the 10 meter one for use on field day.

I've had the Rat Shack SWR meters before, they aren't precise
by any means but they will give you an idea of how the overall
match is on your antenna, in other words their better than nothing.

CONGRATS ON THE T+ UPGRADE!!!

Fellows, fellows, fellows!
Please, let's not bicker. On the bottom of each page in the E-bay auction program, there is a Latin phrase "caveat emptor," which means in the most simplest form "BUYER BEWARE-No GUARANTEES."
To me that says it all. BUYER BEWARE. Cut & dried.
If you go to a garage sale or flea market or rummage sale, the same thing applies. NO GUARANTEES- BUYER BEWARE

From: Radiotronicgizzmo <radiotronic@spydercat.com>
Message-ID: <x%wE9.287929$r7.5222531@twister.tampabay.rr.com>
Source record: 36816

No, i meant the IC-2720H. I searched for a group and was surprised not to find any, so I create it.
then they came out of the woodwork so I deleted the group I create (IC2720H) and joined the ic-2720h group
AND the ic2720 group.

didn't need 3 of them. lol

so, ignore my message -- unless you or anyone knows of the mars/cap mods for it.

and FYI -- just for amusement for anyone reading.

I bought two (yes 2) IC-2720Hs a couple of weeks ago -- wanted one in the shack and one in the truck.

Installed the one in the shack right away and it works fine. YESTERDAY, I installed the second in the truck.

I turned it on, it worked fine -- drove all day - around town, shopping, taking the kids to the movies etc etc.
then last nite, I turned it off and POOOWWIIEEEE -- it started SHREAKING at me -- high pitch howling like audio feed back -- turned it back on, it the noise stopped and it worked fine.

turned it off, the noise started up again.

disconnected every cable except power --- noise.

took inside, used my shack head to control it -- did a complete factory reset. -- same thing -- IT WILL NOT POWER OFF WITH THE DC CONNECTED without horrible screeching noise.

Now that is something I haven't heard before.

AES said to bring it back, and I will tormorow, and they'll swap me a new one.

man.

> the battery. If you do it yourself, please let me know how to get to the
> battery. You can order the battery from Radio Shack. 73 de Fred.

Usually not. Err-1 is bad lithum battery. Err-2 is too much RF leaking
in from the antenna on transmit. The cure is:

1 Run at a lower power, e.g. low power or less than 13.8 volts
input on high power,

2. Use a remote antenna. (one connected via a coax cable away from
the HT.

3, Use a a better matched antenna (lower SWR).

4, Resolder antenna connector.(last resort)

I've also replaced the batteries. You open the radio up and it's
in between the circuit boards. There's enough room to be sloppy
with the leads if you tape it well. I just soldered leads onto
a lithium battery of the right size (very carefully) and taped
it well and soldered the leads to the leads of the old one cut
off at the battery end. A little more tape and viola, a fixed
HT.

Geoff.

Hi Jackie,

No Problem!!

I'm thinking of doing some more kit building and am looking at the
Wurzel, just something to pass the time away! - but as I said, these kits
are being raved about in the UK amateur press :)

Let us know how you get on!!!

6011. FS: Diamond SRH-519 & SRH-805 HT Antennas SMA Mount. 144/440 Dual Band

Newsgroup: rec.radio.amateur.equipment
Date: 2002-11-25 23:41:25 UTC
From: frank@damato.com
Message-ID: <1276490d.0211251541.fffde94@posting.google.com>
Source record: 36821
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.antenna

Selling each antenna for $20 (includes shipping price). Antenna's are brand new, still in original yellow plastic cases. I have no need for them. Received them in a swap. you can see a picture of them at www.frankdamato.com/diamond.jpg

I Accept Paypal as Payment

The Diamond SRH-519 is an HT antenna for 2 meters and 440 MHz. It is 8.5 inches (21 cm) tall. This flexible antenna is black. Gain is a 3 dBi and it can handle up to 10 watts. This antenna terminates to a 50 ohm SMA. It is also very effective as a receive antenna for these bands: 150, 300, 450 and 800 MHz.

SRH-805 Diamond 2m/70cm SMA Low Profile Helical * Tx: 144, 430 & 1200MHz * Rx: 150/300/450/800/900MHz * 10W Max power handling * 1.75 inches (4.5cm long) * SMA fitting
Extremely low profile, yet provides transmit (Tx) capability on three bands and offers useful wideband reception, also for use with scanners. Suitable for Horas, Standards and Yaesu.

One other thing to try... If you are using an external power supply, try shortening the dc lead to the radio or at least move it away from the antenna. Another thing you can try is to wind the excess dc lead a at the radio end of the and of the dc lead into a three inch loop and wrap some tape around it to secure it from coming unraveled. RF from the antenna can often enter the HT through the DC lead and force a PLL unlock (ERR-2).

Cheers,
Rick

To echo the other statements:

1. Just cut a dipole for the proper length.
2. Hook it up.
3. Talk
4. Of course if the match is too bad, your radio may not give full output. Trim it a bit.
5. A cheap SWR bridge will be fine. You don't need to get a perfect match.

It says you're looking for a 24AT. I have one that I have repaired, except for some reason it doesn't see the battery when it's connected. Contact me and make me an offer if interested. The radio itself works great.

Take care, and stay well.

6017. Emergency 12 volt battery power

Newsgroup: rec.radio.amateur.equipment
Date: 2002-11-26 02:57:01 UTC
From: Brian <KG4IJR@atmc.net>
Message-ID: <aruoco$81uj$1@news3.infoave.net>
Source record: 36827

Has anyone had any experience using one of those emergency jump-start setups used to start vehicles with dead batteries as a power source for field/emergency use? Would there be any advantage to using one of those over, say for example, a deep-cycle marine battery or some such as a power source?

The use I have in mind is for something that would be used mainly for powering a 2-meter mobile rig (not necessarily in a car) for hurricanes or disasters, so it wouldn't be used on a regular basis.

Any comments, pro or con, would be appreciated.

I have a couple of those, and have used them to power a rig.

Some pluses include being able to power all sorts of 12V items, and
jumpstarting your car.

The gel cell doesn't leak, even if turned over.

They are smaller than a typical marine battery making them more
portable.

I have not run it all the way down, but I estimated a couple of days
of use at 5/5/90 with a 50W FT90 mobile.

Before the spring season of PS events, I am planning to build a radio
cart with one of these to power it.

Happy trails,

Do you have to power it from external DC then ? If so have a look at
the DC jack there is a " switch " built into the jack that disconnects
the battery negative when you are powering the radio from direct DC.
If this " switch " is bad in the jack it will not power from the
battery.

Thanks for the suggestions....

I'm running with the alkaline pack, factory duckie. It didn't have any
problems before... this just crept up on me.

Yes, it's the ER-2 error, not ER-1. I tried the memory reset as well,
figuring it wouldn't hurt (I don't have anything programmed yet). I
get the error as soon as I turn it on, so there really isn't any RF to
leak back yet....

I'll try using an outside antenna, but if I still get the error, I'm
shipping it off. With my luck, it's a bad PLL chip, which will
probably cost a lot....

Did you not see the tips I provided as to causes - out of the repair manual?
There are a few components and/or an IC which could be bad OR PLL tuning.
Read my earlier post. While my post was not verbatim, it spelled out all the
book stated as to cause/cure.
If you're not into or equipped for SMT repair it won't be easy. TECH@DP.NET

> of your automatic ATU".
>

Dear Nick,

Feeding badly mis-matched antennas with coax is a bad idea. The losses in even good quality coax escalate rapidly when operated at high SWRs. The matching unit may present a good 50 ohm resistive load to your rig but the feedline will still be running at a high SWR. If the built in ATU wont match it, it probably means that the aerial shouldn't be fed with coax.

The manual for the MFJ is here
http://www.mfjenterprises.com/man/pdf/MFJ-914.pdf

It is as uninformative as most MFJ manuals.

From the operating instructions I would expect to see 3 fixed caps and a coil tapped in three places inside. It will put these either in series or parallel with the antenna. It may be all caps three put in series, three put in parallel.

This page has a little more info
http://www.wb0w.com/mfj/manuals/mfj914man.html

There are some pretty poor/mixed reviews on E-ham

http://www.eham.net/reviews/detail/884

I'd say you'd be better off getting a proper ATU and some ladder line.

I'd strongly recommend the SGC 230 but that may be too costly for your plans.

just my tuppence worth

Hi there,
Can anyone tell me if there is a mod for this radio to speed up the scan rate?....it's soooooooo slooooooow......
I love the radio but....
Any help would be greatly appreciated!
Thanks-Russ

6036. RCI 2950 Chip?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-11-26 18:37:46 UTC
From: KB9TMP <kb9tmp@juno.com>
Message-ID: <uu7fra1ed4sj5b@corp.supernews.com>
Source record: 36846

Check out this auction for a RCI 2950 the guy says
he bought it at a auction and paid $129.99 for the
"full band coverage chip" to be installed.

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1940213535&category=4674

I haven't heard one that good since I worked at a
Mazda dealership and our service writer sold a
guy a "valve adjustment" on a RX7 with the
rotary engine.

BTW for those who know nothing about autos
the rotary engine doesn't have any valves, kinda
hard to adjust something that isn't there. ;^)

>

Sorry -- I was actually replying to a different message, then I saw
yours.

Nope. I'm not set up, neither am I inclined to mess with smt
components on a board that dense. I have a Metcal iron, but don't have
the right tip, and it's just not worth it when there's a guy who's
done a bunch of these already.

RS wants $49 flat for labor, plus parts. Seems reasonable enough.
I'll get it sent off after Christmas, since it's not that urgent and
there's only one 440 repeater in the area.

Thanks for the help.

73,

Paul WD9GCO

Will pay fair price for spectrum analyzer plug-in for my Cushman CE-5
Service monitor. Must be in good working order and a clean bright display.
Don't know the model number.

If your interested I have a very clean Cushman CE-24 and a TTS-44. Would
consider a trade for one of these. They work and have new batteries.

Contact me via e-mail, w6lar@arrl.net Thank! Larry, W6LAR

FYI, there was a third party CPU chip made for that rig that added several additional features such as additional frequency coverage, frequency offsets, splits, etc. The chip sold for around $125.00.

I understand that Juno and Hotmail will no longer accept Email
from the ARRL server. Something to do with stopping or reducing
SPAM. Negotiations underway to resolve problem, but does not look
promising for a quick fix.

I received this information from another ham. Have not received an
ARRL bulletin verification as of this message release time.

Either put 120 Vac on the terminals to pull it to "transmit" position, or
open the match box. Remove and store the receive tap. Change so 239
connection to bypass relay. You can leave the relay there as a tie point
for the line.

Read W4RNL articles about Johnson Matchbox.

I had this problem with my HTX-202 when running high power to the
rubber duckie; someone suggested placing a .01uF cap across the
battery leads where they entered the radio's circuit board.
Problem fixed. You might try that.

That is funny, two of the bigger Spam conduits dumping the ARRL.net for Spam. I've long ago made message rules dumping anything from Hotmail and Juno because I became sick of all the Spam from their sites.

Sounds like a solution looking for a problem.
Why not save the money and switch the
jumpers instead? Or just buy a real ham
radio in the first place!

It doesn't surprise me at all. However Hotmail and Juno are among the
worst offenders themselves.
I never used my arrl e-mail address for anything else but to receive
the newsletters and yet see that spammer use this same address to send
me their junk. It seems that the spammers got hold of the e-mail
database at ARRL... or worse... :-(
The first spam arrived in my mailbox just weeks after applying for the
arrl e-mailaddress (my hotmail address was spammed within the hour
without even using the account).

It would not surprise me even slightly if various spammers are simply
connecting to the ARRL.NET mailserver, and doing an iterated
"dictionary spam" attempt against every possible callsign. It's not
as if the algorithm for creating U.S. callsigns is a difficult one to
implement ;-)

The spammers wouldn't care a bit if 98% of the callsigns they try
don't actually correspond to an @arrl.net address.

I'm pretty sure that some spammers harvest e-mail address from the ARRL web site. The only thing I used my ARRL address for was to get e-mail from the local club. Never got any spam related to it. Then I put a small ad in the back of QST and used my ARRL e-mail address. Now I get a fair amount of spam addressed to my ARRL e-mail - much of it from supposedly overseas "officials" wanting wanting me to join in a joint venture that will yield lots of money - but of course I first have to send them my contribution.

Once ARRL puplished this on any of their web pages, the spambots found it and added it to their email lists. A spambot just roams web sites looking for blocks containing @ and add the block to their email lists.

A lot of spam senders actually spoof an email address from their list and insert it as the sender when it sends spam to another email address on the list. It is not uncommon to get "bounced email" messages from a server saying you sent mail to xyz@somewhere.com and xyz is not a known user on the system. Of course, you never sent xyz any email but a spam machine used your email address as the originator in one of it's mailings.

Dont know if they will ever put an end to this goofiness. I have had some luck in small claims court against the chain mail senders (move your name up the list and spam 10 million more). If I spot a NY addresss in the list they are fair game. They never appear and lose by default. Then the fun begins on collecting :-)

Steve

HotMail is a great one to talk! From my location, it appears to be the origin of a significant percentage of the world's spam! And complaints to their webmaster go unanswered. What a joke!

I am looking for a microphone cable that will fit the ICOM IC-T7 HT. What would be perfect is if someone had a mic that the mic head itself is screwed up and the cord and connector is still good. I need to make a new cord for the packet modem, and want to utilize a better connection that the crappy separate connectors that radio shack sells. I just can't justify buying a perfectly good microphone, and cutting the head off just to get the cord..... but if someone had one, where the mic head itself was bad, that would be better.

The type of plug used for the above listed HT is the one where you have the walkman-headphone size mini connector and the sub-mini plug, which are about 1/2 inch apart.

Thanks,

Thanks for the input; sounds like what I need to know. The main factor, besides being easy to use, is that it must be as stupid-proof as possible. I spend my time during hurricanes in the Red Cross hurricane shelters, and anything unforseen can (and usually does) happen. Everyone that has ridden out a hurricane in one can tell some horror stories about what some civilian has done or tried to do.

For six or more months, I've used a program called "Mailwasher." Free. www.mailwasher.net. Written up in one of the PC mags this month as highly recommended. In the beginning, you need to look at incoming mail and flag those things you never want to retrieve, but within a couple of weeks, it's filtering out almost everything. It also flags potential viruses. Maybe two to four spams slip through in a week.

It does display advertising which can be stopped for a one-time donation of your choice. $20 is requested but not required.

You can also preview any questionable message before it is downloaded and decide if you want to delete it, blacklist the sender or "bounce" it. "Bouncing" may be its best feature. It sends a message back to the originator that essentially says, "you sent this message to an invalid email address," causing a lot of spam generators to remove your address from their mail list. Quite a nice program.

I have not noticed spams coming to my callsign but will watch for it.

For a LONG time, I had Outlook Express filtering out (deleting) anything coming from Hotmail. Mailwasher helped enough I was able to discontinue using that filter.

Good luck.. Ed W5EJ

If I do the MARS/CAP mod on my VX-150 HT -- which pumps 5 watts in the ham 2M band -- what can I expect at say 156 MHz (marine) if I change to a ducky resonant on the marine band?

Will the radio still pump anything near 5 watts?

Of course, I would use it only in an emergency . . .

I too use MailWasher and find it extremely useful. However, very little
of the bounced mail goes back to the originator because its rare that
a spammer would use his real address. Instead it makes a second bounce
and winds up at Postmaster@your ISP. Thats fine with me because I would
rather my ISP deal with the crap they are letting pass through.
However, some smaller ISPs don't appreciate this and one of mine in
particular (a friend) has asked me not to bounce msgs coming via them.
Nonetheless, its a nice feeling to delete and bounce without having to
download the crap and be continuously cleaning out your mailbox.

Kenwood TS-440S AT HF Transceiver - "LOADED"!
10 thru 160 meters with WARC bands
100 watts with built in Antenna Tuner
YK88SN and YK88C filters installed (SSB and CW)
VS1 Voice Synthesizer - voice readout of freq .
SP-430 External Speaker in original box
MB-430 Mobile Mounting bracket in original box
MC-50 Desk Microphone
Hand microphone and the 13.8 Power Cord

Original operation manual
Original - double boxes for Transceiver
Original boxes for filters and synthesizer
All instructions and documentation
Service manual included for HF rig - speaker -filters etc.

$600 - USA sale and shipping only

Ed
That's the reason I use the disposable email accounts
like yahoo & hotmail. When the spam gets to much
I just switch accounts and start all over. I NEVER
let anyone know my home ISP account address
that way I never get spamed there.

Hello all and thank you for reading this message.

I have recently aquired an old Siskin Multi-cat controller for my aging 747. The software supplied with it (procat) works fine, but I am looking for some more modern (windows) software which incorporates a logbook program to use with it.

At the moment I am trying TRX manager, which I don't really like. Has anybody got any suggestions please?

Also there is a miniture toggle swich on the bottom of the box, can anybody tell me its use please?

Any help would be very gratefully received

Many thanks

Alan

Oh and one more minor detail. If you use a 'ham' radio on the marine bands
it is not legal. The FCC requires type acceptance.

I will have too agree with the Dan
Leave the ''pump'' lingo on the chicken band and your comment use it only in a emergency ?
Please explain what type of emergency would require you to use a radio that is type
accepted
for the ham bands on a marine frequency?
Mars/CAP mods are intended for just that, with the proper credentials.

Only problem with that is all your friends are constantly having to change
their mailing lists. I never change mine and using Mailwasher, don't have
to. My current spam level is maybe 2-3 per week that sneak through MW...
probably they arrived in the account in the few seconds between the time MW
checked the mail and when OE actually retrieved mail.

To Dan, Donnie, DBN and W6DKN:

Pump this: You obviously don't know the answer and don't have a life.

It is not unlawful to make this mod or to possess such a radio. It is not unlawful to use the marine VHF band without a license, because no license is required. It is not unlawful to use a non-type-approved radio in an emergency.

It is called the MARS/CAP mod. I didn't name it. I don't represent anything by making the mod. I just solder a jumper in the privacy of my shack.

Lastly, you have no reason to believe that this HT would actually cause any harmful interference on 156 MHz.

Ken,
Marine band radios are dirt cheap, so why would you jeopardize the ticket you worked hard for?
I bet if you this, go down on a police frequency with a modified radio make a emergency call
and see what kind of hot water you will be in.
You can be assured with all of the other modern day devices i.e. a cellular phone, in a investigation it may not come out in your favor.
I am not going to debate with you about what is right or wrong anymore, I just hate to see a
ham who worked hard for his ticket get in trouble for a piece of gear that was not intended for
use on non ham bands.just my two pennies worth.

I am going to part with my Alinco DX-70TH as I have ordered a new Yaesu FT-897

I have the radio, hand Mic, and manual. No mobile bracket or box. The radio was my primary rig until I purchased a TS-450SAT. It became my 6 meter only rig for the last 6 months. Now that the new Yaesu is on the way it is time to move it on.
The rig is abt a 9 out of 10 and has never been mobile. All panel lamps are good. Radio was back to Alinco abt 2 years ago for a tune-up. I have never had any problems with the rig.
This is the 100 watt rig on both HF and 6 meters. If you want more info or a picture let me know and I will take a pic and send it to you..

I am asking $450 plus shipping and insurance.

Great starter or back up rig

Dan/N&#65533;FPE

Water-cooled? That was funny...BUT what isn't funny is the way is was
presented. Instead of putting someone down, why not politely correct him?
Sheesh, we're having a hard enough time fighting to keep Amateur Radio alive
and don't need any more bad examples for everyone to see.

OK, with that aside...

Modify it all you want to Ken. Your factory antenna will mostly likely work
OK on 156Mhz and you probably won't see too much of a power decrease, if
any.

Just don't use it out of band unless you have an emergency where life or
property are at risk and you've already exhausted every other means of
communication.

I used my IC-706 in the middle of Utah's west desert to contact the
Sheriff's Dept. and dispatch a life-flight helicopter because I had no cell
phone signal and I couldn't get anyone to answer on several ham repeaters.

I'm still hammin...

73,

I intend to have it with me while fishing inshore, on lakes and on rivers. The low ground is often poor for land VHF, but there sometimes are boats in plain sight. It is nice to know I could call Mayday on channel 16 if I got into trouble -- without carrying a second radio.

For deep backwoods emergency use I do bring an additional radio -- an airband HT. I have never used it but it is nice to know that regardless of terrain, I can send a Mayday to commercial aircraft on 121.5 AM. If I could modify the VX-150 to TX on 121.5 AM, I would do that too.

I guess the folks who are critical of doing this kind of thing would rather just lie there injured and alone and die. I have no objection to their doing that but, for me, I would like a chance.

Correct me if I'm wrong, but I don't think the MARS/CAP mod does not
get all the way to the marine band anyways. I believe that the
MARS/CAP mod brings a 2M rig to transmit on 142-150 mHz instead of
144-148.

MARS/CAP mods are part of the radio's design, and perfectly legal for
those authorized by those groups.

I think Ken means a "freeband" mod, which goes beyond the radio's
design, and may produce low power, harmonics, and other problems when
that far out of its transmission specs.

Also, you are on thin ice legally in using a radio out of its band.
Saying you would only use it in an emergency is fine, but make sure
that the emergency involves immediate threat of bodily injury, and
that there are no other possible means of communications.

It being an emergency may be a helpful defense when brought into court
over illegal transmissions, but it will not automatically make
everything all right, and you could still be penalized by the FCC.

Happy trails,
Gary (net.yogi.bear)

Besides potentially poor performance, you can expect to be in
violation of FCC type acceptance regs which largely prohibit the use of
non-type accepted radios on commercial or marine frequencies.

If you need portable coverage in both ham and commercial bands, my
advice would be to get a Motorola Saber, MT1000, or MT2000, and have it
programmed accordingly. They're broadbanded enough that they can do 2m,
MARS, and marine in one package, and they show up at both ham swaps and
on Ebay.

> Will the radio still pump anything near 5 watts?

Impossible to tell without looking at the design specs. I'm not
familiar with the VX-150.

> Of course, I would use it only in an emergency . . .

You would trust a radio that may not perform at spec in an
emergency? You're braver than I am...

Nothing could be further from the truth. It's just that, if my life
or that of my companion(s) were at risk, I would want some assurance that
the radio I carried would do its job with a good set of specs behind it.
The only way to get that assurance is if the radio in question is (1),
designed to work on the frequency in question; And (2), the manufacturer
has certified that functionality through type acceptance.

Also, as others have pointed out, I hate to see someone risking
their license in the manner that you are.

I still think you'd be better off investing in a Saber or MT series
portable, but it's your call.

Good luck...

If you have any type of technical background in the RF arena, you
know as well as I do that this is a very dangerous assumption.

If you're bound and determined to do this, please do yourself and
others a favor by checking your portable's output on a good-quality
spectrum analyzer before you take it into service.

The MARS/CAP mod for the VX-150 expands the range to 140-174. See:
http://www.icongrp.com/~sllewd/vx150main.html

Highest marine band frequency is 162.025. Channel 16 is 156.8.

I guess different units have different coverage after a MARS/CAP mod.
I got that from another 2M unit specs on the mod. I could not find
exact frequencies for what MARS/CAP actually uses on 2M.

That may resolve the technical issues, although not all standard
antennas will cover that whole range well for xmit.

You still have the legal issues, though. Even though your emergency
situation may warrant the use of non-type accepted equipment, you may
still have to go to court over it with the FCC.

I know a second radio is one more thing to worry about, but having a
marine radio on your boat is not that strange. A friend has one in his
sea kayak. You could monitor on the VX-150 for ham and marine bands,
and pull out the marine radio to transmit during emergencies.

It appears that the VX-7R does quite well up to around 165 MHz with
the MARS/CAP mod -- almost full power. I am hoping the VX-150 will do
as well.

OK. This is helpful and these are rugged radios. However:

-Motorola Saber, etc: 8" X 1" X 3", 26 oz., $500 and up

-Yaesu VX-150: 4" X 1" X 2", 12 oz, $79 new complete kit at
gigaparts.com

I own three (3) marine VHF radios, including the HX-460S. I use them while boating. The fishing I am talking about is camping/hiking-type fishing. I have to carry the radio, not my boat.

I keep in contact with folks in my party via 2M, so I have the ham HT with me anyway. You can't lawfully do that with a marine radio since most of the time we are on shore or in the woods. I guess we could claim that our sweaty socks are a waterway.

>to a ducky resonant on the marine band?

The expanded coverage for MARS/CAP on one of the Radio Shack HTs is 142 to
149.88 Mhz. If those are the same frequencies you'd get, modding your Yaesu,
you're out of luck for the Marine Band.

Whatever works best for you, John, is certainly what you should do.

I made this a new message so you can see that all of my outgoing new stuff includes my email address in the signature. I've had this address for ...mmm... maybe 3-5 years and displayed it freely. The only other address I have is my callsign at ARRL.net and that auto forwards to the one below so anyone wanting to reach me and knowing only my call can get through.

Like I said, MAYBE 2-4 spams per week get through to me. Nothing. In my case certainly not worth the trouble of deceptive measures like inserting "nospam" which people must take time to remove, or otherwise hiding it.

Cheers... Ed

For Sale: A very, very nice Heathkit HW-100. Great for the collector or for an inexpensive first rig. Comes with the Heathkit HP-23 power supply and the cable that fits between the supply and rig. I have also purchase a W7FG Vintage Manual for the HW-100 for about $40. I'll toss that into the deal. The rig has two NEW 6146 finals and a new 6CL6 driver. I will toss in the spares. Very good condition...no dents, no rust, original paint, original knobs. Comes with TWO mics, one the original Heathkit hand mic and the other a Turner mike that looks just like the Heath mic. Works great! Received excellent reports from all over...both audio and signal wise.

$295 and I will pay for the shipping and insurance. If you're short on cash, we can run the transaction through my ham/swl business using your "plastic".

You're also welcome to call if you want further info.

First e-mail or phone call gets it!

6125. Need Goog AM Receiver

Newsgroup: rec.radio.amateur.equipment
Date: 2002-11-29 04:25:28 UTC
From: Rick Pierce <pierce007@att.net>
Message-ID: <3DE6ECA3.6040401@att.net>
Source record: 36736

Hello All,

I know nothing about shortwave and worldband radios, but am told they have better than average AM reception. I need a good AM receiver to pull in a low power AM station from about 20 miles away. Currently, I can get the station on my car radios, but not on any radio in the house.

Can anyone help out with recommending a radio (new or used) that would have a good chance of pulling in the station? I am looking for a modest price radio in the $150 or less range. Somebody once recommended a SONY 3??? as a classic radio with a proven record, but I can't remember the exact model number.

Thanks for any information you may have!

Radio is immaculate.

Comes with mike, manual, orginal box and FM board installed.
Built in keyer, NB, RIT and Split plus a DVF (Digital Variable Filter)

This rig covers 160m-6m. Radio is housed in a solid aluminum black anodized
case. Knobs are aluminum. No plastic here.
See
www.patcommradio.com
for details and specs.
See EHAM for reviews of this rig.

It's just not a good idea to go admiting, in a public ham forum, that you have modified a ham radio and intend on transmitting where you're not allowed. If you're gonna stick to the philosophy that modifying your radio to illegally transmit on a non-ham frequency, you might as well go around saying that you're thinking of buying a commercial radio with your local police frequency on it to use it "in case of an emergency."

Ham radios are not type accepted. This means that they do not meet the requirements that commercial radios have to. This may result in poor performance outside of the ham bands or as a worst case scenario, cause harmful interference on commercial frequencies.

A commercial radio, such as a Motorola HT, can legally be used on both commerical and ham bands (with proper licenses if applicable) because it is type accepted and exceeds standards for ham radios. With the Motorola Saber (which you can get for a reasonable price on Ebay), you could program in ham and marine frequencies and not worry about the performance because these radios (and other radios like these) are made for such a broadband of frequencies and there's no legal aspects to worry about because you have your ham license and marine frequencies aren't licensed.

Just my $.02 worth.

Can anyone help me with the schematic for the option KEYBOARD OPERATED SEND unit (KOS-100) for a Doventron MCP-1000C? I know that it is not possible to order that option from Doventron, because Hank Sharfe W6SKC vent silent key in April. The company Web page is altso gone. So if anyone can help me with a schematic so i can build that option, it will be very nice. Similar circuits that are easy to build and attach to my doventron will altso be great.

Hello all,

I have a client looking to move 30-40 used Visars model H05RDD9AA4, UHF 403-470mhz. They would be interested in selling in lots of 10 each at $160 for radio, antenna and beltclip holster only, (price includes shipping to your home/business.) Radios are described as excellent physical and electronic condition. Aftermarket batteries available at additional cost. Payment via bank transfer or check/MO. PayPal is available, but not advised due to higher costs.

If interested, feel free to contact me.
thanks!
Randy

> gigaparts.com

Being able to absolutely avoid potential prosecution for a type-
acceptance violation, and being able to avoid the risk of losing one's
ham license in the bargain: Priceless.

Cost is not the only factor here. You most certainly get exactly
what you pay for in the electronics realm. Personally, I would not trust
a $79.00 radio to be a good lifeline, especially when there's nothing
else around to back it up.

Show me that the same Yaesu radio can be a solid and
consistent performer, under the same environmental conditions that a
Saber or MT series is built to withstand (heavy rain, snow, dirt, etc),
and I will happily shut up.

Good luck. I have a feeling you're going to need it...

For better AM broadcast reception, consider the
GE Superradio III. The internal ferrite antenna is larger
than those used in ordinary radios, and this permits
better reception of distant stations.

They are sold in many department stores for $45 - $55, including
Farm and Fleet. I've also seen them in hardware stores, at higher
prices.

You can buy it over the internet from Grove Enterprises:

http://www.grove-ent.com/RCV5.html

Hello Steve,

I dont know the 620, but the 610 does full Duplex, so I guess the 620 is also capable of doing so.

V/V and U/U did also work ok on the 610E.

Dont know about Cross-Band Repeat and Software.

But I did not buy the Alinco again, I did go with Icom or Kenwood the next time. The 610 is about unpossible to use mobile, just try to switch to repeater offset. The handling of the radio is just awful, my 706mk2g is much easier to use instead (and it is surley not the easiest radio out there)

Good luck,
Marco DJ5KW

Hi there,

I'm using the legendary R&S SW-Receiver EK07 (60 kg, 40 years old)..

Now the SSB-Demodulator NZ10A (seperate unit, 30 kg) broke down,
the power-supply-transformator (many diffrent voltages) blew up.

Can anybody help ????
Part No. is: NZ10-3.2

Thanks in advance,

Nick

6142. FT-50R battery needed.....

Newsgroup: rec.radio.amateur.equipment
Date: 2002-11-29 21:25:21 UTC

Hi all, I am in need of a dead FT-50R battery pack, number FNB-41.
This is the 9.6 volt @ 600ma battery.
I dropped mine from a rather high place and broke the case pretty badly.
My batteries are good and the radio still works!!
If you have one that you would like to part with please let me know what you
want for it.
Of course I'll pay for shipping.
PLEASE e-mail me direct at:

mrrusso@optonline.net

THANKS and 73, Mark N2FLF

>thanks,
>Bill
>\

I had a TJ antenna company screwdriver. QC was a real problem. It
comes with a small matching xformer for 80m, but they had poor QC and
they had to send me 3 of them to find one which worked.

a buddy of mine blew out 3 screwdriver motors. apparently when TJ
moved mfg locations they had some QC problems with those as well.

Antenna is very, very, very touchy about grounding. unless it's
perfect, the antenna won't work.

i finally gave up and sold mine...

I just purchased a couple of the PK-Basic keyer kits from Jackson Harbor. Very small; I plan to mount one in a mini-Altoids box -- smaller than the common Altoids box. Here are a few questions for anyone out there who has experience with this keyer:

1. Keyer needs 3 to 5 volts. How about running it off two or three watch batteries?
2. Keyer needs a piezo transducer (basically a very high impedance speaker) so you can hear the sidetone. Can't I just use an RC circuit and use common ear bud earphones -- the kind you can pick up at Radio Shack or any other place that fine electronic equipment is sold?

Thanks.

Hi,
This question may have already been asked but I could not find it on
a
search of Google.
How easy or hard is it to install a CTCSS encoder from one of the
third
party vendors in a rig? In my case I have an older Kenwood 2 meter unit

that I would like to add an encoder to. The TU-3 that is the Kenwood
module is no longer available. I've seen adds for other encoders but am

not sure this is a good idea.
Any input on this topic would be greatly appreciated. Thanks in
advance

Too much effort for most spammers I'd guess. There are far easier ways.

I don't know why the ARRL would be running an outbound mail relay
service anyway - you should use your ISP's server for that.

That's a bit misleading. A lot of spam gets sent with faked hotmail.com
addresses, but the spam often doesn't going anywhere near a hotmail.com
server. There's nothing MS can do about that.

If I misconstrued something, I am sorry.

I asked about whether the VX-150 with the MARS/CAP mod would be
effective on the marine band -- for emergency use.

That great mind DBM responded:

>Pump?? Your Handheld is water cooled?? Or maybe you mean output power. How abt you learn
and use the correct terms >instead of CB lingo.....

To which you added:
>Oh and one more minor detail. If you use a 'ham' radio on the marine bands
>it is not legal. The FCC requires type acceptance.

Perhaps you though it was helpful, but I did not. Maybe you
overlooked the "emergency" part.

And thats why spammers use a fake hotmail.com address and hotmail.com
winds up in everybody's filter list.
There's a very finite number of spammers in the world...far fewer than
one would think when your mailbox is full of crap email everyday. MS,
if anybody, has the resources to put a big dent in the numbers.

6162. Re: Screwdriver Antenna Decision

Newsgroup: rec.radio.amateur.equipment
Date: 2002-11-30 14:04:43 UTC
From: Ed Juge/NM <ed@juge.org>
Message-ID: <dC3G9.20896$NV.434898@news.direcpc.com>
Source record: 36673

I have a Stealth/4. Best quality construction I've found. Completely sealed coil assembly... no dirt or moisture can get in. Highest Q with a 4" diameter coil. Performance is equivalent to a "bugcatcher." Mine, with the whip I chose is about 12.5 feet long. The design of this screwdriver keeps overall length of the coil, and therefore the overall antenna, the same whether you're on 10 or 80 meters. The design is patented. You can adjust it so that when you remove the whip, it will always just clear your garage door.

Two of us, locally, have them and the reports are consistently "better than we've ever heard you before," on 40 meters where we mostly operate. Reports on 75 are also excellent.

For best results, mount any mobile antenna as high off the ground as you can and get all of the loading coil ABOVE the roofline of the car. You'll have to balance that with the overall antenna length you want since, on the lower bands, length is also a factor in performance. Mine is mounted on a Dodge Durango. A local welding shop fabricated a great mount for me that is welded to the frame and places the mount close in on the left rear of the car, raised about a foot above the bottom of the bumper (positioned for garage door clearance). A good ground is a must! My ground through the mount seems to be sufficient. I also ran a 3/4" copper strap from the top of the mount to the nearest point on the body of the car where there is an existing screw. Could tell no difference.

Hi-Q Antennas (the manufacturer) makes an awesome quick disconnect that's about 2" in diameter and requires something like 60 pounds of force to engage/disengage. Easy to go through car washes, etc., and it's not obvious there's even a disconnect there.

As to being rugged... twice I've forgotten to remove the whip and driven it into the garage. Both times it bent the stainless steel whip a perfect 90 degrees, about four inches above the threads. The rest of the antenna never knew the difference. I doubt you could do that with ANY other screwdriver and not be picking up the pieces off the floor. Customer service is also awesome.

Stealths are among the most expensive screwdrivers and may not be worth it if you're not a dedicated user of 40 and 75 meters. By the time you get up to 20 meters, there just isn't that much performance advantage over less-expensive, less-efficient competitors.

BTW, I'm also using the FT-100D with a ClearSpeech DSP. The 100D's outstanding noise blanker and the CS give me a near VHF-FM sound on any halfway decent HF signal. Background noise is close to non-existent.

Good luck...

Are these the ones with a Motorola 145106 based PLL synthesizer on
it's own board? I have a couple of them (not that I want to get rid of
them). What are your plans for them?

6165. Re: Third party CTCSS Sources

Newsgroup: rec.radio.amateur.equipment
Date: 2002-11-30 16:40:07 UTC
From: Jim Pennell <NoSpam@killspam.com>
Message-ID: <asapla$4jt$1@slb4.atl.mindspring.net>
Source record: 36676
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.equipment

Generally, adding a third party CTCSS board is not difficult. They usually have enough drive so you can use a fairly high value resistor and connect it to the microphone input.

There are a couple of problems....

One problem is, it is not easy to change the PL frequency when you install the CTCSS board inside the radio. You may want to mount it in an external box with a couple of connectors so you can connect the microphone to the box and then a second cable from the box to the 2 meter rig. This way, you have the CTCSS board where you can get to it to chenge the PL frequency. Maybe even set up a selector switch of some sort for the PL frequencies you want.

The other possible problem is a possibility that the very low frequency PL tone might disturb the radio. A unit I modified once injected the audio into the phase lock loop and that was how they FM'd the signal. Trouble was, the PL tone was in the phase lock loop bandwidth. Well..... That's a problem.

Anyway, a CTCSS board is fairly cheap, and it will most likely work for you but be prepared for the possibility. It depends on how the radio was designed.

Absolutely no problem, since the radio is designed for a PL board.

Do not feed the PL into the mic input, most FM rigs tailor the audio
response, the PL should be feed as close to the modulator as possible.
You'll need to determine which pin for the TU3 is the PL tone input.

The biggest problem you will have is setting the PL deviation to
600 or 700 Hz. If you don't have access to a service monitor, the
easiest way is to use a setting just above the minimum setting that
will reliably key the repeater.

I bought recently an Icom IC-2000H radio with the microphone from a widow. The radio is brand new but does not have any manual that came with it. Is there somebody in the group that could scan it and sent it by internet. I searched on the Icom website and had not been able to find it there for free. If you can scan it and send it directly to my personal address, (belisleb@webnet.qc.ca) I would appreciate it very much. Either in English or French would be OK.
Thank you very much
Bernard Belisle

Yup, I'm feeling a bit dumb asking this question, but I'm stumped. I'm rigging a dipole for my Radio Shack HTX-10 10-meter rig, I've already got a 6' copper ground rod driven and have stripped the copper weave out of some coax for a connection. Problem is, where the heck do you attach the ground? Nowhere on the rig or the DC power supply do I see a ground connection, nor does the owners manual refer to any grounding. Do I do without?
Please be merciful. I'm a novice.

One suggestion: we should note that the improperly managed SMTP relays are
extremely irresponsible. This is a prominent mechanism that enables practically
anonymous spam, and it is incredible that so many of those who connect directly
to the internet (unfiltered) are so very irresponsible. I consider my
internet connection equivalent (in a sense) to maintaining a lawn. It
is important to keep the software up to date, and when new weeds
are found (bugs), then it is important to remove them.

I have numerous blocks on numerous IP address ranges, along with aggressive
blocking of domains (whether or not they are bogus.) On my system
that used to get lots of spam, now I only get 1-2 spams every couple
of days. When I detect the spam, and refer to my sendmail logs, I
enter the appropriate information into the block lists. Many/most of
the domain names for email spam are bogus, but the relay source is
most often not bogus. Those who allow such nonsense on their
machines are equally as guilty, but for negligence as the creeps who
spam everyone.

This is a little more tricky for ISPs and more general services, because
I am more willing to block groups of addresses than they might be. Also,
my various blocks include deterrents that make snooping a little less
comfortable than normal services might be willing to employ.

My own practices include checking my system logs quite regularly, and also have a configuration that is adequately different that things like root kits would fail. I'd much rather my systems fail (until the nonsense and exploits are removed) instead of continuing a fail-soft operation that ends up being an obnoxious and irresponsible net-citizen.

That's easy. use one of the screws that hold the case shut or use one of the mobile mount screws. Just put a spade lug on ur ground wire and away you go.

Bingo. And thats probably why arrl.org got pegged.
Any bozo that knows how to use Telnet can hijack any number of unwitting
servers worldwide for a one-time flood of spam. Most server owners wise
up very quickly and can prevent this...but some don't.
A year or two ago the vogue was to cry about Korean spammers, etc but in
2002 the blame should be placed on YOUR indivdual ISP for not having
adequate filtering. As long as there are ISPs operating on the floor of
a cheap apartment in Manila, there will be a conduit for spam.
Attacking the source is futile....the delivery mechanism should be the
subject of attention.
Many ISPs and newsgroup servers are well on the ball these days at
implementing filtering. If you get too much spam they are the entity
which you should complain to. And then there is AOL.

I generally agree with your response (and it is important to be vigilent.) However,
there are alot of people like me who essentially provide their own ISP to themselves,
and the connection to the internet does entail significant responsibility. If
I hadn't been an internet host since about 8yrs ago, and experienced in the
care and feeding, and I am the only real user behind the firewall (I have some
aliases for family members, however), then maintaining the connection
would be less pleasant.

At times, I have considered dropping my internet host, and just doing it the
way that most people do. However, as soon as you connect with variable
IP addresses, and connect through a captive service, then the ISPs will
sometimes do alot of filtering, thereby disabiling potential experiments.

If I wasn't doing OS development (from time to time), or work on distributed
computing issues, I'd most likely reassign my domain name to a service that
just provides email :-).

As it is, I don't normally divulge my personal domain anymore, simply to keep
my life simple. My normal public email is provided through my ISP. However,
my exposure of my private email address in the past (after starting to keep it

quiet a few years ago), still has the effect of receiving nonsense spam. As it is, my ISP that does do some spam filtering, tends to be a little too conservative, and still lets spam though, but also flags the potential spam.

The biggest mistake that I had made, and the mistake was indeed exploited, was that I had left the UNIX 'finger' command open to the world. This was a bad thing, but an interesting side-effect of version skews in early versions of FreeBSD that I was working on was that the utmp file format had changed, and the login names returned by finger were bogus :-). I still get email attempts to those bogus names, and that was over 3-4yrs ago when that problem was fixed.

There are also other approaches for personal anti-spam, including the use of bogus email addresses (like adding something obvious to remove), but accept both the bogus name and the real name. If someone sends email to the bogus address, it replys with the formula for correcting the address (or might even reply with an instruction to simply reply, and the correct address would get the message.) Most spammers tend to bounce the messages to a reply anyway, but that wouldn't be 100% (some spammers might actually read and reply, and then your real email is on a list.) :-(. This just might not work, but seemed like a logical follow on to the situation that I noted above.

John

Keith
If nothing else run the ground wire to the PL259
connector on the end of your antenna coax! You
can make the connection by clamping the wire
under an automotive heater hose clamp that should
do for the ground. If your lucky enough to have a
mounting bracket the screw "normally" grounds to
the frame of the radio but on a Rat Shack who
knows.

Wow... that's quite an order and would require a very long reply. I owned a 900 for ten years, though used it only mobile. I also have a PRO (not II).

My feeling is the 900 was a good, not great, radio... at least for mobile use. The noise blanker was useless compared to a lot of others.

The PRO is a superb radio and the II is improved, though not enough to entice me to replace the original. The DSP filters are awesome and will let you separate signals you couldn't possibly do on the 900. The noise blanker is somewhat effective but nowhere near as good as, say, the Yaesu FT-100D's blanker. The DSP noise reduction system is somewhat effective and quite useful, though can't hold a candle to an outboard unit like the ClearSpeech. Add a CS to the PRO and you have a system that is about as near ideal as it gets.

If there was any disappointment for me with the PRO, it was twofold... The anti-noise tools were not what I had hoped they would be, but then I've never owned an Icom that was nearly as good in this department as the Kenwoods, Yaesus and Ten-Tecs I've had. Second, I was dismayed at how quickly the value of my radio dropped from $2,995 to $1,500 or so. It depreciated faster than any radio I can recall owning.

All that said, my overall evaluation would be that there is not much comparison between the two radios. The PRO is the hands-down winner in my book. It is capable of copying a few signals, under difficult conditions, that my old Yaesu FT-1000D could not copy, and that says a LOT!!

Hope it helps... Ed, W5EJ

Welcome to the club :-) I expect that was because they released the PRO-II so soon. If I had only waited two more months I coulda had a PRO-II. I surely hope the PRO-II will hold their value better (which it probably will unless Icom releases a PRO-III next month).

6230. Re: Icon 756 Pro II vs. Yaesu FT-990

"Value" only means something if you plan to sell your radios every time a new radio comes out.
As for me, I plan to keep my PRO II & PRO till neither one will work and can't be repaired. Then I'll buy whatever new radio ICOM has come out with at that time.

DO NOT attempt to insert the tone at the mic audio input. If the radio is properly engineered, there will be a high pass filter in the mic circuit that will roll off freq's below 300 Hz. You might be able to get enough tone thru the mic input to bring up the repeater, but you will have a number of problems if you go this route. Comm Spec has application notes on their site for most of the popular radios. Download the one you need and follow their instructions. Good luck, and 73

The radio's list price is over $200 dollars. The radio
just recently received a new sale price. The radio is
one of the best monobander 2 meter performers. I believe
that it is the only 2 meter radio that meets the NTIA's
specs for current CAP radio service.

$79 is probably do to the Japanese economic situation.
I think that the economy's deflationary aspects will lead
them to sell higher priced inventory as soon as possible.
The longer that they hold onto something, the worse the
loss will be in real economic terms.

I bought yet another one. The FT1500 is also a great
buy IMHO.

Actually, Kevin is right. I had a schematic for the rig I was fooling
with and I knew that it did NOT have much audio shaping but most radios do
and that has to be allowed for when hooking up a CTCSS board.

I tend to turn my brain off on weekends... Ah well, at least there are
people here to catch my errors.

Absolutely correct advice. Two problems in particular become evident
feeding CTCSS in thru the mic processing chain:
(a) dev limiting will strip the CTCSS off completely, so you will
experience serious "talk-off" problems originating in your Tx.
(If you don't believe me, try it and watch it on a comms monitor).
(b) the dev you get (below limiting) will be a function of frequency,
as a result of the rolloff slope of the high-pass or band-pass filter
in the mic amp.

MOST transceivers have a proper CTCSS insertion point, which is
generally evident from examining the cct diagram. Note also that
tone-sequential calling tones ("Selcall") should be inserted through a
different point to CTCSS, and if there isn't a dedicated point for
this you will need to feed these down the mic chain.

6248. FS: sma-to-bnc custom fit antenna adapter

Newsgroup: rec.radio.amateur.equipment
Date: 2002-12-02 01:22:02 UTC
From: gulyas@earthlink.net
Message-ID: <12235960.0212011722.3b79c3b8@posting.google.com>
Source record: 36509
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.swap,rec.radio.scanner

Do you have a need for a high-quality SMA-to-BNC antenna adapter that
is custom made to fit and protect your H.T. or scanner radio?

Adapter allows you to:
Quickly change antennas to base, mobile or different style use.
Use the more popular and wider selection available of BNC antennas.
Prevent chassis connector wear or from coming loose due to antenna
changes.

Adapter features:
Gold plated contacts with a teflon insulator.
A low profile design with a rubber covering for a factory antenna look.
The rubber base seals to the top of the radio with no spacers needed
for moisture and dirt protection.
The base also provides an excellent support for any length of antenna
or application.
No need to remove adapter once installed to make a quick and safe
antenna change.

Sizes to fit radio models:
Yaesu: VX-5R, VX-7R, VX-1R, FT-50-R, VX-10, VX-150, VX-110,
VXA-100, VXA-120
Icom: IC-T90, IC-T8A, IC-T81A, IC-Q7A, IC-R2
Kenwood: TH-D7, TH-G71, TH-F6A, TH-F7A
Alinco: DJ-V5, DJ-X3, DJ-S40
Standard: C508A, C510A
Radio Shack: HTX-420, HTX-400, HTX-245, HTX-200
Aor: AR-16

Previewed in the May 2000 Issue of CQ Magazine, and the Nov. 2000
Issue of QST Magazine.

$11.95 + $1.50 S+H(One to unlimited)

Baloney. Accepted practice on the usenet (read the faq) is that if
it is being offered on ebay and/or any site where you can go and
bid on it then it should be posted with the beggining of the subject
header should start as "FA:"

Simple.

I know, I know - it's got that stupid "buy it now" deal going - despite
this, you can go and bid on it therefore it is an AUCTION. Duh.

Ken

Steve
I buy and sell on Ebay also, (that's how I found the tuner) but I'm still
amazed at the prices that people ask (& pay) for the stuff on Ebay.
As far as I'm concerned Ebay is a sellers market, but sometimes as
a buyer you can find a good deal there.

I think the best way to be a buyer, in any auction, is to predetermine
the highest amount you would pay for that particular item, and avoid
getting caught up in the emotional "I have to win" mentality. If
someone else wants to pay more than you think the item is worth, let
them.

Hi,
hr is (1) Set of Sinclair P-201g 4 cavity Duplexer w/ Cabinet That I am selling. 24" tall cans X 6 3/4" Dia. with all the Cabes ready to go...just tune to your Freq. Pics of F-201G Sinclair Duplexers.....All Aphenol Connectors & Good RG214 Cable.

P-201 GR

The P-201G bandpass duplexer combines Sinclair's high Q bandpass cavities into a unit of superior performance in the 132-174 MHz range.
These Duplexers are easily field-tunable and feature rotatable lops for selectivity settings other than the performance detailed below for 0.5 dB per-cavity loss. In addition, vernier tuning is provided for fine frequency adjustments. Because of carefully designed temperature compensation, frequency drift over the operating temperature ranges extremely small, typically 0.5 ppm/�C.
These duplexers are available in rack-mounted or cabinet configurations.

For Specifications go to this site.

<http://www.wiscointl.com/sinclair/BaseStation/p201gr.htm>

$550 w\Cabinet
$500 wo\ Cabinet

Will Meet with buyer 1/2 way from Baskin, La.71219
upto 150 miles.

Is anyone here familiar with programming this radio?

I built an interface which seems to be correct. Designed for Yeasu VX-1R. Supposed to work.

I have the software but it does not seem to work. Cannot read stored data.

Don't know why?
